SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

American Seed Trade Association.

The twenty-first annual meeting of the American Seed Trade Association will be held at St. Charles Hotel, Atlantic City, N. J., June 23-26, 1903. Special hotel rates, $3.00 per day. Application has been made to the Trunk Line Associations for a reduction in railroad rates; full particulars will be sent you if obtained. Program will be sent you later.

Atlantic City, the latter part of June, is the most attractive seashore resort in America. We hope to have a record-breaking attendance.

The annual meeting of the Wholesale Seedsmen's League will be held at Atlantic City during and after the association meeting. The day and hours to be hereafter named by President Bruggerhof.

All social features connected with the convention will be announced at the meeting, except that, by request, we announce that it is the intention of Messrs. W. Atlee Burpee & Co. to invite all in attendance to visit "Fordhook" on the Monday following the convention week. This announcement is made believing that all will wish to accept this invitation, and will plan to remain in Atlantic City over Sunday.

We advise members to engage rooms in advance; this may be done by writing directly to the hotel, or by notifying Mr. Walter P. Stokes, president, or the secretary,

S. F. WILLARD,
Secretary.

Superb Pansies.

Henri Beaulieu, Woodhaven, N. Y., is an enthusiast in several horticultural specialties, among which is a strain of pansy seed he imports under the name of Mme. Perret. Mr. Beaulieu claims the best pansy seed known is grown in France, and that the Mme. Perret type is the gem of them all. A sample of this seed was grown by a successful local pansy expert in competition with most of the widely advertised strains offered to the public last Fall, and the conclusion at the present blooming season is that the importer's claims for Mme. Perret are well founded. The seeds had evidently been most carefully selected, as the plants are uniform and compact in growth, well covered with large, highly-finished flowers of the most pleasing and tasteful shades imaginable. The pansy is now so highly developed that intelligent description of the colorings of any but a few well-marked varieties is impossible. One can only say that the range of coloring and combination of bright and pleasing shades is better than in the competing strains, though some of the latter are very good indeed. We grow fair pansies on favored spots on the Rural Grounds, but preferred this trial should be made by a grower of long experience who has always planted the best pansy seed procurable. His verdict is that the sample of Mme. Perret produced the highest average of good blooms of any seeds he has yet tried. It is a good thing to work up a strain of seeds of a popular plant to the highest excellence, but it requires much care and discrimination to keep it up to such a standard. W. V. F. in "Ruralisms," Rural New Yorker.

European Notes.

A considerable change has fortunately come over the weather, crops and trade. Almost directly after my last notes were mailed the drouth was broken by a good steady rain which has continued throughout the week, the temperature rising very considerably at the same time.

The state of the seed crops cannot yet be fully determined, but from all reports it is quite safe to say that there has not been so much damage done as might well have been expected. Cabbages, particularly, have revived well, but those varieties which were planted late show no inclination to run to seed. Turnips and Swedes will have to be "topped," which will strengthen the crop and make it very little later. Peas will be considerably retarded, and the first pods, although not cut off, will be damaged and almost useless.

Great good has been done to the beet crops, and while there cannot be a full crop, a fair crop may be anticipated.

Useful activity in all branches of the agricultural trade is another bright side to the change in the weather.

A somewhat better report may now be added to the above, especially as regards Swedes and turnips in England

SPECIMEN CONIFERS

HIRAM T. JONES, Union County Nurseries, ELIZABETH, N. J.

Mention the Florists' Exchange when writing.

The more delicate varieties have suffered most and will be short; but later and stronger sorts are gaining ground and promise well. Beet crops are keeping better since the rain. Many fields seem thin by reason of the failures, but not too thin for a fair crop to be anticipated. Carrots are in some cases very bad, and some fields have been ploughed up. Endives and lettuces have been kept back by the cold, and where not killed are still too small to plant out, which will make them late; a shortage is expected, but a good deal depends on how the plants left now develop in the next week or so.

Early cabbages have been badly cut down and the crop generally weakened; a full crop is impossible. Later sorts and the more hardy brassicas, such as Brussels sprouts, savoys, etc., have stod the trial fairly well, and ought to be good.

Growers of onions in all districts are more optimistic now, the change having strengthened the plants to a remarkable degree. Radishes have been damaged and cannot be first class; all the same, they are sharing in the general improvement. Salsify and scorzonera suffered slightly, but there will be plenty to supply all demands.

The weather continues warm and rainy; in fact, we are experiencing floods in some districts, but generally all is tending toward a decided improvement in the seed crops.

harles A. Ilgenfritz, Monroe, Mich., President.
S. Lake, Shenandoah, Ia., Vice-President.
rge C. Seager, Rochester, N. Y., Secretary;
. Yates, Rochester, N. Y., Treasurer.

he Summer meeting of the Missouri rticultural Society occurs June 3, 4 d 5, at Perble Springs (Warrens- rg), Mo. An interesting program s been prepared. L. A. Goodman, 0 Warwick, Kansas City, Mo., is sec- ary.

ILWAUKEE.—Warren H. Man- g, of Boston, has been engaged as visory superintendent to the Park ard of Milwaukee, Wis., for a period two years. He will shortly submit ns to the board for the improvement Washington and Kosciusko parks.

Timely Suggestions.

et out all heeled-in stock as soon as es are over. If shrubs, and they are ch sprouted, cut them down almost the ground, ram the soil in well, and ter them.

n this part of Pennsylvania we have n without rain for a month. While es are not suffering, seed beds are, d seeds will not germinate unless the rface soil is kept damp.

Elm, red and silver maple seeds are e now. Sow them as soon as possi- . Nice plants will result by Fall. If pt over until Fall, the seeds are un- tain as to growth.

Hardy stock in greenhouses should be t outside at once. Put it in a partly eltered place for a week or so, as dden exposure to sun destroys the iage, weak from inside growth.

Vines in pots should have neat stakes t to them as soon as the vines com- nce to grow. A vine grows fast when pport is given it; and neatness of pearance makes sales.

Small fruit trees intended for selling ould not be permitted to waste en- gy on producing fruit. Pick off all t a very few. Shoots will then be ade, which will pay better than fruit, ding to the price to be asked for the ock when selling time returns.

Evergreen cuttings in boxes, rooted rough the Winter, need attention. If anted out, their small size is against eir battling with the Summer suc- ssfully. Better to fix up frames ansplanting into them, or else pot e cuttings looking to planting them t next Spring.

Examine all stock for scale and other sects, so as to start the season with ean stock. Whitewash will kill scale sects. A handful of sulphur in a cketful is a help toward healthy ees.

The wood of lilacs looks so much ike that unless labeled it is impossi- e to know the varieties when not in wer. Label them before the flowers de.

Lotus Corniculatus.

The pretty little perennial, bird's foot efoil, Lotus corniculatus, a familiar ant in meadows in Europe, does not cur in a wild state here, but as a cul- vated plant it is very much at home. or rock-work uses it is valuable, its reading habit fitting it for positions here a low-growing subject is re- ired. The flowers are bright yellow, nged with orange, produced in heads six to twelve on a stalk. It is in wer with us in May, and for some me later; and in Europe it can be und in bloom at almost any time dur- g the Summer.

Golden Norway Spruce.

Many of the golden and variegated- aved plants, while unattractive at me seasons of the year, are most autiful at others, and in this class the golden-leaved Norway spruce. ust now, with its young growth about rfecting itself, it presents a lovely ppearance, almost a sunset color, and ere it to keep up this appearance uring the selling season, there would e no end to the calls for it. But to- ard Midsummer the golden color fades too light a hue for beauty, so that e tree will be planted chiefly for its tractive face in Spring.

All the forms of spruce are increased y grafting, usually performed on pre- ared stocks in doors, in greenhouse or ame, where moisture can be kept up hile the union of parts is going on.

Veronica Teucrium.

The genus veronica is known for the large number of fine blue species it contains, and of these, one after the other, there are some in flower from early May until September. One of the prettiest of this season is Veronica Teucrium. Its flower spikes are about a foot in length, and the blue flowers so profuse that hardly a bit of foliage can be seen—nothing but a sheet of blue. What a pity some of these blue-flowered perennials are not constant bloomers! What a change it would make in our bedding plans could we use this veronica in our make-up!

Mollis Azaleas.

Year by year sees the variety of colors in the Azalea mollis increased. From the yellow and the flame-colored, which were the first of their kind to be seen here, there are now dozens of shades of color. But, so far, importers of them receive them under two colors, viz., yellow and red Azalea mollis. Among the yellows are shades from the deepest yellow to white. The reds are still mainly flame-colored, but there are some of a darker color than others. The time will come when the various shades will be kept distinct, as is now done with the Ghent azaleas.

The ideal situation for all azaleas is a partially shady one—not one overhung with trees, but one which, while open, is in the shade part of the day, preferably in the afternoon. Such a place furnishes coolness at the root, and is usually more moist than when exposed, and fits the azalea exactly. Often by mulching, the surface of the ground can be kept moist, even when the plants are in the full sun, but when thus exposed the flowers are less lasting than when they are in partial shade.

Yellow-Flowered Magnolia.

Although it is now over 100 years since the Magnolia cordata was introduced to cultivation, it is one of the rarest trees in collections to-day, and this in spite of the fact that it is the only yellow-flowered one known to collectors. One reason for this may be that in many cases what has been sent out for it has proved nothing but M. acuminata. It may be said that in a general way it has no resemblance to M. acuminata, though older botanies make it but a variety of this. What makes it distinctively different to a beholder is its lovely yellow flowers. And then, it blooms two weeks earlier than M. acuminata, and it has leaves downy on the underside, while the other has them smooth on both sides.

Sometimes M. acuminata flowers have a faint trace of light yellow, and those of M. Fraseri are of a canary yellow, but neither of these approach the depth of yellow displayed by the blooms of M. cordata. Its petals are of a light green as they open, taking on the yellow color as they expand, until, when fully matured, they are of a rich golden color.

It has the reputation of making quite a large tree; therefore, to enjoy its flowers the better, it should be treated as a large shrub, as is done in the case of M. Fraseri. Then its deep yellow flowers, and the canary yellow, sweet-scented ones of M. Fraseri are seen and enjoyed. Keeping them topped when young and afterward makes shrubs of them.

NEW PEDIGREE ROSES.

Send for description and colored plate of our Six New Climbing Roses. These originated in our own collection by careful cross-fertilization, and are unquestionably superior to anything of their class.

Edwin Lonsdale, pale lemon-white.
Wm. K. Harris, pale flesh color.
Wm. F. Dreer, creamy-white, pink edging.
Prof. C. S. Sargent, rich yellow and buff.
Robert Craig, yellow, shaded with apricot.
John Burton, delicate peach color.

All fragrant, very double, undeniably hardy and strong growers.

New White CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, 75c. each, $7.50 per doz., $50.00 per 100.

Send for List and Prices of 50 other leading varieties of Cannas.

New Crimson Rambler, "PHILADELPHIA"

Flowers larger, more double, do not fade white, more durable, brighter color, not subject to mildew as Crimson Rambler is. 2½ in.

$1.50 per doz., $10.00 per 100, $80.00 per 1000.

THE CONARD & JONES CO., WEST GROVE PA.

Mention the Florists' Exchange when writing.

If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN,** although it has been cultivated many years, is still scarce. As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there will be no change in price this season.

We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

Mention the Florists' Exchange when writing.

Nephrolepis "Anna Foster"

Is rapidly growing in popularity among those careful growers who have been watching its progress during the past few months. Large specimens are exceedingly graceful.—American Florist, April 4.

Beautiful plants, 3-inch, $20.00 per hundred, now ready.

20,000 Boston Ferns now ready at $25.00 per 100, cut from bench. Orders booked now for small Boston Ferns for Summer delivery.

Kentias, very fine, $50.00, $75.00, $100.00 per 100.

Red Ribbed Rubbers, 2 ft., $6.00 per doz.

Year Book, 1902 590

The schedule of premiums for the annual meeting of the American Rose Society, to be held in Philadelphia, has been prepared, and will shortly be published. The amounts offered as prizes have been doubled in nearly all the classes.

The Horticulture Palace at the St. Louis Exposition in 1904 is the only structure that will have color applied to it. The beautiful color scheme which has been worked out for this building will be in complete harmony with the splendid landscape effects that will be produced by the installation of the horticultural exhibits surrounding it.

Owing to the interruption of the mails on account of Memorial Day, May 30, and with the desire that our subscribers shall receive their paper at the regular time, all correspondence and advertisements for issue of May 30 should be in hand by WEDNESDAY, MAY 27, to facilitate earlier mailing.

A Farce at a Flower Show.

For three consecutive years the New York Botanical Garden has offered as a prize to be awarded by the Council of the Horticultural Society of New York, at the annual exhibition of that Association, $50.00 for "The Best Horticultural Novelty in plant, fruit, flower, or vegetable—that is, anything distinct and not previously in general cultivation in America." That the absurdity of such a competition is patent to all concerned—excepting the donors of the premium—is evidenced by the genuine lack of interest shown in the contest by the trade and the horticultural public in general. This year, only two exhibits were placed in competition—a double-flowered begonia, and a palm, the latter being awarded the prize. The winning palm was a Phœnix humilis Rœbeleni, which plant has been in cultivation—in England, at least—since 1890. And, if we mistake not, it can be found in several private collections in this country at the present time.

The fact of its being "not previously in general cultivation in America" may bring it within the purview of the conditions governing the competition.

It is not so much on account of the fact of general or non-general distribution of the winning plants in the United States that we take exception to the awards made now and previously in this class and by the Council of the Society in question, as it is that absurd conditions of award like those under consideration bring men with good intentions under the ban of ridicule, and burlesque the whole judging scheme. For the honor and dignity of the Botanical Garden and those endeavoring to carry out its impossible of proper fulfilment desires, we would respectfully ask that some more common-sense problem be presented to the judges for solution. We firmly believe that it would better carry out the intent of the donors of the premium, draw out a larger competition and an interest therein, and do more for the cause of horticulture to bring the contest within the range of possibility of satisfactory decision, by offering the prize in alternate years for the best novelty in plant, in fruit, in flower, and in vegetable, respectively.

The contest as it stands may to some appear novel, unusual, and entertaining, but its very uselessness entirely overbalances the extraordinariness of its delightful and delighting freakishness.

The Yearbook for 1902.

The Yearbook of the U. S. Department of Agriculture for 1902 is in press and will be issued early in June. It is a volume of about 900 pages, of which 124 pages are devoted to the annual report of the Secretary of Agriculture, 534 to miscellaneous articles, 200 to the appendix, and about 30 to the index. It is illustrated with a frontispiece, 71 half-tone and 16 colored plates, and 62 text figures.

Among the miscellaneous papers, which cover a wide variety of subjects, those of immediate interest to our readers include: "The San Jose Scale, Its Native Home and Natural Enemy," by C. L. Marlatt; "Industrial Progress in Plant Work," by B. T. Galloway; "Top Working Orchard Trees," by G. Harold Powell; "Some of the Principal Insect Enemies of Coniferous Forests in the United States," by A. D. Hopkins; "The Agaves: A Remarkable Group of Useful Plants," by E. W. Nelson; "Bacteria and the Nitrogen Problem," by George T. Moore; "Improvement of Cotton by Seed Selection," by Herbert J. Webber; "Grape, Raisin and Wine Production in the United States," by George C. Husmann; "Flaxseed Production, Commerce and Manufacture in the United States," by Charles M. Daugherty; "Promising New Fruits," by William A. Taylor; "Plants as a Factor in Home Adornment," by L. C. Corbett; "Practices in Crop Rotation," by George K. Holmes; "Improvement of Corn by Seed Selection," by C. P. Hartley; "Fertilizers for Special Crops," by A. F. Woods and R. E. B. McKenney; and "Cultivation and Fertilization of Peach Orchards," by M. B. Waite.

The edition of the Yearbook is 500,000 copies, of which only 30,000 are assigned to the department for its use, which precludes any miscellaneous distribution by the department itself, its own regular correspondents and others co-operating with the department or rendering it some service being far more numerous than the number of Yearbooks at its disposal. The bulk of the edition, 470,000 copies, is reserved for the use of senators, representatives and delegates in Congress, or about 1,000 copies to each member of Congress.

All persons, therefore, other than crop correspondents, desiring copies of the Yearbook, must make application to their senators and representatives in Congress instead of to the department. Crop correspondents will please apply directly to the statistician, and remember that, while some Yearbooks may be delivered in June, the bulk of the books will not be available until after the first of July.

Los Angeles Floral Parade.

The parade at Los Angeles, Cal., which was viewed last week by President Roosevelt, surpassed anything of its kind ever before witnessed in the magnificence and wealth of its floral splendor. Women, children, men and boys, ponies and pony traps, automobiles, bicycles and every other imaginable motor vehicle were gaily bedecked with flowers, drawing forth expressions of delight from Mr. Roosevelt and his suite.

One of the most elaborate floral pieces of the day was the float which bore as its title, "Organized Labor." Mounted on the immense wheeled platform was a sphere twenty-seven feet in circumference, representing the earth. With beautiful precision the maps of the two hemispheres were outlined and solidly filled in with carnations of different hues on oceans of Asparagus plumosus. On the side which appeared toward the President in passing were North and South America, the United States marked out in yellow daisies, Mexico and Canada in red carnations, with different sections of South America designated in red, pink and white carnations.

Down in the southwestern corner of the map of the United States was planted a tiny edition of the Stars and Stripes, representing Los Angeles. The Eastern hemisphere was carried out in carnations of different hues. At the four corners of the float were floral emblems designed as symbols of the title under which the whole conception appeared. On the right front corner stood a plow, the tongue and handles composed entirely of pink carnations, with the plow shaft done in white carnations, the whole outlined in smilax. On the opposite corner appeared an anvil composed of the deepest red carnations, placed upon a pedestal of the same flowers in white. Lying open on a stand of greenery on the left hind corner was represented an immense book, the leaves fashioned in white carnations, bound in rich red blossoms of the same. The right rear corner supported a beautiful anchor done in white carnations, the points tipped in red blossoms, and the whole wound with smilax. The body of the float was done solid in carnations of different hues, with the title written in white blossoms, on either side, flanking a portrait of the President. Thickly festooned over this were strings of sweet peas, with a bank of red tiger lilies running around the top. The outfit was drawn by six white dray horses in red harness, wearing plumes of Fiesta hues.

Following came the exquisite display of the Ancient Order of United Workmen, exhibiting in its entirety 23,000 white carnations and 250 strings of smilax. From the center of the float rose a pure white pyramid of carnations, measuring eight feet at the base and six feet in height, bearing, in other colored flowers on its four sides, emblems of the organization represented. On the front and rear appeared the anchor in red carnations, with blue ropings of cornflowers, and on the front and rear the heart, done in pink carnations, inlaid with a tiny anchor in the blue of the cornflower. Below the emblems, written in cornflowers, appeared "A. O. U. W." From each corner of the float rose smilax-bound pillars holding an arch work of lattice, bearing in the air above the dome two white doves in flight in opposite directions, and one on each of the four sides of the dome, all carrying white streamers in their bills, strung back to the flower-covered lattice. Pendan from the center arch was an exquisit anchor of red and white carnations an blue cornflowers. Four footmen i white and blue sailor suits and cap escorted the float, which was draw by four black horses in white harness and a similarly-garbed attendant rod by each pillar. Three living symbol of the sentiment and purpose of the organization—protection to widows an orphans—appeared, seated at the rea of the flowery pyramid.

The Afro-American citizens of th city entered a float resplendent wit flowers, and received third prize i their entry class. A few items of thei display were 12,000 carnations, 6,00 sweet peas, 2,000 roses and 3,000 marigolds. From the center of the floa drawn by four black horses in whit harness, rose a beautiful floral piec representing the Stars and Stripe measuring 5x10 feet, flowing back ove the float from its staff in front. Th stripes were made with red and whit carnations, the field being of blue cornflowers, dotted with white sweet pea for stars. Red, white and blue streamers flowed from the top of the staf The sides of the float were banked wit white carnations, with a floral shiel of national colors, at each corner dor in carnations and cornflowers. Th white carnation banks were rimme thickly with red and pink sweet pea Front and rear were solid masses marigold. Below the carnations c either side were layers of Marie Her rietta roses. The marigolds were burie in banks of fern leaves and Asparagu Sprengeri, and bunches of French gra decorated the coping all the way roun In the center of either flank, framed red carnations laid on sago palm leave was a portrait of the President. Th halyard of the flag was a rope of snov balls.

A beautiful scene was that presente by the Park Commission float, repr senting a glimpse into one of the pul lic garden spots of the city. In th center of a plot, laid out in miniatu walks, bridges and flower beds, sto literally a house of blossoms. It wa constructed of myriad flowers of diffe ent varieties, chief among them bei the brilliant-hued geraniums, whi carnations, roses, sunflowers a daisies were in profusion through t miniature "grounds." The flowe Summer-house was occupied by fo little children. They appeared to be play in the garden, and the effect w most pleasing. The garden on whee was thirty feet long, and was design and built, with the aid of members the park force, by Superintendent L Grande and W. B. Jarrett, ex-sta carpenter of the James Neill Compan A driver in high-peaked sombrero he the lines over six big white horses red harness, escorted by four attach of the Park Commission in khaki un forms. The sides of the floats we banked with varicolored geraniums squares and oblongs, bearing stars sunflowers and other blossoms. N less than 30,000 blossoms were used this attractive exhibit.

Obituary

Henry Fountain.

Henry Fountain, florist, of Middl town, Conn., died last week. The ir terment was in Pine Grove Cemeter

Robert Liddell.

Robert Liddell, secretary of the firm Peter Henderson & Co., New York Cit died on Thursday evening, May 21, his home, 82 Oak Street, Jersey Cit after a short illness. Mr. Liddell wa born near Glasgow, Scotland, 75 yea ago, and had been in the service of Pete Henderson & Co. since 1873. He was man of strict integrity, faithful unt death, as one may term it, and died a he wished to die, practically in the ha ness. He was held in very great esteer by the Messrs. Henderson, who valued h services most highly.

His wife pre-deceased him. One of h daughters is the wife of John Birnie, th well-known grower of West Hoboke N. J.

The funeral services will be held th Saturday evening at his home in Jerse City.

Reflections on Current Topics.

MR. EDITOR: I was pleased to notice the remarks of your Cincinnati correspondent in regard to electing young men to the offices in the local florists' club. That is a step with which I am entirely in accord, for two reasons. First, to permit those who have borne the burden and heat of the conflict to date to rest on the laurels they have won. Secondly, for the greater encouragement and broadening of our young men. These are days when youth holds sway; active days when to keep up with the march of progress much vim and energy are demanded, and must be supplied. This holds true as well in the case of horticultural societies as it does in all lines of business. The men who so ably directed these associations in their formative period are not now "so young as they once were." The strenuosity of the times falls heavier upon them than on their more youthful brethren. They need a rest, and should get it. To retain them themselves and the societies they represent are likely to suffer. I am a patriarch myself, and I know.

Besides, an office that "comes easy" to a man from year to year is not apt to have instilled into its work the same application and push as when conditions are different. Old war horses are inclined, also, to become staid, to have set ideas, many times at variance with progress. Youth bubbles over with festiveness, with originality, with ambition—qualities which guided and directed by the mature wisdom of experience are bound to make for advancement.

I would just cite a case in point—and I do so in no spirit deprecatory of what has been accomplished—viz., that of the Chyrsanthemum Society of America. With younger men in office come revolutionized methods, which, so far as indications go, augur well for the development of that society's work, and a greater public interest in that work. "Young men for action; old men for counsel," is a trite saying that seems to fit this case. We need both. But the younger element should now have its inning in office to better cope with the exactions of the age.

Some time ago my friend and fellow-agitator, W. N. Rudd, advised us of a relationship he claimed with the mule. The following lines from the St. Louis Globe Democrat tend to show that the animal in question possesses points of which any relation of his (including W. N. R.) need not be ashamed:

The mule—he is a gentle beast;
And so is man.
He's satisfied to be the least;
And so is man.
Like man he may be taught some tricks;
He does his work from 8 to 6;
The mule—when he gets mad he kicks;
And so does man.

The mule—he has a load to pull;
And so has man;
He's happiest when he is full;
And so is man.
Like man he holds a patient poise,
And when his work's done will rejoice.
The mule—he likes to hear his voice.
And so does man.

The mule—he has his faults 'tis true;
And so has man.
He does some things he should not do;
And so does man.
Like man, he doesn't yearn for style,
But wants contentment all the while.
The mule—he has a lovely smile;
And so has man.

The mule is sometimes kind and good;
And so is man.
He eats all kinds of breakfast food;
And so does man.
Like man he balks at gaudy dress
And all outlandish foolishness.
The mule's accused of mulishness;
And so is man.

JOB.

New York.

The News of the Week.

His friends in the trade will hear with regret of the withdrawal from business of Rudolph Asmus, New Durham, N. J. Mr. Asmus has been known as a grower for the New York market for a good many years and has gained for himself an enviable reputation for his straightforwardness and his honesty. His health has been very poor for several years, but is better now than it was, and it is to be hoped that relief from business cares will prove a source of benefit to him. Mr. Asmus has disposed of his greenhouse property to H. Schoeltzel, who is a competent grower of palms, ferns and decorative plants, of Union Hill, N. J., and who will devote the newly acquired establishment to the same class of stock.

A portion of the large store of J. M. Hodgson, 71 Fifth avenue, has been leased to a firm of real estate brokers.

The Manhattan Supply Co. has moved its warerooms from Twenty-third street to 440-442 Eleventh avenue.

Notwithstanding the unusually warm weather we had on Tuesday, the auction room of Wm. Elliott & Sons was crowded with buyers, and the demand for stock, especially coleus, geraniums and cannas, was good, the prices realized being extremely satisfactory. This firm of auctioneers announces a sale of fine specimen palms to occur on Tuesday, June 2. These palms are from the well-known establishment of David Clarke's Sons, who find it necessary to dispose of them, as the firm is vacating its premises on the Boulevard. The sale will be at the usual time and place—54-56 Dey street.

H. C. McKnight, who has been conducting a plant department in the store of Simpson, Crawford & Co., has discontinued the same, the advent of warm weather and poor facilities for the keeping of plants in the store making this course necessary. We are informed that when the new store of the firm named above is finished (which is to be erected at the corner of Fourteenth street and Sixth avenue) greenhouses will be built on the roof, and a first-class plant department will be maintained.

The many florists situate around Greenwood Cemetery are having a very difficult proposition to contend with this Spring, owing to the continued drouth. There has been no rain for several weeks (the last good shower was on April 12) and the soil is in no fit condition to receive tender bedding plants. In the bedding out done the plants have had to be kept watered regularly to keep them alive, and the added expense thus entailed makes a serious inroad on the gardeners' profits. Most of the florists are advising their patrons to defer planting for a few days, with the expectation that rain may come in the meantime. Without rain, there will be more work to be done for Memorial Day than can be handled conveniently in the time given.

While it can safely be said that the style of gardening known as carpet bedding is not so much in favor nowadays, there is no appreciable decrease in that form of bedding, so far as cemetery work goes, and the florists around Greenwood all cultivate a vast quantity of low-growing plants suitable for that purpose.

David Clarke's Sons are now occupying their new retail store on upper Broadway. The firm has also purchased a piece of property in the Bronx, and will remove its growing establishment to that borough.

The thermometer is climbing among the nineties day after day, and the retail flower business is having a forced vacation.

There is some talk of an early closing movement among the wholesale dealers, but whether or not this will materialize we are not in a position to state.

One of the happiest men in the town is George Bradshaw, the occasion of his bliss being the birth of a daughter at his house on Wednesday night. Mr. Bradshaw has three sons. Mother and daughter are doing well and the papa is wearing a "smile that won't come off."

Stephens Bros., the Bermuda bulb growers, report that the crop of Lilium Harrisii bulbs for this season's delivery will be much smaller than was the crop of 1902.

Alfred Bridgeman, founder of the seed firm which bears his name, died at Newburgh, N. Y., May 20, aged 85 years. He was connected with many financial institutions and philanthropic societies.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange will publish every week voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

R. Vincent, Jr., & Son, White Marsh, Md., say: "We would again call the attention of all up-to-date florists and nurserymen to our collection of hardy Pompon chrysanthemums. The demand for these is greater than ever before, and will be still larger in the Fall, the plants to be used for filling in beds after the coleus and such stock following it begins to look bad."

L. H. Foster says: "The Anna Foster fern is a female frond plant, reproducing 100 to 1 in a very short time, making an exceedingly profitable fern to grow. The kind words I am every day receiving show that it will be soon the most popular fern on the market."

BRIEFS FOR BUSY FLORISTS.

PROPAGATING.—The demand for bedding plants always extends well into the month of July, and it pays to keep right on putting in cuttings of all the quick growing plants.

Sowings of seed of such annuals as stocks and asters can also yet be made, and they will make nice material for late planting.

PLANTING IN VASES OR URNS.—The filling of vases with plants for the Summer will soon be commenced, and, as the success or failure of this branch of gardening depends a good deal upon the character of the soil used in the vases, some care must be exercised in regard to soil conditions. It is always best to use soil fresh from the compost heap for such purposes, because in a vase a lot of plants have to be grown within a very limited area, so far as the roots of the plants are concerned. See that proper drainage is provided for, and there will be no complaints at the end of the season about the plants in these vases not growing satisfactorily.

STOCK PLANTS.—The list of stock plants required for another year should be made out at this time, and these subjects should be planted in the home ground at once. If this matter is left till the rush of the selling season is over the chances are that many things will be sold out entirely, necessitating the purchasing of other plants for stock purposes.

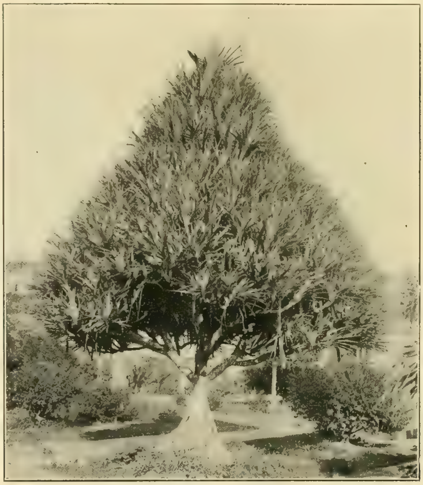
CANNAS that have got well started in the pots can, if room is needed, be taken from the greenhouse and placed in some sheltered position outdoors, where they can have protection from frost if necessary. They will be all the better for being gradually hardened off in that manner. If they have been started in flats, however, they had better be potted up singly for a week or ten days before putting them outside.

Pandanus Utilis.

Those who have not seen the screw pine growing in tropical climates would hardly recognize the one we illustrate as being the same species they have been accustomed to see in greenhouses here, grown in tubs. This magnificent specimen inhabits one of the public parks of Bermuda, and is about 25 feet in height. How perfect is its shape! showing what the tree will do when conditions are right for it. There are no frosts in Bermuda, and in the Winter season the temperature ranges from 60 to 75 degrees. In Summer it is very hot, and the surrounding sea creates a moist atmosphere, which, evidently, suits this plant. This particular species, P. utilus, is a native of Madagascar, where it sometimes reaches a height of 60 feet, forming a large tree.

Referring to the roots, which appear above ground, Nicholson says: "The plants always have a disposition to raise themselves out of the pots, in consequence of the direct downward course which the roots invariably pursue."

JOSEPH MEEHAN.



PANDANUS UTILIS IN BERMUDA.

Gardenias for Winter Flowering.

Since the gardenia has sprung into popularity, the old method of pot culture has been largely superseded by cultivation in benches; but if growers will take the trouble to carefully lift the plants that have done service for a season in the benches, and pot them into 8 or 9-inch pots, they will find that they will amply repay the labor and trouble by supplying flowers much earlier than they can be had from the benches, often beginning as early as the end of August and flowering more or less through the Winter, at which season they are of much greater value than they are when the rush of flowers appear on the benches, which is not usually until the month of February.

The first essential to successful culture is the procuring of good plants. To secure these the cuttings must be struck not later than the middle of February, or just as soon as the new wood is sufficiently ripened. It is poor policy to use wood when too soft. Sharp, clean sand is necessary, and a propagating case where a bottom temperature of 70 degrees can be maintained will be found a suitable place to start the plants. They should never be allowed to suffer for want of plenty of both bottom and atmospheric moisture; and shading from strong sunlight must, of course, be provided.

With suitable surroundings, rooting should take place in about three weeks; but it is better to leave them a few days longer in the sand rather than move them before they are well rooted. Thumb pots are large enough to start with, and a free, finely sifted soil should be used.

A good compost for this first potting is one made of two parts loam, two parts leaf mold, and one part of clean, sharp sand. After potting the plants will be benefited by being put back in the propagating bench (the pots being plunged in the sand) for a few days until they have taken hold of the new material, after which they can be removed to a lighter situation, and less humid atmosphere. Frequent and thorough syringings are necessary from start to finish, to keep the plants free from insect enemies. Mealy bug and red spider are the most troublesome.

From the middle to the end of April the pots will be sufficiently filled with roots to require a shift; this time a 3-inch pot will be necessary. The compost can be the same as for the first potting; only a little old, well-rotted, finely sifted cow manure can be added to advantage. Watering must be carefully done while the plants remain in pots. If an over-supply of water is given, it will quickly tell on the color of the foliage. Yellow leaves are a sure indication of careless watering.

About the end of May, or beginning of June, the plants ought to be large enough to plant in the benches. A bench about six inches deep is, I think, about right. This depth will allow of ample drainage, which should consist of about two inches of broken brick, or old lime rubbish. Over this a light covering of finely broken sod will help to keep the drainage free. I have seen sphagumm moss employed, but it is too retentive, and I would not advise its use.

I may also state here that the bottom of the bench should consist of narrow slats, with ample spaces between to insure the free passage of water and also give the air a chance to penetrate through the soil. Three inches of soil is quite sufficient, and, I think, setting the plants in little ridges is a good plan, as it keeps the soil from getting too wet just around the neck of the plants. In planting, make the soil moderately firm; but hard packing should be avoided. A good compost for the benches is four parts old sod soil, two parts leaf mold, one part sharp sand, one part old, well-rotted cow manure, and one part finely broken charcoal. This latter is very essential for keeping the compost sweet; and, should the soil employed be of a retentive nature, a little more charcoal had better be added.

Full sunshine should be allowed through the growing season, and, as before stated, abundance of atmospheric moisture and the free use of the syringe.

Evaporating pans should be used when hard firing is necessary; and through the dull Winter water should be sparingly given. With a moist atmosphere and the plants syringed three times a day, it will be found that at that season little water will be needed. When the little white roots appear on the surface, a top dressing may be given, which should consist of the compost as recommended for benches, with a little more manure added. This should constitute all the feeding necessary, until the month of February, when the plants are flowering freely, and the benches well filled with roots; then a little weak liquid manure may be used to advantage. At this stage, if the house is very bright, a slight shading will help prevent the flowers from burning.

The flowers should be cut in the morning before the sun strikes them, and kept in a cool place. If kept warm, they don't last long.

Of the several varieties grown, G. Veitchii is the most suitable, being freer in flowering and of more compact growth than any of the others. A night temperature of about 65 degrees, with a rise of from 15 to 20 degrees by sun heat, will be found to suit the requirements of the gardenia.

SCOTIA.

English Horticultural Notes.

NARCISSI AND OTHER BULBS.—The English trade in Dutch bulbs is vast, and is likely to increase enormously. Owners of private estates and superintendents of public parks and gardens everywhere throughout the land, are yearly developing the practice of "naturalization" of daffodils, tulips, muscari, squills, chiondoxas, crocuses, snowdrops and such other familiar Spring-flowering genera. Naturalization simply means the planting of thousands of the various kinds of bulbs informally in grass lands, shrubberies, copses and woods. You can easily see how such an elaborate system of planting calls for a very great demand, and the bulb merchants are finding it hard to supply the call for certain varieties. Those mostly sought are the following: Horsefieldi, Emperor, Empress, Princeps, Obvallaris, Sir Watkin, Frank Miles, pœticus, Telamonius plenus, Stella, Barri conspicuus, Burbidgei, William Goldring, moschatus albus, Ard Righ, Von Sion, Leedsii, C. J. Backhouse, Nelsoni Major, and the jonquil. From the contents of the American gardening papers it would seem that daffodils are not greatly cultivated in the United States; but surely you have enormous possibilities for a great trade in the bulbs of this exquisite genus, and I live with hopes of seeing that trade become a reality.

A CHINESE TREE OF DISTINCTION.—Those of your readers who are specially interested in trees and shrubs will find a number of the Veitchian novelties (recently introduced from West Hupeh, a province of Central China, by the firm's collector) worthy of consideration. In the present note I am calling attention to a tree that attains a height of 30 feet, named Davidia involucrata. The foliage bears a close resemblance to that of the linden or lime trees (tilia), but the outstanding characteristic is the huge white bracts, as large as a man's hand, which are borne in pairs at the tips of the branches. The effect of a full-grown tree, with its immense wealth of white "flags," swaying in the breeze, must be very striking in a landscape composition. Messrs. Veitch & Sons, of Chelsea, London, have a stock of seedling plants of it.

A BLUE EVERLASTING PEA AND AN ORANGE-COLORED PAEONIA.—Lovers of herbaceous plants are pretty generally acquainted with the pea, popularly called "Lord Anson's Blue," and botanically, Lathyrus megallanicus. But this is quite a pale blue pea, and the "blue Everlasting Pea" cited above is a newcomer named Lathyrus pubescens, and was shown by the president of the Royal Horticultural Society at a recent meeting. The flowers are distinctively lavender-blue, rich and effective, and are borne in large racemes in the way of L. latifolius, the Common Everlasting pea.

Then the new pæonia (which received the highest award, viz., a first-class certificate, R. H. S., London), is, indeed, a magnificent acquisition. The flowers are small (three inches in diameter) but that is its only fault. The substance of the petals is stout and good; the form is open and strong; the boss of stamens, prominent; and lastly, the intense golden yellow color is very satisfying. As a breeder for the innumerable varieties of Pæonia japonica, P. albiflora and others, this new species (named P. lutea) will be welcomed by all devotees of the flower. The introducer is W. E. Potten, Camden Nurseries, Cranbrook, Sussex, England.

AMARYLLIS (or Hippeastrums) are all but past for another season. Messrs. John Cowan & Co., of Gatacre, Liverpool, and Messrs. Veitch, of Chelsea, are the specialists. A few varieties have been certificated as usual, and decidedly the finest of these is Veitch's Appleblossom, of a sweet pink color, good size and perfect form. The seedling varieties, however, are nearly all meritorious, and general fanciers of this flower simply rely on a selection from the extensive nursery stocks. Mr. Joseph Chamberlain, M. P., has recently become enamored with the charms of the fair amaryllis, has erected two new houses for his bulbs, and is personally directing the cross fertilization of the varieties. Two other notable admirers of the genus are Lord Rothschild and Captain Holford, the King's equerry. The example of these gentlemen "sets the fashion," and others follow. This is obviously advantageous to the horticultural trade.

ROSES.—The Dorothy Perkins rose, sent out by Mr. Potten, whom I have named already, is selling fast. This gentleman has grown-on a number of plants to the specimen stage, and is exhibiting these in full bloom, literally clustered with bright, rosy-cerise flowers; and the lady visitors to the Royal Horticultural Society's meetings go into raptures at its beauty. While in Birmingham recently I was much impressed with the extreme elegance and refined loveliness of the Wild River rose, as they called it, better known s the Banksian. Importations are ade from the Riviera, and our grow- s do not use it as a forcing subject. he little, round, pale tea-yellow flow- s are admirably decorative.

SPANISH IRISES are pouring into ovent Garden market at the present me, and selections of the varieties, in rious colors, are largely used by the tail florists in their floral designs.

THE CHANCES OF ORCHID SPEC- LATION.—As an instance of the luck hich occasionally attends the pur- hase of orchids at auction sales, men- on may be made of a magnificent dontoglossum crispum recently cer- ficated (F. C. C.) by the R. H. S. f London. The variety is named Per- mmon (after an English race horse) nd was bought in a job collection at sale, the price for the piece being 18 ence. Now that the plant has flow- red, and its great excellence admitted y experts, prices from £1,000 upward ave been unavailingly offered, but the mateur owner refuses to part with it. nother O. crispum variety (O. c. Cook- oniæ), also owned by a private grow- r, could have brought £1,500 recently, ut here again the owner would not ell. Send us some of your gems! There eems to be a demand, if they are suffi- iently good.

KALANCHOE FELTHAMENSIS.— his is one of the finest greenhouse lants ever certificated. It is a hybrid rom K. Bentii and K. flammea (the atter already well known), and though t closely resembles the former or male arent, in appearance and habit, it has he bright scarlet cymose inflorescences f K. flammea. The flower heads are rect and spreading, the primary stalks eginning to branch at about six inches p the stem, and below their point of ranching the fleshy brownish metallic eaves are closely arranged. Messrs. Veitch & Sons, of Chelsea, received a irst-class certificate for the novelty n May 5. They have named it after heir new branch nursery (Feltham), where the stock plants are grown. If his new plant grows half as freely as K. Bentii, it will speedily become an occupant in every establishment. I an give it the fullest recommendation.

J. HARRISON DICK.

CARNATIONS.

The Severe Dry Spell.

The unseasonableness of the weather will necessarily alter the treatment of carnations, and if the drouth continues the effect on the young stock will be serious. We have been having July weather for the past two weeks without the thunder showers which are usually so plentiful during that month, and the farmers especially are heavy losers by the continued dry spell.

PARTIAL VIEW OF BOBBINK & ATKINS' COLLECTION OF CLIPPED EVERGREENS, AT RUTHERFORD, N. J.

Our carnation stock was planted in the field some weeks ago and it has been over thirty days since we have had rain. This has necessitated the watering of the plants in the field in order to save the stock, which would have perished before it would have been able to make roots in a soil dry as powder. When such conditions exist the only thing to do is to water the field; and if this is done it should be done thoroughly. To but half do it would be worse than to leave it undone. Follow up the watering with a thorough hoeing and the plants should take hold and send their roots downward and obtain the needed moisture. A dry spell is a call for continuous cultivation; for with a crust on the soil the moisture is lost by capillary attraction, while a mulch of dust will protect the field from this loss. If stock had not been put into the field and treated in this manner it would only remain indoors to suffer from becoming pot bound, and the check would perhaps have been more serious, for I prefer the loss of a few hundred plants to a severe check to thousands.

One result of hot weather is small flowers, but this can be remedied, at least partially. We are now giving the plants full air day and night, and have given the benches a heavy mulch of cow manure, with very satisfactory results. With the warm weather red spider will multiply, but the pest can be kept in check by a constant use of the hose and there is little danger of the benches becoming soggy.

This is the month of heavy cutting and the hot weather has hastened the development of the bloom. I see that this is the case all over the country and low prices are the result, but if the quality is maintained there is a sale for bloom, while poor flowers at this season will be found hard to dispose of at any price.

Disbudding should be carefully attended to and this work will increase with the continued bright weather. I always feel, when Spring comes, that the nervous work of the year is over. Mulch the plants well, water freely, keep red spider and disbuds in the background and fumigate for aphis, then let nature develop the bloom as fast as she will, for there is little more which the grower can do to aid the coming flowers to maturity.

There is a very noticeable difference in varieties, and Golden Beauty is showing its love of heat, for the variety is now in its prime. Eldorado has improved, also. Mrs. Lawson has held its own in quality, while all the others have deteriorated slightly in quality, but have increased in the number of flowers.

A House from Pots.

Growing carnations inside has been practiced here in the past, but one reason it has been given up in recent years was the fact that to bench a house early there is a loss of the Spring crop from the old plants, if the same houses are used. This year we are, however, adding a house to the carnation department, and it is now benched with Mrs. T. W. Lawson, Enchantress and a few President McKinley and Lillian Pond. Several interesting points have come up since the work of benching was begun. First, let me mention a machine for pulverizing soil. It was recommended to us by a neighboring florist, and has proved a success, while it is very simple in construction and is quite inexpensive when the saving of labor is considered. It is called the "Sod Crusher" and is sold by the Florist Supply Company. I do not hesitate to say that it has shown itself to be worthy of a trial by all who have soil to pulverize. After filling the house the soil was put through the crusher and then leveled and compacted.

If planted from pots no shade is required, for a better growth will be the result of full sunlight. The watering of such a house is a careful operation; the plants need water only in limited quantities, and the bench should not be soaked. When this is done and air is excluded from the soil, it is very apt to sour, the absence of feeding roots delaying the drying out. Such a house as this will be interesting when a comparison is made in the Fall. I

VIEW OF INTERIOR OF RHODODENDRON HOUSE OF BOBBINK & ATKINS, RUTHERFORD, N. J.

might add, that this house is planted half on solid bed and half on benches.

"The American Carnation."

This work, which has at last made its appearance, is very interesting and is a valuable addition to horticultural literature. First of all, it is plain and practical, and yet this is only what might be expected from such a practical man as the author, Mr. C. W. Ward. His method of culture, which he describes, is in general the method of all the really successful growers, and for a plain and concise summary of what is essential to the production of good carnations, I know not the equal of this recently published volume. W. R. PIERSON.

CANADIAN NEWS

Ottawa.

No break in the dry spell. We are badly off for rain. Carnation plants were kept as long as prudent and then planted, well watered and covered in, and now we are watching for the deluge.

Since last writing we have had another big fire, but although covering big ground it did not touch the craft, nor reach to the best houses of the city, therefore did not have any effect on the flower business. But it was a bad fire.

Owing to the warm weather the plant business is moving lively. Geraniums are in great demand as usual. The dry weather has interfered somewhat with the pansy sales. Veranda box trade is booming and promises to be the biggest feature of the business.

The planting of roses has begun. Old roses are still giving very good flowers. Carnations are also plentiful and good and selling well.

The Horticultural Society held its first monthly show last week, pansies and bulbous stock making up the exhibits. Owing to the dry weather the quality and quantity were hardly up to the usual standard. The new president, P. J. Keyes, made a good start. The attendance was large.

All the florists are making additions this year. Graham Bros. are building, or about to begin, a large house. Scrim is putting up two houses, 25 and 30 by 100 feet.

R. Wright, of Aylmer, is moving from his present store across the street, and is having built a greenhouse, 100x20 feet, in the rear, with arrangements for driving his wagons under cover for loading and unloading—a good thing for this climate. The whole structure will be built in the best style and finished off as it should be for city use. This, in conjunction with his new store, which is to be remodeled and supplied with the most attractive furnishings, will be without doubt the handsomest retail florists' shop in Canada. E.

TORONTO.—After three weeks without rain, a few showers on Sunday night and Monday were very welcome here. Carnations that were planted in the field needed water very much during the end of last week.

The business in bedding plants is getting to be very brisk, and the present indications are that geraniums will be scarce. Boxed annuals, however, are very plentiful and the growers of this class of stock are cutting each other's prices until the sellers get very little for their goods. Only the very best bring enough to pay for the seed and labor.

The cut flower business continues fairly good with stock still plentiful. Roses are good, and carnations are both fine and abundant. Tulips from outside are plentiful but the very warm weather of the past few days has been hard on them and only the late varieties are to be had in perfection. Narcissus poeticus are in big supply. Outside lilac is coming in freely.

The Ontario Jockey Club races, which begin next Saturday, will make things quite lively and a considerable quantity of flowers will be used.

The display of plants on the new St. Lawrence market on Saturday last was very fine. E. Hoskin had a nice show of hydrangeas, while all the growers had a good display of cut stock, and the hardy and bedding material were quite up to the standard. Stock keeps better in the new than in the old market, for it is entirely away from the wind and dust. The public is coming to the new market quite as well as it did to the old one. [illegible] M.

COTE ST. PAUL, CAN.—On May 18 a barn belonging to Aaron Martin & Sons, florists, was destroyed by fire; damage $4,500, with small insurance.

Review of the Market

NEW YORK.—This city has been in the grasp of a heat wave this week, the like of which has never before been experienced during the month of May. Flowers of all descriptions have been hurried to market, and, as one flower dealer remarked to the writer on Thursday, there are sixteen hundred times more flowers coming in than there is any demand for. Without a doubt, that statement is a slight exaggeration of the business condition; still trade is very bad, and it is but a very small percentage of the flowers coming in that are sold at the figures mentioned in our market column.

It is self-evident that the rose growers in this vicinity have not yet begun to throw out their old stock. The market is flooded, and slips of roses containing all grades, including specials, are freely offered at $5.00 a thousand flowers.

Carnations are no better off—worse, if anything. Some choice blooms have gone in thousand lots at $3.00 a thousand, and many others have not sold at all.

Lilac is not coming in quite so heavily as it did a week ago, still there is more than enough for the demand.

Sweet peas have assumed a glutted condition, and while there can be found a sale for a few special bunches, the vast majority don't realize enough to pay express charges.

Iris blooms have been very plentiful within the last few days. If any cut flower work was going on, these blooms would no doubt be grabbed up readily, owing to their very showy colors. As it is, iris are lying around, and find no buyers. Peonies, also, are scarcely needed, though there is a fair supply reaching the city every day.

Lilies are to be had at any price almost, as also are stocks, antirrhinum, etc.

As Memorial Day occurs next Saturday, we are in hopes that a decided change for the better will be felt in cut flower circles during the next few days.

PHILADELPHIA.—The condition of the cut flower market has not changed much since last week. As may be expected, there is an abundance of all kinds of cut flowers; but thanks to the energy displayed by several of the commission men the stock is kept fairly well moved daily. American Beauty roses are not quite so plentiful, and much of the stock offered shows deterioration in quality. Choice teas are selling fairly well, but there is an awful lot of the poorer grades of these roses around.

Peonies are now being received in larger numbers, but are not yet moving well. Present indications are that the cut around here this season will be smaller than last year. This is chiefly accounted for by the fact that the Henry A. Dreer firm won't have so many, as they made large sales of roots last Fall.

Carnations are still a glut, excepting a few choice varieties. While these are going fairly well, prices are away down. Some very good stock is arriving of such varieties as Flora Hill, Mrs. G. M. Bradt, Prosperity, Estelle and Ethel Crocker. The stock of these flowers now being offered would have been gladly welcomed three months ago.

Edward Reid has been out of town several days this week visiting firms to which he ships flowers and has been very successful in moving stock of roses and carnations, and in securing good orders for next week.

Leo Niessen is doing considerable shipping business; in fact, the activity around his place is very noticeable for this season of the year.

S. S. Pennock has been out of town, and shipping at his establishment has boomed considerably. He is also handling a great many plants, principally small palms and ferns.

No quotations of cut flowers are given, because the principal object seems to be to move stock at any fair price to prevent accumulation. DAVID RUST.

BUFFALO.—Trade among the retailers is running rather light. Carnations finally, and for the first time in this whole season, have shown up in an over-supply. From but $1.00 per 100 up, is the ruling price, and many must go unsold. Roses are ample as well, and prices weak. Quality is more or less inferior, too. The best American Beauty are wholesaled at $3.00 per dozen. Outdoor lily of the valley is plentiful, the best barely commanding $1.00 per 100. Early tulips are done, the late and parrots, now in, go more or less slowly at $1.00 to $1.50 per 100. The weather has been dry and continuing warm, day and night, for some weeks. This has tended to bring along outdoor blooms with a rush, and fully ten days ahead of common. Kinds that usually are depended on for Decoration Day needs will no doubt be done by that date, so common flowers will run scarce. VIDI.

BOSTON.—The improvement in the market conditions confidently looked for this week has failed to materialize; in fact, the market is in worse shape at present writing (Wednesday) than at any time this season. In the past, even in its most druggy state there has been some sale for flowers at some price, but now the wholesalers report it is impossible to dispose of all the stock at any figure.

It is extremely difficult to attempt to quote prices this week. Carnations range from 25c. to $1.00 per 100, and do not all clean up. Roses make 50c. to $4.00 per 100, with the exception of American Beauty, which have gone as high as $16.00 for specials. Good lily of the valley from frames is freely offered at 50c. to 75c. per 100; sweet peas, at 25c. to 35c. per 100, and pansies, marguerites, stocks, spiræas, etc., correspondingly low.

The auction sales have brought good results this season so far, but plant trade has been hardly up to the average. F. J. NORTON.

CHICAGO.—The market the past week has been overstocked, and the prices realized very low. The present glut is the worst ever seen here at any time; the oldest wholesalers never before in their experience passd through such a season as the past week. There seems no material change in sight, and with the continued warm weather none is expected for a week or ten days. Clean-up sales of all kinds of flowers are reported at very low prices. The figures realized for good shipping stock have been fairly satisfactory. Extra good American Beauty are selling at from $2.00 to $3.00 per dozen, while other grades run from 2c. each up. Extra good Bride and Bridesmaid are bringing from $5.00 to $6.00 per hundred, with the other grades at almost any price that the buyer wishes to pay. Extra fancy Liberty is in good demand, selling as high as $2.00 per dozen. Golden Gate, Perle des Jardins, and Meteor are fetching from $4.00 to $6.00 for shipping stock, while the inferior grades are going with the other roses. Kaiserin Augusta Victoria and La France, for extra fancy stock, realize $10,00 per hundred; while the top selling price for Mme. Abel Chatenay and Sunrise is $2.00 per dozen for extra fancy.

Carnations are in over-abundance, and some sales the past week have been made at very low prices. While extra good stock brings from $1.50 to $3.00 per hundred, the bulk of the sales are made below those figures. Longiflorum lilies and callas are seen around in considerable numbers and are selling at from $6.00 to $8.00 per 100. Large supplies of lilac are in, but the quality is not as good as in former years, as the stock was damaged by the late frosts. Peonies are increasing in numbers, but none from the immediate vicinity are to be seen, most of the supply coming from the southern part of the State. Peonies are not in so good demand as in former years, although the quality is as usual. The local growers will soon be able to ship, and the quality of their stock is expected to be extra good. Lily of the valley is in better demand than heretofore, and the prices realized are considerably better than those of last week. Tulips are in good demand; outdoor grown stock is selling at $3.00 per hundred.

Early flowering hardy shrubs are coming in and sell fairly well. The hardy ferns are getting scarce, as is smilax; while asparagus seems to be plentiful enough to meet all demands. Sweet peas are in abundance and are not selling as well as in former years; nor is the quality as good. Several lots that are off color have been seen already. R. J.

INDIANAPOLIS, IND.—The usual Spring surplus has again arrived. A week of warm, sultry weather has brought out roses and carnations by the thousands. Even though prices have been cut to a great extent, there remains a large quantity for which there is no sale at any figure. There has been some funeral work and a few decorations, but these do not make any impression upon the large receipts of stock each day. Good Bridesmaid and Bride roses sell at $3.00 to $5.00 per hundred wholesale; seconds, at $2.00 to $2.50 per hundred. Shorts may be had for almost any price offered by the purchaser. American Beauty wholesale at from $2.00 to $20.00 per hundred. The dealers are unable to dispose of all at these prices, and many go to waste.

Bridesmaid, Sunrise, Perle des Jardins retail at 75c., $1.00 and $1.50 per dozen. American Beauty at $1.00 to $6.00 per dozen. The best grades of carnations may be bought for $2.50 per hundred, inferior grades at 75c. to $2.00 per hundred. Retail prices range from 35c. to 75c. per dozen. Sweet peas wholesale at 25c. t 35c. per hundred.

WEBSTER BROS., Plantsme
HAMILTON, CANADA
Mention the Florists' Exchange when writin

There has been a large demand for a kinds of bedding stock, and better price are being obtained than those of last yea I. B.

PITTSBURG.—If we had decent weather it would help trade all around, but wit the thermometer close to 90 degrees an not a drop of rain for several weeks, n much can be expected. If this dry spe continues much longer a great deal harm will be done to plants and fruits As it is, young stock that was plante out this Spring is suffering. Outdoo stock of cut flowers is coming in heav at present, and not much will be le for Decoration Day. Peonies and iris ar being cut; daisies and several other sort of hardy blooms are added to the alread overstocked market. Roses and carnations are doing well, are of good qualit and low enough in price. Sweet peas ar in better demand, and coming in mor freely. Some fine yellow tulips have bee shipped from the North. A few violet are still to be had.

The bedding plantsmen are not any to well pleased with trade so far. The dr spell is hurting business, and after th first good rain every one will have mor to do than he is able. As most of this trad is done before Memorial Day, but littl time is left. There are plenty of plant in the markets, but not enough are bloom, particularly of geraniums. Goo blooming plants are scarce and bring better price than last season, 15c. or tw for a quarter; per dozen, from $1.00 upward. Cannas will be abundant, also caladiums. Salvias are selling better ever year, as many thousands are grown no for former hundreds. Some of the growers are short of water at this busy tim

Memorial Day falls on Saturday, th busiest day in the Allegheny market, an according to custom the market will b closed at 10 a.m., which does not suit th florist trade.

Ed. Reid, wholesale florist, Philadelphi spent a day in the city last week.

E. C. Ludwig, the Allegheny Mark florist, has bought a valuable piece property near the market house. E. C. REINEMAN.

ST. LOUIS.—Very little can be said regarding the market in this city. The onl slight improvement noted is in funer work, which has been quite plentiful The weather has been favorable for th planting, which is now in its full height and everybody is busy with this kind o work. The wholesale men are still overloaded with good stock, which sells a very cheap prices. So many carnation came in the past week that they wer disposed of as low as $5.00 per thousand this for all sorts, good, bad and indifferent. The best carnations still bring $1.5 and $2.00 in small lots. Sweet peas, o very fine quality, are in the market, an there is a favorable demand for them a 50c. and 75c. per hundred for the best They are now very plentiful, and a goo many of them are going to waste fo want of demand. Only the lighter shade are selling at the prices mentioned. Rose are arriving by the thousands, and it is only the better grades that bring a fai price. Others are sold in 1,000 lots a from 50c. to $1.00 per hundred. American Beauty good stock are selling out much better than they have been, and the prices are the same as quoted last week—$2.00 and $3.00 per dozen for the best; shorts at any price. Lilies have shortened up in supply somewhat, and have become scarce; the price on them is up to $8.00 and $10.00 per 100 for the very best.

Gladiolus are coming in, though not yet numerous; 50c. per dozen is all they bring. Very fine peonies are now available and bring $4.00 per 100. Lily of the valley averages $2.00 and $3.00, with none too many in the market. Smilax is coming better, at 15c. and 18c. per string. Asparagus and adiantum continue in supply equal to the demand, with no change in prices. ST. P.

LOUISVILLE, KY.—Business continues good, with plenty of roses and carnations in the market. The season for the planting of bedding stock is now on in full force, and those florists making a specialty of this class of work have all they can do. A. R. B.

General News.

Leonard Barron, secretary of the American Rose Society, was here the past week making the final arrangements with the Pennsylvania Horticultural Society about the schedule for 1904. The rose schedule is now complete, and is in our possession to print. It will be issued during the next two weeks.

Adolph Farenwald has his two new rosehouses about completed. He will have fourteen houses in American Beauty and Liberty roses next season.

Samuel C. Moon, of Morrisville, called at the Florists' Club room this week to remind the members of the invitation he gave last Winter to visit his nurseries in June. During an address at a club meeting he said that florists should become more familiar with evergreens, etc., especially as to the various colors of the plants, so that they could more readily order for window boxes, small groups, etc., such evergreen as would blend well together. He invited the members to take a trip to his nursery as their Summer outing. The matter will now be taken up, and at present the middle of June is thought of. Friend Moon says he will give the boys something to eat and plenty of spring water and buttermilk. John Westcott says, "That's all right; we can make a brew to use on the way up and back."

The annual shoot of the Pennsylvania State Sportsmen's Association being held this week on the Florists' Gun Club's grounds has proven a most successful affair, there being about 250 shots from all over the country present, including all the noted crack shots. Five sets of traps are in constant use from morning till darkness falls. The Florists' Gun Club members have put in a busy week taking care of their guests.

The May meeting of the Pennsylvania Horticultural Society was a very good one. Prizes were awarded for Calceolaria rugosa to Ernest Schrieber, gardener to W. L. Elkins, Esq., and Joseph Hurley, gardener to Jas. W. Paul, Esq. Prizes for cauliflower were offered by Henry A. Dreer, Inc., and were awarded to Otto Griebwasser, gardener to John B. Stetson, Esq., and Thomas Long, gardener to George W. Childs Drexel, Esq. Henry F. Michell offered prizes for cauliflower, lettuce and calceolarias, which were awarded in the order given to Otto Triebwasser, Thomas Long, and Chas. Gumpper, gardener to H. E. Richards, Esq. H. Waterer offered prizes for gloximas; the premiums went to Wm. Robertson, gardener to John W. Pepper, Esq., and Joseph Hurley.

During June two meetings of the society will be held—the first on June 2, which will be the outdoor rose meeting, and the other on June 23. This latter will be the sweet pea meeting. Large exhibits are expected at both.

The date for the combined Spring exhibition of this society and the American Rose Society for 1904 was decided upon for March 22, 23 and 24.

H. Waterer, seedsman, sailed for England on Tuesday last on the Kaiser Wilhelm der Grosse on a business trip. He will be away about four weeks.

Bowlers, don't forget about the tournament to select the Milwaukee team. If you wish to enter send your name to Captain George Moss before May 29. The first game will be rolled June 3.

DAVID RUST.

Boston

News Notes.

The school committee, at its last meeting, voted to abolish the annual school festival this year—an occasion when many flowers were used. From 3,000 to 3,500 bouquets, for which the city paid 40c. each, were presented to the grammar school graduates on the first Saturday of July, just the time when business is most quiet.

George A. Sutherland has an immense stock of metal wreaths on exhibition this week, and reports that the "Koral" letter makers are working overtime.

At Welch Bros. the first pond lilies of the season arrived this week.

On Tuesday quite a lively hailstorm, though luckily of short duration, visited this section, but no reports of damage have been heard. F. J. N.

Pittsfield, Mass.

Nine florists of Pittsfield have agreed on a schedule of prices for the season and are to have the schedule printed and distributed. The schedule of prices covers the entire list of potted plants which are annually marketed, celery, cabbage, cauliflower, peppers and tomatoes. The florists who have agreed on the schedule of prices are John White, F. I. Drake, F. S. Follwell, George Neal, T. L. Lowden & Sons, L. W. Acheson, R. Engleman & Son and John O'Brien.

Providence, R. I.

General News.

No matter the weather conditions, the old standbys manage to attend the Florists' Club. At our past meeting there was a regular attendance, and casual business held up there until after 11 o'clock. It was the opinion of the members that every meeting rendered something worth knowing, and that we all profited by coming together.

On Thursday evening, June 11, it is intended to hold a chowder supper and a social discussion of current doings in our midst. Mr. Rennie, the secretary, is hopeful of a fine attendance.

The intense warmth of the past week has hindered planting, and the lawns have burned considerably in some sections. The bedding out work is just at its busiest, and lots more yet to do. C. S. M.

Florists' Club Meeting.

The Florists' Club held a very interesting meeting Tuesday evening. Mr. J. F. Huss showed two fine specimens of Lælia purpurata (different varieties), each plant having two dozen or more blooms on it. Mr. Huss gave some interesting facts on the subject of orchids. Robert Karlstrom, gardener at Elizabeth Park, showed twenty-five species and varieties of Spring flowers, hardy shrubs and herbaceous perennials, which included Phlox divaricata, Spiræa prunifolia, Iris crista, Pulmonaria officinalis, Mertensia virginica, Phlox subulata alba, Phlox amœna, Phlox subulata "The Bride," Aquilegia cœrulea Van Houttei, Geranium maculatum, Primula farinosa, Azalea mollis, Azalea mollis "Anthony Koster," Azalea amœna "Hydrogama," Azalea indica narcissiflora, Azalea amœna, Azalea nudiflora, Exochorda grandiflora, Lonicera tatarica alba, Lonicera tatarica, Berberis japonica, Cercis canadensis, Viburnum lantana, Pyrus floribunda, Prunus pumila. Mr. Karlstrom gave a very interesting talk on the same. The judges for the evening were H. J. Koehler, E. Fardel and J. Vidbourn, who awarded a diploma to Mr. Huss and a certificate of merit to the Elizabeth Park Nurseries. One new member was voted in. J. F. C.

Syracuse, N. Y.

Trade is very dull; funeral orders are the great standby of the florists just now. We are having the longest dry spell that has been known for many years; as a consequence, very few carnations have been planted out, the ground is so parched and dry. A heavy frost, 8 degrees, on May 1, did considerable damage to the young growth of hardy shrubs, and the outlook for Memorial Day is far from being bright, as very little can be depended upon outside stock to help out.

Park Superintendent Campbell has had some very beautiful beds of tulips and pansies in the parks which have been greatly admired. Every one is praying for rain; when it does come bedding out will be done with a rush. So far, nothing has been done in that direction.

Last year the Evening Herald Company started a gardening club among the school children and sold flower seeds at one cent a package. Over 21,000 packets were disposed of. This year the sales have reached 50,000 packets. The vast amount of good accomplished by the work cannot be estimated, for each week children took bouquets to the newspaper office, to be sent to one of the hospitals or homes. It was surprising the interest that was shown in bringing in the most flowers. Another very notable object obtained was that there were fewer depredations on flower beds than ever before known. The children seemed to value their own flowers so much that they respected other people's. It would be a grand thing if many other cities would follow the example of the Syracuse Evening Herald. A grand opportunity is open to some live, wideawake florists to take the matter in hand. I will gladly outline the Herald's plan to any who feel interested. H. YOUELL.

Utica, N Y.

At the last meeting of the Florists' Club Professor George E. Hodges gave a talk on plants, illustrated with stereopticon views. The subject was treated in an interesting manner; the views were clear, many of them being beautifully colored.

At the business session the following officers were elected for the current year: President, F. J. Baker; vice-president, Y. McGowan; secretary, J. C. Spencer; treasurer, C. F. Seitzer. The secretary's annual report showed that there were 35 members on the roll, a gain of 15 during the year. The treasurer's books indicate a balance of $69.10 on the right side of the ledger. QUIZ.

Chicago.

ws Jottings.

The weather here at present is not y favorable for outdoor carnations. se who have their young stock nted on high ground have begun to the effects of the dry spell, which l also have a considerable effect on aster crop the coming Summer, if rain should come pretty soon etail trade in the cut flower line is very good. There is not much e by the retail florists in the plant .

aughan's Seed Store is doing a large le in Spring bedding plants at the sent time.

r. and Mrs. Peter Reinberg will brate their twentieth wedding anniversary Friday, May 22.

he employees of Vaughan's Seed re held their fourth annual encampment at Western Springs, Sunday, May with the employees of the greenses there. All report having had excellent time.

sitors in town the past week: J. Hobbs, of Joliet, Ill., and Mr. Noe, he New York Cut Flower Exchange.

R. J.

St. Louis.

b Meeting.

The attendance at the club meet- last Thursday afternoon was very n. May is always a bad month for florists to get away, as nearly all the plantsmen are busy with out- r work. At the time of opening the ting only eight members were pres- with both the president and vice- sident absent, the former in a let- reported himself sick and the latter busy planting out. So ex-President more was prevailed upon to take chair and the meeting opened at 'clock.

ll committees were continued until t meeting. The trustees are to e arrangements for our annual ng in July, and will report at the t meeting. William Davies, who last with E. G. Hill Co., of Rich- d, Ind., was present. Mr. Davies now a lawyer and out of the busi- s, but is still a lover of flowers. He le a short talk on how he got in and of the business. Mr. Davies was ted an honorary member of the . Mr. Fillmore's essay was not l; it will be saved for the next ting, when a larger attendance is ected. This, with Vice-President dler's essay on "Peonies and Irises Cut Flowers—How to Increase k and Care for Them," will make June meeting an interesting one. growers of sweet peas are requested bring a few flowers to the next ting; a special effort will be made ave that meeting one of the largest he year, as a few distinguished vis- s will be in the city at that time will be invited to attend. The date his meeting is Thursday afternoon, e 11, at 2 o'clock.

e and There.

The landscape department at the rld's Fair is busily preparing its k, which will distinguish the Louis- Purchase Exposition display from previous one of the kind. William l has charge of the Tesson greenses for the nursery work in the scape department. Some of the nues are rapidly acquiring a fin- d look.

. Bayersdorfer & Co.'s representa- , Martin Reukauf, of Philadelphia, in town the past week calling on trade with Decoration Day goods.

F. Ammann, of Edwardsville, was isitor Monday, much improved from sprained back. Fred missed the two meetings, but says this will er happen again. He reports trade the plant and cut flower lines as r better.

eorge Windler, on Delor avenue, is busy planting out carnations. A l season in plants is reported.

x-Mayor Halstedt, of Belleville, of the St. Clair Floral Co., called sday and reported plenty of work ll branches of the trade. The firm begin planting the Hucke place t week. Mr. Halstedt will take a rt trip to Chicago next week.

ling.

At the bowling alleys last Mon- night eight members rolled three es. Some excellent scores were le. Beneke, with 192, was first in score; Kuehn second, with 181. ber, Miller, Young and Adler also wed that a good team can be made up for the Milwaukee meeting this Summer. Every Monday night the boys can be found at the Monarch alleys, 2012 Locust street. All florists are invited to call and try their hands at the game the florists like so well.

ST. P.

Buffalo.

News Notes.

Some of Rudolph Boettger's geraniums, as offered on the market last Saturday, challenged admiration as approved quality stock. As regards varieties, he notes that excepting a very small number of odd colors, a trio consisting of J. J. Harrisson, semi double scarlet; Beaute Poitevine, salmon-pink, and S. A. Nutt, red, largely meets the demands as satisfactory to most buyers. By confining his efforts to so few varieties better plants are produced.

C. F. Christensen mentions active sales in bedding plants.

At Lancaster, N. Y., Palmer & Son are well started at more building. In round figures 8,000 feet of glass will be rebuilt, and 10,000 newly added. The constructing will include two houses of 200 feet long, one 12 feet, the other 21 feet wide; one of same latter width, 235 feet long, and one 300 feet long by 12 feet, which is to be used in part as a connecting house or passageway, thus taking the place of wood shed buildings, none of which is seen here. A boiler house also will be built, large enough to install four tubular steam boilers of 52 horse-power each. Two of these will be set and employed directly. Wood construction will generally enter in these houses, which are to be devoted to carnations and other kinds in assortment.

At Delaware Park.

Any commercial plantsman might be pardoned for looking at the supply of bedding stock at the Delaware Park with envious eyes. Assistant Superintendent James Braik certainly has surpassed any previous records, for both quantity and quality.

For special effects and semi-tropical bedding, are grown musas, Alocasia illustris, a favorite here; ricinus, caladiums and cannas, the latter running into thousands, and in which Black Beauty, President McKinley and Tarrytown are prominent. The geranium stock numbers fully 25,000 plants, generally grown in 4-inch pots. The leading varieties include single General Grant, Mrs. E. G. Hill, S. A. Nutt, Frances Perkins (red), Alphonse Ricard, Lesaul, a deep double red; Pasteur, dark red; Beaute Poitevine, a double dark pink called Detroit Bedder, and Mme. Salleroi, for bordering. In coleus varieties, Verschaffeltii, Golden Bedder and Chicago Bedder fill the needs of general purposes, aside from a limited number of Firebrand for brilliant effects. But little seed-grown stock is employed, and limited closely to verbenas, petunias and antirrhinums. Coming to alternanthera, a 300-foot spread of six feet in length sash accommodate 60,000 plants—as fine a lot as we ever set eyes on. The varieties chiefly depended on are A. paronychoides major, aurea nana, versicolor, amœna amablis and spectablis. The entire growing here for planting out numbers a total of 150,000 plants.

The Board of Park Commissioners has taken measures for a general labeling of the popular kinds of trees in the park, both the common and botanical names to be included—a commendable move in progressive education, surely.

VIDI.

General News.

John Elsner has bought several acres of ground from John Anding. The property is located in Auverne avenue, Woodside. He expects to put up a large range of glass this Fall.

Henry Duderstadt, formerly foreman for A. Weigand & Son and lately with the Wittbold Co., of Chicago, has taken charge of Bertermann Bros.' conservatory.

Local department stores are selling American Beauty roses at 25c. per dozen; tea roses at 15c. per dozen, and carnations at 20c. per dozen.

A prominent florists' supply house has been accepting retail orders from the undertakers of this city. It is a serious matter to sell to a florist and then accept orders from his retail customers at the same price.

The outlook is for a large business Decoration Day. Peonies are not very far advanced and ought to be just right by the 30th.

Herman Junge is contemplating several extensive improvements in his residence in the near future.

Jacob Forest, of Greenfield, Ind., transacted business here this week.

I. B.

Denver.

At a meeting last week in the office of A. J. Graham, superintendent of city parks, florists from different parts of the State formed a society to arouse interest in flower shows and plant exhibitions. The name of the association is the Colorado Society of Floriculturists. Officers were elected as follows: John Sutterathwaite, of Denver, president; F. E. Crump, Colorado Springs, vice-president; Mrs. J. M. Johnson, Boulder, treasurer; J. A. Valentine, Denver, secretary.

FOLEY
CAST IRON
GUTTER

This cut is not full size.
We make two sizes:
2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

All Cypress is good, but some is better than others. The best is open-air dried, and it **must** be open-air dried in the South.
It takes **two years'** open-air seasoning to make Cypress good enough to go into our Greenhouse Material.
Such Cypress can't be picked up every day.
We have 2,000,000 feet of it ready for use.
Shall we use some of it in material for you?
Our prices are reasonable and stock the very best.
Write us about it.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

SAN FRANCISCO.—Seed growers are not free from alarm because of rain shortage. The lack of rain was lamented by this important California industry three weeks ago, and no moisture has yet come. Mr. Cox, of the Cox Seed Company, has left for an inspection drive over his big seed plantations in Santa Clara, San Joaquin and Sacramento counties, a total of area of upward of 2,400 acres. ALVIN.

ST. PAUL.—L. L. May and J. E. Northrup were in Omaha last week in attendance at the Western Seedsmen's League. Mr. May extended his trip to Shenandoah, Iowa, and reports that section of the country under water, owing to excessive rains the past week.

A. W. McT. Martin, of L. L. May & Co., accompanied by Mrs. Martin, sails for Scotland May 30, to be gone three months.

The demand for seed corn is abating somewhat now, though planting has not yet commenced in some sections on account of wet grounds. This it is thought will create a demand for millet. VERITAS.

Condition of Seed Crop Plants.

The outlook in Connecticut for early seed crops, such as turnip, ruta baga, cabbage, beet, parsnip, and kale is exceedingly discouraging. No rain since April 15 has rendered the ground so dry and hard that these early plants are being completely destroyed. On turnip and ruta baga the crop is already beyond repair, and one-fourth crop is a liberal estimate of a yield on these. The same is true of kale. Of the other varieties, if we should have rain, of which there seems to be no immediate prospect, we might still have half a crop, but many of the stalks are entirely dead, especially where the crops are on anything but the richest and most fertile soil.

Onion seed has not suffered so severely up to the present time, as it seems to stand the drouth better.

Sweet corn is now being planted very rapidly. That which was planted early is already up and is a fair stand, but the later planting, and there is a great deal more to be planted, will not germinate until we have rain. This is

HIRAM T. JONES, Union County Nurseries, ELIZABETH, N. J.
Mention the Florists' Exchange when writing.

especially unfortunate at this time, because of the fact that dealers here have sold so close owing to the high prices of corn, that in many cases they have not sufficient seed saved for second planting. The result will be that very many fields will be a poor stand for the whole year.

Seed corn, which was so high in February and was much easier during March and April, has taken another spurt, and telegrams for corn have been coming to all dealers in this section thick and fast during the past three weeks, and February prices are again in vogue. Anything in the way of a good strong vitality corn at present meets a prompt sale at $10 per bushel.

A large delegation of the local seedsmen will attend the American Seed Trade Association meeting at Atlantic City in June.

W. S. Woodruff, of the S. D. Woodruff & Sons' Seed Concern at Orange, Conn., is at present, with his wife, on the Pacific Coast, where he went on a trip combining business with pleasure. He will not return East until about July 1.

MILFORD, CONN.—Albertus N. Clark writes: "The seed crop plants have been seriously damaged by the long-continued dry spell. The new crop of turnips here will not produce over 50 per cent. of expectation at planting time; in fact, is going back every day, many pieces being a total failure. All other crops are being injured in like manner. The prospects are decidedly unfavorable."

BALTIMORE.—J. Bolgiano & Son write: The various crops in the surrounding country were in a very desperate way prior to the rain we had on Saturday night and Sunday afternoon. We experienced almost without interruption a drouth of nearly six weeks. The rain came too late to save the strawberry crop, which was only about 25 per cent. The pea crop will be about 60 per cent., rain coming in time to very materially help it. Peas are bringing splendid prices, this morning's (May 26) market being from $1.00 to $1.10 per bushel, which is more than double the prices they were bringing this time last year. All vegetation is very backward and market gardeners have little or nothing to bring to their stalls. Even radishes are selling at a big premium, and the prospects for the cabbage crop are poorer than has been known in years. The spinach crop was a failure and prices ruled high. The farmers and truckers are in a discouraged state on account of the severe conditions they have had to meet here this Spring—first, too much rain, then such a continued drouth—that many of them are speaking of giving up the work.

PHILADELPHIA.—Robert Buist Co. say, if all the seed growing sections are suffering from drouth as much as we are the populace will have to depend upon canned vegetables, and largely those carried over from the previous year at that. Our gardens are so completely dried up that it is about necessary to use a pick to loosen the soil. Our turnip seed acreage covers over two hundred and ninety acres and in an average season this should produce from five to six hundred pounds per acre; this year, it will not average one hundred pounds. Onion sets, seed potatoes and tomatoes are likewise very seriously affected; in fact, all seed crops maturing in June, July, August and even later we believe are beyond recovery.

W. Atlee Burpee & Co. say: "Not for years have we known such a dry time as we are experiencing at present. The ground is very dry, and it is utterly impossible to do any late Spring plowing. Some seeds sown within the past two or three weeks are simply lying in a dormant condition in what you might term dust. The farmers are suffering very much for want of rain, and unless it comes soon their corn crop will be very late indeed. The hay crop is practically ruined.

"We waited until the past week to commence setting out tomato plants, and as an experiment tried a few thousand late Saturday afternoon, using a Tiger Transplanter for setting. These plants stood up so well on Sunday that we now have two of the transplanters working and expect to get out the majority of our tomato plants this week. The ground, though, is very dry, and as the potato bugs are numerous it will require careful watching to keep the plants alive after once being set out.

"We have had a very good stand of sweet peas, but the plants are now at a standstill owing to the lack of rain. Garden peas that were planted early commenced to blossom and owing to the drought are setting very few pods."

Other reports will appear next week.

European Notes.

The drought spell of last month has given way to a spell of floods, and practically all over Europe the lower lands have been partially under water for the last two weeks. A somewhat better state of affairs is beginning to rule now, and warm, sunshiny weather has been experienced for a few days and is promised to continue. There is, therefore, much room for hope, and while things are very backward there is a general appearance of healthiness and freedom from insects of all sorts, and warmer weather, with the huge supply of moisture in the ground, should do wonders for the crops.

Several large acreages of swedes and turnips have been ploughed up, owing to the weakness of the plants, which were very small at time of planting and unable to cope with the several difficulties of the Spring weather; and in every district where these crops are grown there is a smaller acreage than usual. Beets are still reported as rather uncertain, although they have now had abundant rain. They will be late and none too strong, which, with a reduced acreage, will leave us with smaller crops than had been anticipated.

EUROPEAN SEEDS.

It is reported that the French pansy crop is expected to be short, especially the finer strains, owing to the cold and damp weather.

Joseph Sternecker, Erfurt, is dead at the age of 82. The deceased was head cultivator to the well-known firm of Ernest Benary, which he joined in 1864. He was widely known both in his own country and abroad on account of his great knowledge and experience in all horticultural matters, and was equally respected by those who knew him for his uprightness and probity of character.

n the face of the terrible drouth pre- ling at this writing, the harrowing l constant stirring of the soil is a nderful help. Persistency will save ny a crop.

each stones in beds should be outing now. Lift them carefully as n as the tops are above ground, cing the roots in a vessel of thick ddy water, and transplant them to vs, where they may be budded in the ll.

hen trees have been grafted the cks will always send out a lot of ots, which, if unchecked, will over- elm the cion. To prevent this, do strip off the shoots, but pinch them leaving but a leaf or two to each. is gives the cions a chance, while leaves left on permit of the proper ctions of the stock continuing.

he sweet-scented calycanthus, C. idus, rarely seeds, hence its propa- tion is by layers or division of the nts. It is so scarce in the trade t those who have suitable plants uld layer them this season.

The Situation for the Laburnum.

any inquiries have come to me as to proper situation in which to plant laburnum. Not a few persons think s subject cannot be grown in this ntry at all, but this is a mistake. ough I have never seen one looking happy as those observed in Europe, y do grow and thrive fairly here. only reason they do not do equally well here as in Europe is because of heat and the dryness of the air. a situation can be afforded them ere the ground is damp, it gives lness at the root as well as moist- e. If, besides, there would be shade t by a building or a tree—but not der a tree—it would further provide at is required. It is a mistake to nk the laburnum not hardy. There fair specimens met with here and ere, standing well out in open situa- ns, and these flower every season. rserymen ship away large lots of em annually, showing a wide distri- tion; and no doubt in situations near lakes many a nice specimen could found.

A Perennial for a Shady Place.

It must not be entirely in the shade; but a position shaded for the better part of the day, if open, suits the old perennial, Lamium maculatum, very well. Underneath trees, as the term is generally understood, is not the place for it. But if the branches of the tree are well above ground, so that light and air can freely enter, it is all right. Besides that it is dwarf and spreading, its leaves, with their central white stripe, are attractive; and then there are the heads of purple flowers, from Spring until September, or even later, in damp Autumns.

A golden-foliaged sort, not often met, is a beautiful rock plant.

Keeping Seed Beds Damp.

The drouth in Pennsylvania, existing at this writing, May 20, is uncommonly severe, and all small stock in nurseries is suffering greatly. The Spring opened quite wet, and rains were so frequent that planting operations could be carried out only at great disadvantage. Because of the excess of water then all large stock is looking well, as at a depth of a foot or so there is a lot of water in the soil. But small stock, the roots of which are but a few inches underground, is in a bad way, and as to Spring-grown seeds of evergreens and deciduous stock there will be but few of them appear above ground as plants. Wherever it can be done, it will pay well to water such seed beds, and, better still, to cover them in some way with shading. Forest leaves form the best kind of shading, and can be kept in place in many ways, being easily taken off when the seedlings appear.

Many seeds, especially those of a hard nature, such as of the cercis, robinia, chionanthus, cornus, etc., may be left undisturbed if they do not grow. Very many of them will sprout the second season.

At this season of the year, if a good watering, keeping the soil damp for a week, does not cause the seeds to grow, it is pretty good evidence that nothing will bring them this season, except it be the hickories, which are always very late in sprouting.

Japanese Maples.

Though there are many other maples from Japan besides those of beautiful foliage, the latter kinds are meant when the term Japanese maples is used. The common blood-leaved one—polymorphum atropurpureum—is preferred, although the dissectum atropurpureum is close to it, indeed, equal, in the estimation of many. The blood-red color is as pronounced in the latter as in the former, but as the leaves are so finely dissected there is less surface of red than those of the atropurpureum displays. Both of these kinds exist in green form as well as colored, and the green ones must be had when making a collection. There are many other sorts with pretty foliage, some of more attraction in the Fall than in Spring; but the two purple-leaved ones, or blood-leaved, rather, are the best for Spring. In the class with many other trees and shrubs of the same character, just as the foliage is fairly perfected, is the best time to see them. Later on, the blood-red color fades, though some is retained all the season through.

Although the color is best when the plants are in the full sun, the foliage is more lasting if in a position where the afternoon sun does not strike them with full force.

The increasing of this class of maple is brought about by grafting, layering and inarching, using the common green one as a stock.

As pot plants, nurserymen find a good sale for these maples. The sight of some large specimen on some one's lawn in full display sends other people on an errand to buy one. It is too late then to dig it, but the one in a pot, or tub, is the very thing wanted, and finds sale quickly. They are capital cemetery plants, and for Memorial Day sales would find ready purchasers.

Double-Flowered Horse Chestnut.

It is true that when in hot soil and situation the leaves of horse chestnuts suffer in Summer, but in spite of this the luxuriance of their Spring foliage and their noble panicles of flowers are full compensation for this defect. And then in these days of the application of fungicides it is apparently within one's power to prevent the disfigurement of the foliage in Summer, which happens to almost all of these trees in the situation referred to. As proof that the trouble with the foliage lies with unfavorable locations, look at the vigorous, healthy foliage exhibited on trees on lawns, where the sod keeps the soil cool and breezes have a chance to circulate!

These remarks were not anticipated when commencing these notes, but they lead up to a commendation of the double-flowered horse chestnut, which the sight of some fine trees of them always seems to call for from me. In one way, they are perhaps no more charming than the single flowered ones, but in another they certainly excel, which is in this that the flowers are more lasting. This feature will be found common to all double flowers as well as to the horse chestnut. Another reason influencing some is that double-flowered ones produce no seeds, so there would be no shells and nuts to throw away.

For some years there was supposed to be a double red variety as well as the double white, but this belief has proved erroneous; at least there seems no such a one in American collections. The only red is the single one, rubicunda. There is also a single red buckeye chestnut, but it is little more than a shrub. It is Pavia rubra.

Single horse chestnuts and pavias are propagated from seeds rapidly enough, but for double forms and for rubicunda, which rarely seeds, budding is generally adopted, using for stock thrifty young trees of the common European one, hippocastanum.

New York.

e Week's News.

This city has been celebrating its 0th anniversary this week, and all blic buildings have been gaily dec- ated with flags and bunting. Several lumns were erected in front of the ty Hall building, and a few yards of ergreen roping were wound around em, that being, so far as our observa- ns went, the only bit of florists' aterial employed. It is a pity that r City Fathers could not be per- aded to use more green material at ch celebrations. There is a great nount of money devoted to such pur- ses now and again, and it seems that e florists should be able to get on e inside when the contracts are given it, and it would be a benefit to both e trade and the decorations.

Retail business is rather quiet at esent. Memorial Day does not affect e city stores nearly so much as it es the stores located in the outlying stricts. The principal flowers used r window display are peonies, the ipply of which is quite ample, the ottage Gardens, Queens, N. Y., being e greatest contributors of this flower the market.

Members of the New York Florists' lub will confer a great favor on the ting committee if they will help ong the committee's work by sending their five dollars for the ticket, one which has already been mailed to ch member. It is absolutely neces- ary that the committee have some nds on hand, and if members who in- nd journeying to Witzel's Point rove on July 1 will only forward the sh at the earliest opportunity to Mr. . H. Traendly, 38 West 28th street, it ill help to facilitate matters a great al. That the outing will be a grand ccess is a foregone conclusion. The hedule of sports is larger than ever efore, and there will be plenty of thletic events to please everybody. he program is already in the hands f the printers, and will probably be ady for distribution at the next club eeting, Monday evening, June 8.

Henri Beaulieu, Woodhaven, N. Y., urned three fingers of his left hand uite severely a few days ago while andling kerosene oil. He is trying to iscover why the other two fingers ere not also burned.

Owing to Memorial Day occurring his week, only one sale was held in Villiam Elliott & Sons' auction rooms, hat being held on Tuesday. Roses, eraniums, cannas, trained larch trees, nd hydrangeas were offered in quan- ities, as were also all kinds almost of oft-wooded bedding plants. There was large attendance at the sale and ood prices were realized.

On Tuesday next, June 6, occurs the ale of the specimen palms, etc., from he establishment of David Clarke's ons. This stock is reputed to be in ery fine condition, and should bring ut a crowd of bidders.

Recent contracts for greenhouses to e erected by the Pierson-Sefton Co. nclude houses for Richter & Barton, r. Ward, H. McKay Twombly and J. oremus, all of Madison, N. J.

J. Fotheringham, the well-known raveling salesman for F. R. Pierson o., will, we are informed, join the atrimonial ranks sometime during he month of June.

The Pierson fern has no doubt chieved a greater success as a horti- ultural novelty than has been accord- d to any other fern or decorative lant. The demand for this fern has xceeded all expectations, but, with the mple resources at command, all or- ers are now filled to date, and there re several houses of 2¼-inch pot lants that are ready for immediate elivery. As is well known, Mr. Pier- on devoted the whole of his Tarrytown ange of glass to the cultivation of Nephrolepis Piersoni, but the entire upply was consumed by the advance rders that came pouring in for early Spring delivery. A number of the tock plants are being grown into pecimens, which, by the time Autumn rrives, will be grand subjects for large etail work. There is little room for oubt but that it will pay to grow this ern for cut purposes. The large ronds, when fully developed, make a eautiful green, very suitable for lay- ng on the cloth for a dinner table dec- ration, and a green that will not wilt efore the dinner is over.

Holland Bulb Prospects.

Many growers who were caught napping by the November frosts lost a large portion of their hyacinths, but those which escaped are doing well, and a good crop in many cases is hoped for. There will be an advance in "first size" hyacinths, and other sizes will rule slightly higher than usual. Yellow, white, and pink tulips will be cheap and plentiful, but scarlet, red, and striped are rather scarce, and will rule high. On the whole, tulips are better than was expected, and samples just lifted appear satisfactory. They will be ready for lifting a fortnight sooner than last year, as owing to the mild weather in March they started growing very early. Crocus will be a trifle dearer, polyanthus narcissus very much dearer, and English iris very scarce indeed. Horticultural Advertiser, England.

Eremuri at Riverton, N. J.

One of the most interesting featur of the hardy flower garden during tl past two weeks has been Ermur robustus and E. himalaicus. The la named was the first to open its pu white flowers on a densely crowd spike nearly 4 feet high. The flowe which were borne in great profusio occupied about 16 inches of the ste and were fully an inch across. B the most stately of the two was robustus. It commenced to open i flowers nearly a week later than himalaicus, and overshadowed the la ter in height by nearly 3 feet, with flowering raceme very nearly 3 feet length. This is a truly magnifice plant and won the admiration of who saw it as from day to day it u folded its large delicate pink flowe fully an inch and a half across, in a b of nine flowering plants. The show still carried on. Among the gro was one with white flowers. There a little intricacy about the culture management of these plants whi must be learned, or failure will resu In my first experience I thought I h an ideal spot, and studied to give the the care recommended in gardeni literature. My plant survived the Wi ter and came up good and strong the Spring, but for some yet und covered reason it rapidly melted pr maturely away, roots, leaves and al

In my second venture I selected rather open spot in a plot of grou nearly enclosed by a hemlock hed The ground was deeply and thoroug spaded and a good liberal dressing well decayed cow manure was incorp rated with the soil. Additional soil w added to raise the bed some 4 to inches or so above the level of the su rounding soil. This was kept in po tion by a frame of hemlock boar The soil being naturally a rich san loam, was nicely leveled off and this was placed the roots, or crowns, the plant, which are peculiarly co structed. The large, fleshy, brit roots, sometimes nearly 2 feet long, a horizontally thrown out from a ce tral crown, like spokes from the wh of a wagon hub; hence, to preve them breaking the surface of the s must be both firm and level. Then took a small stake and put it down near the crown as I possibly could indicate its position and so prevent being damaged. Afterwards they we nicely covered over with 3 or 4 inch of finely pulverized soil and light firmed, then covered over with so loose material, such as long stra manure, or, better, some loose stra The crowns of the plants must be pr tected from any stagnant or excessi moisture, and I find the best, easie and quickest method of doing this to put a sash over them which w readily throw off water, but so a ranged as to admit air. This prote tion seems very necessary, as tl plants are very impatient of bo damp and moisture. They seem grow slowly during the Winter, a by very early Spring they are sendi up their large, strong folded leaves, o of which rise the tall stately spik of beautiful flowers.

The advent of Spring, however, do not seem to relieve one's cares of th class of plants, for both cold win and late frosts are disastrous. Th plants must still be jealously guarde and protected till both of these da gers are passed, or their beauty wi be very much marred by disfigure foliage, if they are not prevente from flowering. To many this will ap pear lots of trouble, but I am full satisfied that the pleasure and satis faction derived during their bloomin period more than pays for the troubl

E. himalaicus is from the Himalaya and E. robustus from Turkestan, bu both wintered under the condition named and both should grow ver much taller. This, however, coul hardly be expected this season, as the were not planted till about December I think early October planting wou have given far better results.

The ermuri grow very slowly fro seed. They take nearly one year t germinate in our climate from im ported seed, and, they say, from five t seven years to become flowerin plants, so if the price does seem hig get good flowering plants to start with

If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN,** although it has been cultivated many years, is still scarce. As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there will be no change in price this season.

We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

CANADIAN NEWS

STRATFORD, ONT.—A. B. Cutting has resigned his position as assistant horticulturalist at the O. A. C., Guelph, and has left that city for Florida, Georgia and other States in the South, where he intends studying and investigating the various systems of handling, storing and shipping Southern fruit and vegetables. He will return after about three months' absence to resume his studies at the college. Mr. Cutting is making this trip to fit himself more thoroughly for a position which he has accepted in the Argentine Republic.

Hamilton.

All night long on the 26th inst. we had a splendid rain, which wet things clear to the roots. A great many rains seem to divide here at the head of the lake, going farther Niagara Falls way or towards Toronto; it has occurred once or twice this season already. Nothing seems to have been much hurt by the drouth, but considerable planting has been delayed, the ground being so very dry.

Bedding plants are in greater demand than ever before. The old boys' reunion this Summer is creating a great demand for plants of all kinds.

The next meeting of the club will occur June 2. I understand there is a proposition to hold a rose exhibition. As the rush of bedding is now past, a good meeting is expected.

BEAVER.

TORONTO.—The continued run of good business is making most of the boys quite cheerful, and the splendid rain we are now having will help along Summer crops nicely. Carnations in the field were having a rather hard time, for the ground had got to be very hard and dry, but a good, steady rain, during the last few hours, has put a different face on nature, and everything outdoors appears to be flourishing.

The Ontario Jockey Club races have brought a large number of visitors to town, and there has been a splendid demand for decorative material and cut flowers. Roses are still very good and cheap. Outside lily of the valley is extra fine and plentiful; and carnations, while still very good, are now in oversupply.

There died here last week one of Canada's oldest lady florists in the person of Mrs. S. Tidy. She was well known to all the old-time gardeners and florists here, and was always highly respected by all. Mrs. Tidy was an Englishwoman and came here years ago with her husband. They started a florist's business about 30 years ago, which has been successful. The old lady ran one branch of the business until about two years ago, when failing health caused her to give it up. She was of strong, sterling character, and her influence will be felt for many years by her family and friends.

The May meeting of the Gardeners and Florists' Association was rather a small one, and not very much business was done. Those who did attend spent a very pleasant hour after the business was put through. The president, Wallace Wood, was married to Miss R. Gardner, of this city, on the 20th inst., at Holy Trinity Church. A great many of their friends were present. Mr. Wood is very popular, and we all wish him and his wife the greatest happiness. T. MANTON.

OUR PRICE { $2.50 per 100.
$21.00 per 1000.

WEBSTER BROS., Plantsmen, Hamilton, Canada.

Mention the Florists' Exchange when writing.

Seed Notes

MONTREAL.—As far as vegetable and farm root seeds are concerned little or none are saved here. Timothy is grown and saved very extensively and the long-continued drouth (40 days or more) will make it a very short crop unless rain comes immediately. We had a frost Sunday night, cutting tomatoes, beans, corn, cucumbers, as well as early potatoes in many places.

WM. EWING & CO.

TORONTO, ONT.—It is rather early yet to say much about the condition of crops. The season, however, has so far been comparatively warm and crops generally are looking healthy, but owing to very light rain fall, the growth to date is not as rank as usual at this season of year.

THE STEELE BRIGGS SEED CO., LIMITED.

Boston.

Review of the Market.

During the early part of the week the supply of flowers fell off very considerably, thus placing the market in a better condition for the increased demand of Wednesday, when the first of the Memorial Day rush began with the wholesalers, who were kept very busy all day. At this time stock was in good supply, though not overplentiful, as has been the case for weeks, and prices advanced somewhat. From present indications a very fine business will be done this year, with an ample supply and good prices. Many of the out-of-door flowers, usually so plentiful, will be scarce this season, such as lilacs, deutzia, etc.; but snowballs, rhododendrons, peonies, etc., will be in good supply. There is also a sufficient supply of candytuft, stocks, feverfew, antirrhinum and such useful things coming in.

Carnations shortened up during the first two or three days of the week, but by Friday will undoubtedly be in good supply, though at better prices than have prevailed for weeks. At present writing, Wednesday, good carnations average $1.50 per 100, with fancies at $2.00 to $3.00.

Good roses are not so plentiful, though there is a heavy supply of small and medium stock for which the demand is usually much heavier for this week's work. The best grades of Bride and Bridesmaid make $8.00 per 100, while the finest Souvenir du President Carnot and Kaiserin Augusta Victoria go to $10.00. Smaller grades of all these roses range from $1.00 to $5.00. The best American Beauty make $20.00 per 100, with medium and shorter ones graded at from $12.00 and $16.00 down to $4.00.

News Items.

Owing to Decoration Day the last regular meeting of the Horticultural Club, which was to have been held Thursday of this week, has been postponed until next week.

The rhododendron exhibition of the Massachusetts Horticultural Society will be held on Friday, Saturday and Sunday, June 5, 6 and 7. In addition to rhododendrons, prizes are offered, under the H. H. Hunnewell Fund, for hardy azaleas, and the Society's prizes for German irises, hardy pyrethrums, hardy ornamental trees and shrubs, vase of flowers, native plants and vegetables, as well as for a display of orchid plants arranged with foliage plants.

Charles Evans, of Watertown, expects to sail for Europe next week.

Albert Roper, of Tewksbury, had a new seedling carnation at the market Saturday, which "looks good." It is a "Fair Maid" seedling, the other parent also having the Fair Maid blood in it, being a white seedling from that fine variety. The new one is almost identical with Fair Maid in habit and color of flower, but the bloom is built up well and full at the center, being much more double than the parent.

WEST GROVE, PA.

Mention the Florists' Exchange when writing

Rex Begonias.

After the rush of bedding stock is over the propagating bench is often left practically idle. It can be put to good purpose in the propagating of rex begonias. Struck now they will make nice sized plants before Fall. A sharp, clean sand is the most suitable propagating material, as with this, when water is applied, it will quickly drain off. In many establishments they depend on propagating these plants under the benches, on ashes, or whatever material happens to be available; but this is rather a slipshod method, and it is greatly a game of chance if a fair percentage of plants is produced from the leaves put down. With a few of the older varieties from which plenty of leaves can be procured, it may be all well enough; but where newer or scarcer sorts are concerned, the propagating bench, where they are perfectly under control, is the safest method for insuring profitable returns.

With the newer varieties, where it is economy to use the whole leaf, the selection of well matured leaves is an important point. The strongest nerves of the leaf should be cut before laying on the sand (cutting on the under side), and a few small pebbles placed on top of the leaf will help to keep it in the desired position. The sand should be kept well moistened, but not over-wet, or there is danger of considerable loss through damping. The house should be kept well shaded, and the atmosphere rather close. If conditions are suitable, growths will soon begin to appear on the surface of the leaf which, in the course of a few weeks, will mature into plants large enough for the first potting.

For the older varieties, when plenty of leaves can be obtained, a much more speedy process is to cut away the greater part of the leaf, leaving only a little of the base and about an inch of the leaf stalk. These are inserted in the propagating bed, like a geranium or other ordinary cutting. Roots are soon produced from the end of the leaf stalk, and growths will start from the base of the old leaf, making plants much quicker than when the whole leaf is employed; but, of course, only giving one plant for each leaf inserted, where from each of the whole leaves put down several plants are produced. Thumb pots should be the first used. For this potting a good compost is one of equal parts loam, leaf mold and sand, which should be finely sifted. The propagating house will be the best place for the little plants. Until they have got a good hold of the new material the conditions regarding atmospheric moisture and shade may be kept much the same as before; but once well established more air and a little more light will be beneficial.

For subsequent potting the soil may be made a little heavier and slightly enriched by the use of some well-rotted cow manure. For the general treatment of the plants once well under way, heavy shading and too much atmospheric moisture should be avoider, or the plants are apt to become drawn. But moderate shade is necessary to prevent burning, and retain the more delicate tints of the foliage.

PLANTS and FLOWERS

CANNA, SETH LOW.—Otto Grundmann, florist, Secaucus, N. J., sends us some flower spikes of his new canna, Seth Low. This variety should be a welcome addition to the dark foliaged section of cannas. The leaves are dark and distinct, and the flowers are of a good red tone, making a combination rarely found in this class of cannas. The segments are also of a good average size, and the blossoms are borne in profusion. It would seem that in Seth Low, Mr. Grundmann has originated a canna that is ornamental from either a flowering or a decorative standpoint. The variety, he says, is a cross between J. D. Cabos and Charles Henderson.

THIS WEEK'S SUPPLEMENT.

Magnolia Stellata.

The beautiful and grand display which magnolias make in early Spring is one of the wonders beheld by those who visit us from foreign lands. Besides the magnolias native to our shores we have culled from all climes all the sorts obtainable. Japan and China are to be credited with the most of those so attractive in early Spring, of the class which flower before the leaves appear. We had nearly said all the kinds, when the thought of the many hybrids and varieties raised in France, Belgium and our own country came to mind.

One of the gems of the collection of those flowering before the leaves appear is M. stellata, the earliest of all, and one which is unusually profuse of bloom. Not only has it these merits, but the flowers are sweet scented to some degree, and are semi-double. Still another recommendation is that before expanding the buds are of a light pink, a color remaining with the flowers to some degree after they expand. This pink shade enhances the beauty of the whole, with some flowers open, others in bud, and still others bursting.

There are two bushes shown in our illustration, one somewhat behind the other. Our artist caught them just as the whole of the buds were expanded, and before many of the flowers had fallen.

There is no use saying how many flowers are on the bushes. Our readers can judge if there are not thousands of them. The bushes are about 10 feet in height, and stand in Fairmount Park, Philadelphia, near the Horticultural Hall. The photograph was taken about the second week in April last.

One other merit commending this species to everyone is that it flowers when so very small. It is easily raised from layers, made from little shoots prepared in Summer, and these layers, rooted by Fall, will nearly always flower the next Spring, and it need not be said every Spring thereafter.

A position on a lawn, similar to the one afforded here, is the most suitable place for this magnolia. In April the grass is green around it, which makes contrast to the flowers. Do not place it where a light background will be given, such as a wall of white stone makes. If the wall be ivy-covered, to furnish green background, it would be the very thing. Such a mistake is not uncommon with many flowering shrubs and low growing plants.

This species, M. stellata, was known in cultivation for a long time as M. Halleana, and, in fact, is so known and listed to-day by many nurserymen. It is a true species, from Japan, not a variety, as is Soulangeana, Lennei, Norbeitana and some others. It is to be especially recommended for its early flowering, being the first shrub of all to bloom of those having such large flowers. It is in advance of the golden bell, a shrub, the flowers of which are usually looked on as proclaiming Spring. By planting it in a warm nook M. stellata is often in bloom with us in the first days of April.

JOSEPH MEEHAN.

Luther Burbank Honored.

Luther Burbank, Santa Rosa, Cal., the "Wizard of Horticulture," has received the semi-centennial gold medal for the California Academy of Sciences.

The award of the honor to Mr. Burbank was made by a committee consisting of William H. Mills, Professor Wickson, of the University of California, and Hon. Ellwood Cooper, president of the State Horticultural Society. The medal is donated to the society by former Mayor James D. Phelan, and is awarded semi-centennially to the person who has advanced the interests of agriculture to the greatest degree by the application of scientific principles and by his investigations.

The medal is inscribed as follows: "California Academy of Sciences. Awarded to Luther Burbank for meritorious Work in Developing New Forms of Plant Life. May 18, 1903. 1855-1903." Figures of Pomona and Flora crowning with a laurel wreath a man engaged in budding a young fruit tree occupies the reverse side of the medal. Santa Rosa's citizens are greatly pleased by the distinction which has come to Mr. Burbank.

The Late Alfred Bridgeman.

The death of Alfred Bridgeman, formerly a seedsman of New York City, which occurred on Wednesday, May 20, at his home in Newburgh, N. Y., removes one more of the few links now remaining that connect the old with the new horticultures of America. He formed one of the galaxy of famous men who laid the foundation of the industry, whose names shall remain imperishable in horticultural annals, taking his place on the trade's roll of honor with Henderson, Elliott, Buchanan, Wilson and others of the pioneer horticulturists who all have crossed the bourne.

It is particularly interesting at this time, when New York City is celebrating the two hundred and fiftieth anniversary of its incorporation, to recall the condition of Manhattan when Mr. Bridgeman and the others named first began operations in their chosen calling. In his boyhood days a creek set in from the Hudson River at what is now Tenth street, and went up as far as Broadway, or the Bloomingdale road as it was then called. Often when down at what is now 21st street, then called Lovers' Lane, the boys went in to swim in the Hudson. Union Square has been cut down twenty feet since Mr. Bridgeman was a boy, and between 16th and 17th streets there stood in Union Square the old Spingler farmhouse, in front of which was a large country store, with hay scales at the door. The old Spingler farm included the ground from 14th to 18th streets. Where Arnold & Constable's store now is there was a large sugar refinery—on the Bloomingdale road side—and on the Fifth avenue side was a duck pond.

Mr. Bridgeman retired from the seed trade several years ago, but his name is still retained by the owner of the 19th street store.

The deceased gentleman took a great interest in church matters and for a quarter of a century and till his death held the position of trustee of the First Presbyterian Church of Newburgh. He was president of the Society for the Prevention of Cruelty to Children for eighteen years, and for a similar length of time was treasurer of the Society for the Prevention of Cruelty to Animals.

Full of years he has been called to his rest, having served his day and generation faithfully and well.

The French Bulb Situation.

Editor Florists' Exchange:

I read with interest the article, entitled "French Bulb Situation," in your issue of May 16. I also noticed in The American Florist, issue of May 23, a criticism on your article. It seems to me, however, that the position the writer of the "French Bulb Situation" takes is pretty nearly correct.

I know, personally, that florists are not buying French Roman hyacinths in anything like the quantities they did a year ago. One large florist, who usually buys from fifty to one hundred thousand, recently told me he could not afford to plant, as he could not make profit out of French Romans, if they cost him more than from $24.00 to $25.00 landed at his place.

More than one of the largest bulb dealers in the United States have informed me that their experience this year, in the matter of French bulbs, is practically the same as my own.

It may be that the two writers view the situation from different standpoints, and have conflicting interests. Allow me to suggest that you ask your readers, who are growers, for an expression of opinion as to what they can afford to pay for White Roman hyacinths of 12 to 15 centimeters and make a reasonable profit under average conditions. Also, if the present prices continue to obtain, what proportion of their average planting are they likely to make this season.

I think that information of this kind would be of some service to most of the importers this year, and perhaps show the Frenchmen what they may expect in the way of business.

ARCHIBALD SMITH.

Boston.

P. S.—Has the critic sent his order for the usual number at the 100 franc price?

World's Fair Rose Garden.

A million roses will bloom at once the vast rose garden at the World Fair, St. Louis. That is guessing, course, but the foundation of the gue is this: Four acres are set to stro and vigorous rose trees. Thirty of t largest exhibitors have sent the choicest stock and each will strive f first place in the judgment of the ju and people.

This vast rose garden, with its 50,0 rose trees, lies east of the great Pala of Agriculture. The planting was b gun early in April. The garden occ pies one of the conspicuous sites in t City of Knowledge. The center of t garden is at the main entrance to t Palace of Agriculture, a grand stru ture 1,600 feet long and 500 feet dee It is on a high elevation overlooki the group of main buildings of the E position, and, looking to the northea a splendid view of one of St. Lou most attractive residence districts spread out before the eye.

When the graders finished their wo and turned the site over to the ga deners, every vestige of soil had be removed, and a broad expanse sticky, yellow clay remained. T ground was platted with a series eight collections, forming a great ova 150 feet long and 100 feet wide, as t central picture. In the center of th oval is erected a statue of the Godde of Flowers, in heroic size. Flanki this oval on the north and south a two great collections, triangular form. Scores of other collections la out in plots of ground in vario shapes, but all conforming with t general harmony of the main pictu have been provided.

Each collection, while separate a distinct in itself, forms a part of great and artistic whole, and a belt beautiful green lawn, from four eight feet wide, surrounds each colle tion. Spacious gravel walks are pr vided throughout the entire four acr of roses, and at various intersectio beautiful fountains, sending streams of water and cooling the a mosphere, are to be met. Seats to a commodate thousands of visitors ha been provided and the seats are distributed as not to interfere wi the free passage through the garde of the countless thousands who w revel in the glorious sight.

For each collection excavations inches deep, of the form and size r quired for the collection, were dug the sticky clay soil. Then the excav tions were filled in with rich top so and sandy loam. A dressing of fe tilizer, of the kind best adapted to t requirements of the particular ro tree collection, was spread and the came the work of putting in the youn plants.

Most of the 50,000 roses now plante are of the hardy or semi-hardy vari ties, but many of the varieties th are not supposed to stand the rigors a St. Louis Winter are among th specimens shown.

The planting of this mammoth ros garden was done under the persona supervision of Joseph H. Hadkinso who, under Frederic W. Taylor, Chie of Agriculture, has charge of this out door exhibit.

Carnations Planted in 1903.

We present on pp. 622-3 a table show ing the varieties of carnations plante in the field the present year, compile from information received from th principal carnationists throughout th country.

Though not as complete as we woul have liked it to be, owing to the fac that several of the growers addresse failed, to date, to respond to our in quiries, still the table furnished is no without value. It gives a fair representation of what are considered the best varieties for commercial purposes, each one's especial merit in the opinion of the planter being demonstrated, more or less, by the number set out.

We tender our thanks to the firms who have given so freely the data we were in quest of.

"American Gardening" has been pur chased by Messrs. Thos. B. Meehan, of Germantown, Pa.; C. L. Yates, Rochester, N. Y.; James McHutchison and D. W. Wittpenn, of New York City. The publication will be continued in New York City on much improved lines, with Leonard Barron as editor. It is expected that the first number under the new regime will appear Monday, June 1, 1903.

Obituary

Harry C. Harris.

In the death of Harry C. Harris, which occurred at Carlsbad, N. M., on May 14, 1903, Colorado City and the trade have lost one of the most enthusiastic horticulturists in the West. Four years ago, Mr. Harris, who had, prior to that time, devoted considerable time and effort to the improvement of sweet peas and other annuals, of which he raised a very large collection, founded the El Paso County Horticultural Society, and had ever since been its president and the most active worker among its membership. The society has attained great proportions during the few years it has existed, and now numbers among its members some of the most wealthy and influential people in Colorado. Both owners and employees have ably assisted the work carried on under the direction of Mr. Harris.

A delegation of the society met the train at the depot and conducted the remains to his former home. Loads of plants and cut flowers of all kinds were massed about the casket and in the main rooms of the house.

Mr. Harris left Colorado to assume charge of large properties in the fruit belt of New Mexico, known as Pecas Valley. Not long ago, in making his rounds of inspection, he was thrown from his horse and, in addition to a broken leg, sustained a fracture of the skull which resulted in death.

The funeral was held Sunday, May 17, from the First Presbyterian Church, which was beautifully decorated. The casket was covered with wreaths of orchids and several carriage loads of designs were arranged about the bier and on the front seats. Sweet peas, the favorite flowers of Mr. Harris, were in great profusion, orders having been sent to Denver and Pueblo for all that could be obtained.

Alfred Bridgeman.

As mentioned in last week's issue, Alfred Bridgeman, a pioneer seedsman of New York City, died at his home in Newburgh, N. Y., on Wednesday, May 20. The funeral was held on Friday afternoon, interment being in Cedar Hill Cemetery.

Alfred Bridgeman was born at Kimbery, near Oxford, England, June 6, 1818. His mother lived to reach the unusual age of one hundred and two years. Mr. Bridgeman's parents came to America in 1820, bringing with them five children. In England the elder Bridgeman had been a manufacturer of sail cloth and filled large contracts for the Government during the Napoleonic wars. The wars over, his father for a little while was engaged in some East India trade. This not proving profitable, the family came to this country. Four more children were born in America.

After settling in the United States, the father took up floriculture and agriculture, and for those days became quite prominent as an author of some essays and small books on flowers and kindred subjects.

Alfred Bridgeman, when eighteen years of age, thought of going with a classmate to Houston, Texas, but his father offered him an interest in the business when he should become twenty-one if he would remain at home and devote himself mainly to the study of floriculture. He decided to accept his father's offer and the elder Bridgeman bought four acres of land on Broadway, New York, between 18th and 19th streets, extending back to Third avenue, crossing Fourth avenue, then called the Bowery. Broadway at that time, about 1838, was known as the Bloomingdale road. The father died in 1850.

In 1842 Alfred Bridgeman bought out the nursery part of his father's business, and in connection with it established a seed business. In 1848 he bought in what is now known as Astoria, in the Borough of Queens, five acres of land to carry on his business. In 1853 he bought from his father's estate the entire business. In 1869 he went to Newburgh and bought from Charles Downing his nursery property on Grand avenue.

THE LATE ALFRED BRIDGEMAN.

Mr. Bridgeman was married in 1846 to Martha King, of Brooklyn, a daughter of Gamaliel King, a celebrated architect and also a legislator. He designed the Academy of Music and other public buildings in the city of New York.

Mr. Bridgeman had five children. Their mother died in May, 1898.

Deceased was a trustee and afterward, for many years, the president of the Cedar Hill Cemetery Association, in which from the very beginning he took a very active interest. Very much of the improvement to the cemetery in the way of arboriculture and the adornment of the grounds generally were due to his taste and experience. He was also connected with several financial and other institutions. He served for six years as first lieutenant in the Third Artillery of New York State when William H. Seward was Governor and Rufus King was Adjutant General.

As for his extensive business interests in New York City, Mr. Bridgeman rented his Astoria property to a firm of German florists. He gave up his Broadway store and went to the 19th street store, where business is still conducted.

Mr. Bridgeman having been reared in New York had many interesting reminiscences of the city as he knew it when a lad.

Three years ago a beautiful illustrated book was published on the occasion of the 75th anniversary of the founding of the seed house.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange will publish every week voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

Bobbink & Atkins, Rutherford, N. J.—Our advertisement covers this week two consignments of palms, bay trees, araucarias and ficus, which we have received within the last two weeks. These consignments are the largest that have ever been brought to America by one firm in two shipments. The stock filled four lighters and fourteen cars. It has arrived in splendid condition and is worth any one traveling from California to Rutherford to see.

C. A. V. Frith, Hamilton, Bermuda, says: The Lilium Harrisii crop will be 30 to 40 per cent. below the average in quantity the coming season. I am pleased to report that my bulbs are in a thrifty condition, and promise a fair crop, owing, I think, to careful selection of stock and good cultivation.

A. & G. Rosbach, Pemberton, N. J., say: We call attention to the fact that we have been growing Semple's asters for a number of years, and by proper selection and making a specialty of this line are in position to serve patrons in the best manner in large or small quantities.

John Scott, of Brooklyn, N. Y., says: The Nephrolepis Piersoni which has been advertised at $30.00 for sixty should have been $30.00 for FIFTY. See corrected advertisement in this issue.

I would also like to say that my cannas are in first-class condition.

Important Notice.

The exhibition of the Chrysanthemum Society of America will be held in the Herald Square Exhibition Hall, Herald Square, New York. This is a new hall, with an abundance of space and magnificent light, and most centrally located. Intending exhibitors will please note the change in the place of holding the exhibition.

FRED H. LEMON,
Secretary C. S. A.

Hail Notes.

The establishments of J. C. Rennison and J. R. Elder, of Sioux City, Ia., were struck by hail on May 18. The Florists' Hail Association will have to pay for about 20,000 feet of glass.

The American Peony Society will meet at the Hotel Cadillac, Detroit, Mich., on June 11, 1903, at 7.30 p.m.

DENVER, COL.—The Grand Junction Seed and Nursery company has been incorporated; capital, $30,000; G. J. Carpenter, John E. Moore and Frank R. Davis are the incorporators; principal office, Grand Junction.

QUESTION BOX

Clianthus Dampierii.

(114) Can you give me any information on Clianthus Dampierii? I have sowed some seed of Dampierii and puniceus, and what I want to know is, can Clianthus Dampierii be grafted on puniceus; and how large has C. Dampierii to be before cutting it off for grafting. How long will it take the cion to unite? What kind of graft is most used? Is a rose house temperature too cool for it? J. R.

—Clianthus Dampierii will unite with C. puniceus. The latter should be not less than one-eighth of an inch diameter in the stem before being used as a stock. The cleft-graft will be found the best. The cion should consist of the tops of the seedlings at any stage after the first leaves appear. Greater care is necessary when the seedlings are used as cions, with only one or two leaves, besides the cotyledons, than if a piece of a well-developed branch is employed. The union will take place within three weeks if the grafted plants are kept in a close and shaded frame. G. W. O.

Snails Attacking Carnations.

(115) J. L. O'Q. & Co.—Evidently it is snails that are eating the carnation buds; and it will be advisable to give the surface of the soil on the benches a good dressing with air-slacked lime, repeating the same every few days. It will also be well to take a lantern at night and look over the plants closely, picking off the snails found and destroying them.

Brown Spots on Violets—Aphis on Roses.

(116) R. H.—We can hardly determine what is the cause of the violet leaves becoming spotted, from the meagre information supplied. It will be well, however, to pick off all the affected leaves. For the thrips that are infesting the roses, syringe well with Ivory soap and water, once a day, until the bushes are perfectly clean.

Solanum Capsicastrum.

(117) Enclosed please find a plant of Solanum capsicastrum. We have quite a number of them and are now shifting them. Please let us know how to treat them, so they will produce berries by Christmas. Shall we allow them to blossom now or cut them back? W. & N.

—The Solanum capsicastrum does not require to be grown in pots all Summer. A much better method is to plant them outdoors, let them grow naturally, without any pinching, and they will make nice bushy plants. In the Fall, when the berries are set, and the nights begin to get cool, lift and pot the plants carefully; shade them from the sun for a few days and they will be all right for Christmas if kept in a moderate cool house. These plants are apt to become infested with green fly too much, if grown in a greenhouse all Summer.

Queen of Edgely Rose.

(119) Can you give me any information regarding the Queen of Edgely rose, its forcing qualities, and demand for the flowers? W. A.

—The Queen of Edgely is a good forcing rose about equal to the American Beauty, which it resembles in all respects but color, being much lighter than that of American Beauty. Since this rose has been placed upon the market the demand for the flowers has been pretty fair, better than last year, especially in Philadelphia and Boston, where it is seen in the largest quantities. To grow this rose successfully give it the same treatment as American Beauty. PENN.

BRIEFS FOR BUSY FLORISTS.

CINERARIA STELLATA.—This cineraria is well adapted for the purpose of commercial growers, either for cutting or for decorative work. This is a good time to sow a packet of seed. When the seedlings get large enough to handle, put them into small pots; and if a frame with a northern aspect is available, grow the cinerarias there during the warm months, potting them along whenever necessary. So long as the soil used is rough and porous, the plants will grow and thrive; but should a fine soil, that is liable to pack together, be used, there is not much chance of success. When well grown, these cinerarias will have a flower spread of two or three feet, and are a very welcome addition to our Spring flowering plants.

PRIMULAS.—If the seed of these has not yet been sown, no time should be lost in doing so. Give the soil a good watering a few hours previous to putting in the seed, then there is no danger of washing the seed out of place.

POINSETTIAS. — The old plants, from which a batch of cuttings can be taken later on, may now be planted outdoors. See that they get a little water occasionally, and do not allow the young wood to get too hard before the cuttings are taken, as they do not then root so easily.

CHRYSANTHEMUMS. — For plants that are required to flower in six or seven-inch pots, the present week is a good season to put in the cuttings; and if kept moist and heavily shaded, there will be no trouble in rooting them, even should the weather be unusually warm. Planting on the benches is now in order, and when putting in the soil, the percentage of manure need not be so large, as the feeding can be done later and to better advantage when the plants have exhausted the soil somewhat and are growing freely.

VIEW IN SCOTCH ALPINE GARDEN

Showing good clump of Iberis superba

PANSY FIELD OF PETER BROWN, LANCASTER, PA.

Begonia Gloire De Lorraine

This is one of the most useful of our Winter-flowering begonias, and well worthy of the attention it requires. To have good plants to flower by the month of October, cuttings should be put in at once. Choose good, sturdy cuttings from the base of old plants, top cuttings being of little or no value, as they only run away to flower and never break away freely. Insert three to four cuttings round the side of a thumb pot, water and plunge in a bottom heat of 75 to 80 degrees; keep close and shade from bright sunshine. In about three weeks' time they should be sufficiently rooted to allow a little air to be afforded them. This may be done by tilting the lights of the propagating box a little for a few days, after which they may be stood on a shelf near the roof-glass, and kept shaded. On no account should they be allowed the bright sunshine, as this is often the cause of sickly, stunted plants.

In a few days they should be ready for potting off singly into 60 pots; in doing so, choose good fibrous loam and leaf soil, equal parts, with enough silver sand and crock-dust to keep the whole porous. In potting, press the soil moderately firm with the thumb and finger, eschewing the rammer. From now onward the plants should be grown in a warm pit, having a temperature of 65 to 70 degrees. Admit air when the weather is favorable, closing them up about 3 p.m. with plenty of atmospheric moisture, still leaving the shading on until 5 p.m. They need but little water at the roots; about twice a week will suffice if the plants are kept lightly shaded as advised above. Keep all flowers picked off them until such times as they are wanted to bloom, which with me is about the first week in October.

Plants grown under this treatment should, by the month of October, have attained the height of 3 feet and 2 feet through them.—Charles Harding, in Gardening World.

Iberis Superba.

This perennial candytuft is a most valuable hardy subject. On rockery, in herbaceous borders, or the margin of shrubbery, it is equally at home. The iberises are of the easiest cultivation, thriving in any ordinary garden soil. Their growth is of a somewhat shrubby nature, and the foliage evergreen. Iberis superba, which is a variety of I. sempervirens, is one of the best, having flowers larger than those of the species. The accompanying photograph is of a view in the rock garden of the Royal Botanic Gardens, Edinburgh, Scotland—a garden that is famed for its collection of hardy plants—and shows a good clump of this choice hardy iberis. W. H. WAITE.

Lilies in Bermuda.

Editor Florists' Exchange:

During my annual visit to the Bermuda Islands this year I found the lilies in not as good condition as last year. There seems to be a yearly increase of a mixture of longiflorum and hybrid lilies, owing to the fact that some of the growers do not seem to know the difference between the L. Harrisii and the hybrid. The longiflorum and the hybrid produce more bulblets, which are healthy and more vigorous looking than the bulblets of the L. Harrisii, consequently more of the former are planted than of the L. Harrisii.

On the other hand, some of the growers are taking great pains to select and grow the good true Harrisii lilies, discarding all the mixture; but they are becoming discouraged on account of the growers of mixed stock receiving the same price as they do for their selected Harrisii bulbs; and some claim that it does not pay them to grow the true L. Harrisii and then dispose of it at the same price as the mixed stock brings.

Those growers who are making every effort to bring the Lilium Harrisii back to its old time form of years ago, should be encouraged more, so that they may continue their good work, and the growers of mixed stock should be fully informed of what the American florists want.

There has been a larger acreage of lilies planted this year than last year, and from my personal observation I find 50 per cent. are of a mixture.

New Jersey.

Some New Plants.

DRACAENA KEWENSIS.—This is an excellent house plant, hard and vigorous; and retains its foliage to the base for a long period. It is destined to become one of the finest market plants, being adapted to all kinds of decorative work, both in small or large plants.

SELAGINELLA WATSONIANA.—A very promising plant for the trade; most useful for all kinds of decorative work, small jardinieres and for edging of groups, etc. The foliage is deep green, with silvery white tips.

FICUS PANDURATA.—A striking plant, very vigorous constitution; foliage leathery and deep green. Its stately habit will make it most desirable for decorative conservatory use. A. DIMMOCK.

Field of Pansies for Seed.

The accompanying illustration shows a field of pansies Mme. Perret and Masterpiece, grown for seed by Peter Brown, Lancaster, Pa. Mr. Brown's new seed will be ready, he says, by the first of July.

Review of the Past Season's Palm and Decorative Plant Trade.

By WM. H. TAPLIN.

ie season for this department of the ness being practically at an end, is been suggested that some notes be experiences of the past season the possibilities of the future in class of plants would not be with- interest to the readers of The Flor- Exchange.

nearly all the prominent plant kets of our country there has been althy demand for decorative plants ng the past season, and stock of quality has been fairly well ied up, though without any mate- increase in prices.

occasional instance of slow de- d for palms has been noted, but it iite possible that some special and cause may have contributed to uce such an effect.

w York, Philadelphia, and Chicago g the centers of wealthy population advanced life, are naturally the test markets for fine plants, while on, Buffalo, Pittsburgh and sev- other cities each provide a great t for decorative plants; and as rade advances it is well to remem- that no single firm can control all trade, and that there is still room ie top.

rge specimen plants have been in demand, and there being no over- at the present time, it would to be impossible that there should surplus next Winter, especially in kentias. These last continue to he favorites of the decorator, not for their graceful habit, but also their enduring qualities, and al- gh there has been an immense ber of kentias distributed about the try in the past five years, yet there is to be room for good stock.

iny large plants are imported each on, but the costs of importation added to the original price makes such plants a questionable investment, even without considering the risk of injury in transit, and there seems to be no doubt but that the importations of decorative plants are not keeping pace with the enlargement of the trade.

And this condition is not to be wondered at when we take into consideration that the costs of importation on stock of this character range from 45 per cent. to 75 per cent. of the original price of the plants, a sufficient handicap to make a grower hesitate about ordering, even though he may be short of plants of a certain size.

Areca lutescens is still largely used for decorative purposes, for we have no other quick-growing palm that is so ornamental for such use, and at the present time the larger sizes, for example, those in 8-inch, 10-inch, and 12-inch pots, are not in great supply, though 6-inch arecas will probably appear in sufficient quantity for next Winter. Areca lutescens is seldom imported from Europe, owing to the fact that our climate suits this palm so much better that the European plants suffer by comparison.

Latania borbonica is possibly a little less in demand than a few years ago, but stocky and well-grown plants in 6-inch and 8-inch pots find many purchasers, and are really the ideal palm to a great many people. A large number of latanias was imported a few years since, but very many of them were extremely lanky and also had so many imperfect leaves that they could only be used for rough decorating, and thus proved but a poor investment in many cases.

The phœnix in general are rather slow sellers, even so graceful and beautiful a plant as P. rupicola failing to appeal to many plant buyers; but P. canariensis has been imported largely of late years and is really an admirable decorative subject. This phœnix does not always travel well from Europe, the Spring importations arriving in the best condition generally, but during the past season the market has not appeared to be able to absorb all the P. canariensis that were offered, and consequently the prices have ruled too low to be profitable. The extreme South and the Pacific Coast, especially that of Southern California, utilizes a considerable number of phœnix for outdoor planting, but, of course, growers are also able to raise the seedling plants there with very little effort and can, to some extent at least, supply their own needs in this particular

Small Cocos Weddeliania for table decoration have been used up quite closely the past Winter, and it does not seem probable that the market can be overloaded during the coming season, for there have been no bargains offered in cocos seeds this year, owing, in part at least, to the failure of the Brazilian crop—a crop upon which most of our growers depend.

Some years ago there were many Seaforthia elegans and Ptychosperma Alexandræ offered by the various growers; now there is but a very limited market for these palms; and the same may be said of Areca sapida and A. Bauerii, the kentias and Areca lutescens having crowded them out.

Livistona rotundifolia is slow in sale in large sizes, but up to 6-inch pots may be considered good stock to have, provided the plants in question are clean and in good condition.

Corypha australis and Chamærops humilis were also prominent in the days that are gone, but both these palms are rather slow in growth while in the small stages, and have been outstripped in popularity by Latania borbonica.

Aspidistras, both green and variegated, will always have a place among the salable stock, these plants being not only ornamental, but the toughest and most gas-proof subjects offered by the trade. The aspidistras are also imported in considerable numbers, simply because the home grower has been utilizing his space to better advantage in other ways, though the imported plants count up in cost quite rapidly and probably could be just as well grown here.

The "rubber trade," as the dealings in Ficus elastica are sometimes referred to, appears to have been stretched beyond the limit the past season, and while the vast stocks of this ficus seen last Autumn seem to have been distributed, yet many of them were sold at very low prices, and some of the larger growers are reducing their acreage, so to speak.

The quantities of Boston ferns that have been produced seem to melt away during the Winter months, and as Spring comes on there is rather a scramble to find some really good 6 or 8-inch stock, and it would therefore appear that the demand for this most serviceable fern is not yet fully supplied.

Dracænas are more used than they have been, Dracæna terminalis taking well at about Christmas time, while D. Sanderiana is still in demand for small work. D. Godseffiana does not appeal to the trade to any great extent, and has had no boom thus far. Good plants of Ardisia crenulata were in demand last Winter, and may safely be recommended by the florist to his customers, in evidence of which we may cite a plant that has been in a dwelling from December 23, 1902, up to the present date, with scarcely the loss of a berry; but to maintain this condition requires a good watering every day.

DRACÆNA KEWENSIS.

Pandanus Veitchii continues to be a good selling plant in most cities, and there is seldom an over-stock of it, but the plants must be shapely and well-colored to endure the scrutiny of the plant buyer in our large cities. Pandanus utilis, and, in fact, all the green-leaved pandanus, are somewhat slow in selling, there being a very limited demand for such as P. caricosus and P. graminifolius.

The two most notable introductions of the year among decorative plants are doubtless the "golden pandanus," P. Sanderi, and Pierson's sport from the Boston fern, both of which are novelties of undoubted merit. That either of these plants will entirely displace their predecessors in their respective families seems improbable; but that each has great merit and will find many purchasers is a foregone conclusion, and the respective introducers of these two novelties may both be safely complimented on the success of their ventures.

The AMERICAN CARNATION

HOW TO GROW IT

By C. W. WARD

READY

All Orders Filled on Day of Receipt

This magnificent volume contains 300 pages of the most valuable and instructive information on the subject of Carnation Culture ever presented. Every carnationist needs a copy; every grower should have a copy. Handsomely printed in clear large type on elegant wood-cut paper. The illustrations are from life and are of an unusually high order of excellence. Order at once, or send 2-cent stamp for sample pages giving synopsis of contents, index, list of illustrations, etc.

A. T. DE LAMARE PTG. & PUB. CO. LTD.
2 Duane Street—PUBLISHERS—NEW YORK

Review of the Market

EW YORK.—The weather this week been much cooler and far better adapt- o the cut flower business than was the one week ago. As might have been ected, the heat brought along the s so rapidly that now, when business be said to be picking up, supplies beginning to get shy. Particularly is the case with roses, consignments which have decreased to a remarkable nt. There has, of course, been a cor- onding advance in values, especially ng the shorter grades of roses. Of esmaid and Bride there is quite a lot he stock that is mildewed; this ma- al is hard to unload at any price, and quoted figures on roses have little ring on that kind of stock. While each is about the ruling figure for ial grade blooms, there are occasional which bring 8c. each, as also have e good blooms of Kaiserin Augusta toria.

merican Beauty are plentiful enough, the percentage of special flowers ng them is very small; consequently, t grade, when obtainable, is realizing 0 per dozen.

ut-of-town orders for flowers for Me- ial Day have been for carnations fly, and for the colored kinds in nearly ry instance. White varieties are con- uently not averaging so well in price, ugh, of course, all carnations are sell- better than they have done for the t week or two, providing they are of sonable quality. There are some car- ions coming in that seem to have had much sunshine for their own good, and s no effort for them to fall asleep nding up; that grade of stock cannot be l at 50c. a hundred.

eonies have now become a chief fac- in the market, and there is a pleas- increase in their value over that of veek ago.

ily of the valley is going as high as 0 a hundred for good stock; and this de is easier to sell than is a poorer lity when offered at half that price.

llies are not over abundant, and there been a slight advance in the values of m. Sweet peas are selling better, ugh a huge quantity is coming in, and cy prices are out of the question. hids are not in much demand; sup- s arriving include Cattleya Mossiæ l Lælia purpurata; $3.00 per dozen is asking price for the best of either d. Hemerocallis are plentiful, and ely offered at $1.00 per 100. Marguerites bringing the same figure. Centaureas rn flower), white or yellow, are quoted $2.00 per 100. Fancy mignonette is over h, though there is a supply of small kes.

erns, smilax and asparagus are plenti- and no advance in price is noted.

he plant market at Clinton street is ng well spoken of this season by the wers who attend there regularly. The t in which the market is held has ven a safe shelter and business gen- lly has been very satisfactory. Indi- ions seem favorable for a permanent rket building to be erected on the site the old market. John Birnie has spared ither time nor money in trying to get city authorities to take up the mat- ; and if the building does go up it will ve been accomplished mainly through efforts.

HILADELPHIA.—The cut flower busi- ss shows a very encouraging change m that of the past few weeks; the ount of business being done is much ger, and prices are slightly better. ere appears to be a scarcity of choice ite roses. All other stock is in suf- ient supply. American Beauty roses, th long stems are being offered at m $2.00 to $3.00 per dozen, a few extra oice for shipping being held at $4.00. oice tea roses are held at from $8.00 to .00 per 100. The kind of stock mostly ught after is going at from $4.00 to $5.00 r 100. There is an oversupply of poor ck of all varieties of tea roses.

Peonies are selling at from $4.00 to $6.00 r 100 for general stock; a few extra oice varieties are held at $8.00 per 100. ile many buyers resent this latter price. e small quantity of extra choice flowers ered supports the firmer rate asked.

Sweet peas are not in quite as large pply this week prices ranging princi- lly at 50c. to 75c. per 100, some choice wers being held at $1.00.

Lily of the valley is in good demand, and selling at from $3.00 to $5.00, accord- g to quality.

Gladiolus are in good supply, going at .50 per dozen.

C. W. Cox is sending a quantity of ntaurea imperialis to S. S. Pennock; it lls well at $4.00 to $5.00 per 100. There s been a good demand for asparagus d smilax this week.

Wm. J. Baker is receiving the best ilax now seen here; it is not only good r this season but would have sold at n price in Winter. Geo. F. Christy is nding to this same firm some grand overnor Roosevelt carnations.

Edw. Reid is doing a large shipping siness in carnations; Wednesday at on he had orders to ship 30,000 the fol- wing day. DAVID RUST.

CHICAGO.—The condition of the market the past week has been anything but satisfactory. The price of everything has been very low; still values have not ruled as low as in former years at this season. There have been heavy supplies of all kinds of stock on the market, and the poorer grades have been sold at a sacrifice. American Beauty have moved fairly well, but at very low prices for the better grades, while the poorer ones have been sold at any figure to clear out. Bride, Bridesmaid, Golden Gate and Perle des Jardins have reached as high as $6.00 per 100 for the better grades, while inferior stock has been sold at what the buyers were willing to pay for it, the bulk going at $3.00 per 100 down. Tea roses are badly infested with thrips, and a great deal of sorting has to be done in order to sell the stock at anything like satisfactory prices. The supply seems to be shortening up considerably, and toward the last of the week prices will no doubt be higher for Decoration Day, although they will not exceed $6.00 to $8.00 per 100 for good stock. Liberty brings from $6.00 to $20.00 per 100.

Carnations have been in oversupply for the past week, and values, except for the fancier varieties, have not been what they should. Good shipping stock has held up fairly well and has brought from $2.00 to $3.00 per 100, but the majority has been selling for from $1.00 to $1.50. Some very low figures are reported by the thousand lots.

Sweet peas are in heavier supply than a week ago, with the quality better, but they do not seem to move as well as in former years. The price is from 50c. to $1.50 per 100.

Peonies are arriving in increasing numbers and selling at a fair price for the lighter shades; but there is not much call for the red varieties. The bulk are going at from 50c. to $1.00 per dozen. There is a large supply of shrubs and herbaceous stock on the market at present; these are bought up quite freely.

Smilax is coming in in larger quantities and is selling at from $1.50 to $2.00 per dozen.

Some single violets are to be seen, and some very fine lilies. The supply of the latter for Decoration Day promises to be fairly good. They are selling at from $6.00 to $8.00 per 100. Hardy ferns are very scarce and are fetching from $3.00 to $4.00 per 1000. The native wood fern is beginning to arrive and will have a tendency to relieve the situation. R. J.

ST. LOUIS.—Business is still very dull in every line but funeral work. Memorial Day, Saturday, should relieve the market of its great surplus of outdoor flowers. The first two weeks in June, when school graduations are in full blast, the trade should be good, and especially so with the West Enders, in which district all the large seminaries are located.

The market has still an oversupply of stock, which is of fair quality. The best call is for white flowers. Fancy stock, in small roses, has advanced a little and $8.00 per hundred is asked for them. Bride and Bridesmaid are among the best. Red roses, as a rule, come in full blown, and then are not salable. Kaiserin Augusta Victoria are coming in in fine shape and sell well. American Beauty are beginning to show the effects of the hot weather, and are soft; $2.50 and $3.00 per dozen is the price for the choice ones. Bride and Bridesmaid bring from $3.00 to $8.00 per 100; Golden Gate, the same figure. Souvenir du President Carnot are much sought, as are Kaiserin Augusta Victoria; these are selling for from $4.00 to $6.00 per 100.

Perle des Jardins are very soft and are now at $2.00 and $3.00 per 100. Plenty of these will be in the market to fill orders on Decoration Day.

Carnations are in pretty good supply and at times sell fairly well. The colored sorts are moving slowly. Flora Hill and Ethel Crocker, which are good keepers, have the call. The Marquis is fine for immediate use, but is not regarded as a good keeper. Other varieties are becoming small but are good in color. No price can be quoted on them in thousand lots; from $1.00 to $2.00 is asked for the best stock in hundred lots.

Peonies are coming in fine, but will soon be over; $4.00 is the price for the best. Cape jasmines are abundant at $1.00 per 100. Sweet peas are having a big call and not many are going to waste; the few that do are of odd colors, which do not sell. Katherine Tracy is the best seller; 40c. to 60c. is the price for the best. In thousand lots they can be bought a great deal cheaper, at a rate of 25c. per 100. The large supply of outdoor stock is shortening up, but there will be plenty for Decoration Day. Dagger ferns are abundant now; fancy ones scarce; new stock is promised soon. ST. P.

CINCINNATI, O.—Warm, sultry, with thunderstorms, are the weather conditions prevailing here. The past week has witnessed the worst glut ever experienced in this city. Stock arrived in bad condition, wide open, and in many cases heated, and worst of all, business was stagnated. There is no use talking about prices. This coming week we shall try and make some amends for the loss sustained last one. Cheap flowers are what the people want for Memorial Day, and from present appearances the stock will be cheap enough, in all lines, as this intense heat is playing havoc with it.
E. G. G.

BUFFALO.—Some spurts that came in during a general dullness has helped to work off a surplus of blooms, and most kinds are less plentiful. Indoor stock is rapidly taking on the poorer Summer quality. Carnations will no doubt be in active demand at Decoration Day, and for which, owing to many outdoor blooms usually relied on at this time, being done, a general shortage is presaged. Roses, too, are slackening up in quantity. Some nice sweet peas seem quite plentiful.
VIDI.

SAN FRANCISCO.—With few exceptions, florists characterize the market this week as slumpy; that buyers are not yet recovered from their floral surfeit incidental to extravagant indulgences last week in honor of President Roosevelt's visit; that many people have gone summering, and that, with the exception of roses, flowers are so superabundantly plentiful that price-cutting is making a shocking record. ALVIN.

ST. PAUL.—Spring, so long delayed, came on with a rush about ten days since, and now we are almost in Mid-summer. All vegetation has made wonderful growth and everybody in the trade has been exceedingly busy. It is needless to say that trade has been very good in all lines. The warm weather has forced everything into bloom at breakneck speed, consequently there is a large percentage of inferior stock being cut. Good flowers sell at good prices, but "roses, 50c. per dozen," is not an infrequent sign, while on Saturday last a prominent department store sold "roses at 20c. per dozen, carnations 10c.," and a grocery store, not to be outdone, actually gave them away. But these are incidents similar to those in every city's history, and we need not fear for the future. Good roses retail at $1.50 per dozen; American Beauty, $4.00 to $6.00; carnations, 75c. to $1.00; lily of the valley, 75c. Swanson had some very nice tulips the past week with 18-inch stems which retailed readily at $1.50 per dozen. Outside stock is coming along rapidly, so there should be a good supply for Memorial Day. Lilacs are nearly gone. The "four hundred" have been using them for center pieces at luncheons this Spring. Snowballs will be in bloom in a few days, but peonies will not be in before June 5.
VERITAS.

DENVER—Trade has been very steady for May. Stock is in very good supply, and the quality is good. Sweet peas are much in favor, and are used very much in table work, of which there has been plenty doing, though not anything large. The most notable event of the month was the reception at the Phipps residence, at which the decorations were quite lavish. Owing to the continued cold weather plantsmen report sales slow, and it will have to warm up considerably for a clean-up around Memorial Day. The supply of cut flowers for this holiday, while impaired to a certain extent by the absence of outdoor stock, will be good. Carnations, which are most in demand, will be more plentiful than in former years; roses also are to be had in good lots.
P. S.

PROVIDENCE.—Business in cut flowers has assumed a quietness, the more distressing on account of stock accumulation. It is a subject of congratulation, however, that notwithstanding the surplus there are only one or two street fakirs in evidence. This shows that the growers are not selling recklessly, and gives a better tone to the market.

The outlook for Memorial Day denotes a goodly quantity of carnations and roses, although the surplus cut will perhaps be past by that time.

All greens are in active demand, and it requires hustling to obtain a supply.

More florists will make an effort to obtain 75c. for the small bouquets at Decoration Day. C. S. M.

FIRMS WHO ARE BUILDING.

CANTON, MASS.—Benjamin F. McKechnie is erecting another greenhouse.

RANTOUL, ILL.—The Morris greenhouses are enlarging their plant by the addition of another house. Just now the firm is installing a system of steam water-works and piping water to all parts of their grounds.

ANAMOSA, IA.—Mrs. Charles Abbey has erected a greenhouse and engaged in the florists' business.

ANN ARBOR, MICH.—James Goodhew is building a greenhouse, 120x22 feet, for roses.

Chicago.

News Jottings.

The outlook for Decoration Day promises to be better than was anticipated. There is no doubt but that there will be a shortage of good flowers in the market, in rose and carnation lines, while the supplies of other stock will have a tendency to bring better prices. Some extra fine antirrhinum will be in; it is now selling for 50c. per dozen sprays.

The weather for the past few weeks has been rather dry and warm, but relief has been had in some fine rains. Until these came it was almost impossible to do any planting out, and what had been done was beginning to suffer for lack of moisture.

Monday, May 25, the city was visited by a heavy wind and rain storm. Some destruction is reported in the parks and drives.

The trade in bedding plant lines promises to be the heaviest ever experienced here, and already shortages are reported, especially in stock for vases and basket work. Vincas of the better grade are very scarce, and it is impossible to get salvias at any price.

The trustees of the Florists' Club, at the special meeting held May 18, reported that they would be compelled to find other rooms elsewhere. This will have a tendency to still further decrease the attendance, which is small enough as it is. The enthusiasm which used to prevail in the club is now lacking, for some cause or other.

The retail trade is reported as fairly good, notwithstanding the overstocked wholesale market.

The E. F. Winterson Co. filled one order last week for 500 strings of smilax.

A. L. Randall has got his new quarters fitted up in fine shape. He has installed a new icebox, and has a fine office with all the latest improvements.

G. L. Grant, editor and manager of the Florists' Review, has gone, with his family, on an extended vacation. During his absence the paper will be in charge of Mr. Howard.

ROBERT JOHNSTONE.

St. Louis.

News Notes.

The Beyer Bros. made an elaborate decoration on Monday at the German-American Bank, which celebrated its fiftieth year in business. A large quantity of plants and cut flowers were used.

J. W. Dunford, J. F. Ammann and F. J. Windt, who have been on the sick list for some time, are again around and attending to business.

The Benzen Floral Co. is sporting a new delivery wagon, and reports a good trade in plants.

Gus Eggling is laid up with a bad case of his old complaint, rheumatism. Gus is one of the five florists who are out for superintendent of public parks under Commissioner Aull.

The Ellison Floral Co. has been very busy of late with table work, and reports a good trade since moving into its new place on Olive street, near Grand.

Bowling.

There will be a general meeting of the florist bowlers on next Monday night, June 1, at 8 o'clock, at the Monarch bowling alleys, 2012 Locust street. This meeting is for the purpose of reviving bowling among the florists. The older members who have not been seen at the alleys for some time are requested to be present and see if we cannot make up a team to compete for the prizes at Milwaukee this Summer. The S. A. F. meeting will be held in August and the time till then is short. ST. P.

Exhibition.

TARRYTOWN, N. Y.—An exhibition of roses and strawberries will be held in the Young Men's Lyceum, Thursday afternoon and evening, June 11. Some useful articles are offered as prizes. Thomas A. Lee, Ardsley-on-Hudson, N. Y., is manager of the exhibition.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.

WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5-pound package for nothing if you will pay the express charges on it. Write Dept. B THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

Mention the Florists' Exchange when writing.

Baltimore.

Your correspondent has neglected this city for some time, but this was owing to the fact that business was brisk with us all, so that there was little time to collect news.

We are in the midst of Spring work and trade. There is a scarcity of geraniums and bedding plants in general this year. The demand is good. The long continued dry spell has made things uncomfortable for the plantsmen, as everything is being centered on a few days.

The Florists' Exchange has made a change in its management. Alex. Scott, who for many years has been manager of the local commission house, has given up the position on account of ill-health and J. J. Perry has been appointed his successor. Mr. Perry will give up his retail store and take full charge of the work.

The club had a strawberry night. A lecture by Professor Austin on strawberries and their culture was followed by a feast of the fruit with cream, so that the boys could have a practical demonstration of the value of the luscious berry. President Richard Vincent, Jr., was host.

A. Lootze, of Glenburnie, has had large shipments of chrysanthemum novelties. His enthusiasm for the Queen of the Autumn is as great as ever. He has quite a large stock of seedlings, which look promising.

Philip Welsh, of Waverly, does not intend to occupy his new farm at once, but will endeavor to have the land in the best of condition by the time he is ready to build.

Mr. Holden, for many years gardener to estate of Robert Garrett, Esq., has gone into business on his own account.

There has been a great demand this season for Baltimore chrysanthemum novelties—varieties such as Willowbrook, Robert Halliday, Lady Harriett, Harry Parr, Adele, John K. Shaw, all of which have proven standard sorts.

The agitation for a flower market, under the auspices of the city government, has quieted down. It should be pushed to a conclusion.

EDWIN A. SEIDEWITZ.

Philadelphia.

The Week's News.

The retail stores have all been doing a nice business this week. While all flowers are plentiful, they have moved a quantity of good stock. The horse show is in progress at Wissahickon Heights; this event has brought a great many visitors to the city, and a lot of dinners, etc., have been given.

The entire city has been in gala attire all week on account of the Knights Templar conclave. The effect on the florist business has been principally in plant decorations at the various halls. A large quantity of foliage plants have been used.

Miss Ellen Drexel-Paul, daughter of Mr. James W. Paul, Jr., president of the Pennsylvania Horticultural Society, was married on Saturday last to Mr. Paul D. Mills. The wedding took place at Radnor, in St. Martin's Church, the reception and wedding breakfast being held at Woodcrest, Mr. Paul's handsome country place. The wedding breakfast was in reality an immense garden party, the 400 guests being seated at small tables, arranged on the lawn under trees, etc., while the bridal party were seated on the terrace around the mansion in full view of all. Hugh Graham did the decorating and arranging of all details in plants and flowers.

The dry weather still holds here, and while planting now has to be done it entails a lot of work. In many cases beds have had to be soaked before planting, and the plants have to be continually watered afterward. All outdoor flowering plants are suffering, the blooms not developing properly and not holding well after being cut.

Next Tuesday evening will be Florists' Club night, when wrought iron pipe and air valves will be the subject of an address by Walter H. Whetstone. The June outing to Samuel C. Moon's nursery will also be taken up at this meeting.

A special meeting for outdoor roses will be held next Tuesday evening by the Pennsylvania Horticultural Society.

DAVID RUST.

St. Paul.

A Valuable Shrub.

A recent inquiry from the South for lilac blooms the latter part of June recalls to mind that most beautiful variety, Syringa japonica grandiflora, more commonly known as the Japanese tree lilac. In this latitude it blooms late in June, bearing immense clusters of small, double, fragrant white flowers, valuable alike as an ornament on the lawn and for use as cut flowers by the florist. I never see it mentioned by our florist writers, but it certainly is a most valuable addition to our list of hardy flowering shrubs, and should be planted by every florist who has the room to devote to it.

News Jottings.

Copious rains have brought carnations in the field along in good shape, and stock is looking fairly well.

Of course, every one is rushed now with bedding stock, and as usual, every customer wants his work done first. Beds, boxes, vases and baskets are being filled as rapidly as possible, for all must be in position by Memorial Day. Owing to the late Easter, stock is lankier than usual, but that makes little difference to the ordinary buyer who wants bloom above everything else, desiring plants for immediate effect when planting.

L. L. May & Co., have a fine lot of longiflorum lilies which are firm blooms, in fine condition for Memorial Day. Gardenias have put in an appearance; nothing can surpass these for geeral use, and they are a very welcome addition at this time.

Shipping trade is ahead of previous years, and from present indications there will be a general clean up of all stocks this Spring.

Quite a number in the trade are looking forward to a trip to the Milwaukee convention. The bowlers are working hard, but are not publishing scores. The dark horse often wins, and it will be well to look out for them at convention time.

VERITAS.

San Francisco.

Decorations at President Roosevelt's Reception.

All seasonable blooms are here in greater abundance than ever before, and rhetorical bouquets innumerable have this week been cast at various masses of our people by the strenuous President of the United States, who was in this coast metropolis May 12 to 14, inclusive, and who has just departed for a much needed four days' rest midst uncultured flowers and Nature's wild and craggy giant scenery in Yosemite Valley.

It goes without saying that the visit of the copiously welcomed chief executive created a busy business week for more than a few local floral artists.

For the accomplishment of a couple of the center events of this memorable May welcome feature incidental to President Roosevelt's visit, which moved him to loftiest expression of delight at California's floricultural possibility, the retiring and unmentioned handiwork artists in the background were, respectively, the Misses Worn, 18 Post street, and Miss Charlotte Williams and Miss Louise Daly, decorators for the trade.

In line with the wish of the president of the Citizens' Presidential Reception Committee, General M. H. de Young, proprietor of the Chronicle, that all the city's florists be patronized to the extent of their supply ability, respectively, the lady decorators ransacked the stores for the choice abundance of blooms, ferns and greenery, which they wrought into creations that delighted the nation's chief and his distinguished fellow travelers, the first and third nights of their visit, in the two large assembly halls in the Palace Hotel.

Since the Chronicle has put it in this way—"nothing better has been seen in this city and probably nothing quite so good"—it is perhaps all right to say that the aforesaid work of the lady floral artists named may go into local history as the eclipse decorations of all San Francisco's many past praiseworthy effects in this line.

Of the blooms utilized in these superb decorations, not omitting the State's golden flower—the poppy—the carnation family was largely in evidence in the Mrs. Theodore Roosevelt, Golden Beauty and Governor Roosevelt; and besides orchids in magnificent variety, roses were plentifully apparent in the American Beauty, Bride, Bridesmaid, Golden Gate and White, Yellow and Crimson Rambler. On the display tables the Old Glory color scheme of the lady decorators was beautifully sustained. There were red poppies, blue cornflowers and white sweet peas, all simple, homely flowers, and yet combined to remind every American of the colors which make up his flag. These tri-color bouquets were disposed at intervals along every table, and between them stood fantastic floral creations, such as the famous battleship Oregon, fortresses, San Juan hill, with a blockhouse at its top, and Filipino huts.

The tables were covered, not with snowy linen, but with most delicate golden Indian silk and heavy woven cloth of gold fringed with metal gold. More than half a thousand yards of silk were used in covering the tables, along which stretched a low, careless hedge of golden iris, like a magnificent vine thick with long-stemmed, big, pale yellow blossoms. Then, twining through and edging the beautiful flowers of gold, were streamers of dainty white hawthorn branches. Spread both ways to the limits of the range of tables, the floral ornamentation was blended gradually out through yellow to white iris and white hawthorn to pale pink and then to rich pink carnations flung and strewn artistically around every table.

On the walls, at each side of draped flags, was an enormous rambling mass of thick-flowering hawthorn of the color of luscious crushed strawberries among green leaves growing up from large gilded wickerwork baskets flat against the wall. There was a cartload of the lovely flowering branches in either of the bountiful clusters.

Overhead, spreading out like a sunburst, held fast to the center of the ceiling, was a gilded urn-shaped basket, from which there radiated to all points of the compass long, straight stems of bamboo with delicate feathery green branches. From this basket there hung like steadying guys graceful ropes of evergreen, extending to the four corners of the room. Red, white and blue electric lights dotted these leafy strands.

Over the large electroliers on the walls of the room were hung bunches of St. Joseph lilies, supported by green of rushes and yew and live oak, and in every niche and embrasure and under every arch there were luxuriant bouquets of choice blossoms, rose designs, and baskets of iris, lily of the valley and ferns.

News Notes.

The Pacific Coast Horticultural Society has been discussing the Japanese question in its relation to the floriculture and horticulture of this district.

A new organization, named the California State Horticultural Alliance, has materialized, with H. H. Lilienthal as president. It has about twenty of a membership, Japanese being admitted. Recently President Roosevelt was voted an honorary member.

It is current talk here that Capitalist Meyers has bought several acres at Burlingame for the propagation of roses.

The beautiful new store of Sievers & Boland, at 33 Post street, was formally opened the past week. ALVIN.

Buffalo.

News Notes.

At Palmer & Son's uptown branch, on Saturday last, for a funeral order, a casket cover of lily of the valley was elaborately finished through the employment of five thousand sprays. Also a casket cross of lavender sweet peas and three wreaths, each measuring thirty inches in diameter, composed respectively of white sweet peas, white roses and American Beauty.

For a masonic order for a funeral, on Wednesday, Byrne & Slattery turned out a large standing wreath, an example of fine work.

Cape jessamine blooms are in from the South, but have, generally, come poor.

Everything now points to an active local call for bedding plants. The filling of vases at Forest Lawn Cemetery alone is estimated to run into some thousands in number. D. Newland & Son, Wm. Legg and Wm. Scott, all being located close by, handle the largest number. A glance at Newland's showed that the various orders become simplified to a few standard classes. Geraniums are noticeably the basis in the plants employed, the scarlet sorts being used largely. With some this plant alone suffices. Others include a border of vincas while some mixtures are also called for.

Scott's greenhouses show some held over astilbes and Lilium Harrisii in nice bloom. An imposing array of bay trees and box in tubs enhance the business look of his wide corner front.

Alex. Scott, of the Cut Flower Exchange, Baltimore, is visiting his brother, Wm. Scott. Other recent callers included C. J. Pult, North Tonawanda, N. Y.; H. J. Wise, East Aurora, and C. T. Guenther, Hamburg, N. Y.

Though very modest in extent, several showers the forepart of this week seemed to forerun a change from the undue drouth, and better ones followed on Tuesday night. VIDI.

Cincinnati.

News Jottings.

The matrimonial fever seems to be contagious in the Witterstætter neighborhood. Frank Deller, nephew of Richard W., will be married on June 10 to Miss Julia Neiderer. Mr. Deller is in the employ of his uncle. We shall now look for a still better quality of carnations from this time on.

Martin Reukauf, of Philadelphia, and Fred Walz, of Wilmington, O., were callers during the week.

The florists who are growing plants are reaping a harvest; their stocks are selling rapidly and at fair prices.

(REGISTERED)

GREENHOUSE FUMIGATING POWDER

is the newest and best article on the market today for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:

1 lb. Tin Can ...	$0.25	25 lb. Sealed Box	$4.50
5 " " ...	1.00	100 " " "	16.50

New Haven, Conn.

The New Haven Horticultural Society held its regular monthly meeting, Tuesday evening, May 19. There was a large attendance and considerable business was transacted. A committee consisting of William Gardner, A. J. Thompson and J. W. Woodward, was appointed to arrange for the annual outing. The report of the committee in charge of the Fall exhibition was heard, as was also the report of the committee appointed to secure a charter from the legislature for the society.

Cromwell, Conn.

Mr. and Mrs. A. N. Pierson, who left on May 2 for a Western trip, are now in California. They are expected home about the middle of June.

Memorial Day orders will run somewhat ahead of last year's. While the extreme hot weather of the early Spring has forced outdoor flowers of all kinds, it has not seemed to interfere with the demand for those grown under glass.
H.

Melrose, Mass.

The suit brought some time ago by Edwin Ormsby of Melrose against M. D. Vaughn of the same place, for alleged infringement of patent No. 11,639 on transom lifters for greenhouses, has been decided by Judge Hale, in the Federal Equity Court in favor of defendant, the suit being dismissed.

North Adams, Mass.

The palm swindler visited this town last week. Florist Schmutz was his victim. The amount is $15.00. The same old game was practiced; and still all of us have not yet learned to combat it.

An expert rose grower grows good roses.

He has made a close study of roses and is a specialist.

His whole thought and attention are devoted to roses.

Our whole thought and **attention** have been given to greenhouse building material. We have had **years** of experience in supplying material to critical, practical growers.

We are specialists in Greenhouse Construction, just as the rose grower is a specialist in roses.

We can serve you much better than one lacking this experience.

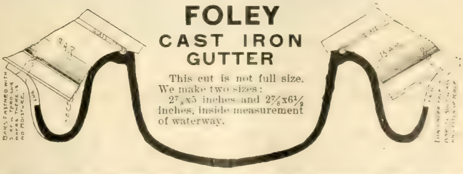
FOLEY
CAST IRON
GUTTER



This cut is not full size.
We make two sizes:
2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

ST. PAUL.—J. B. Kidd, salesman for the Cox Seed Co. of San Francisco, was a recent visitor on his way to the annual convention of the American Seed Trade Association at Atlantic City.

Another Bermuda Lily Combine.

Yesterday afternoon the lily growers of the colony met in the Bermuda gymnasium to take into consideration the expediency of forming an association for the purpose of protecting the lily industry of the colony by ensuring the exportation of good stock and the securing of fair prices for the bulbs. About 35 of the principal lily growers met. C. Peniston was chosen chairman, and on taking the chair proceeded to explain the objects for which the meeting had been called. Some discussion followed, from which it was clear that those present were not unanimous with regard to the proposal; two or three of the smaller growers were apparently averse to the formation of an association and declined at present to join any such organization; the large majority, however, was favorable to the proposal and a resolution was passed affirming the necessity for organized and united effort. A committee was appointed to draft rules and regulations for the working of an Association.—Bermuda Colonist, May 23.

ST. JOSEPH, MO.—The Missouri Valley Seed Company writes: "All the planting in our section is very much behind. We have had an exceptional lot of rain during the last Spring months and it does not seem to be at an end yet. However, if it clears off now, we shall yet have time to make good crops, as we are in a quick maturing section."

European Notes.

Excellent results are following a spell of bright, hot weather, both as to trade and cultures. Orders for garden seeds still arrive at this late season, many people having been unable to get on the ground on account of the late rains. Trade in agricultural seeds and clovers has brightened and is strengthening every day.

All crops show a most decided progress, plants being unusually vigorous and healthy, promising good returns. Of course, in many articles, as beets, cabbages, etc., a rather large acreage has been lost entirely, but all remaining in the fields are progressing splendidly.

Lettuces, endives, etc., are making a slightly better show, and may yet catch up and yield a fair crop.

Regarding swedes, etc., which are now so full of life, a warning of possible reduction in their yielding is presented to us in the shape of "beetle," which has begun to make its appearance with the warmer weather.

EUROPEAN NOTES.

Condition of Seed Crop Plants

LA CROSSE, WIS.—John A. Saizer Seed Co. write: On our seed farms in Dakota the crops never looked better. We have had sufficient rain and good growing weather, but in western Wisconsin things are suffering on account of excessive rains.

MINNEAPOLIS, MINN.—Northrup, King & Co. say: Spring planting in the northwest was late owing to the cold and backward season. The growing conditions have been favorable except now we appear to be getting too much rain. In some districts the land is under water, and this is especially affecting the corn.

CLINTON, WIS.—L. L. Olds writes: The acreage of seed potatoes is quite large, and thus far the conditions are very favorable, although most of the potatoes are not yet up. Small grain perhaps never looked better at this time of year, and the prospect for the corn crop is all right, so far. Just now (May 27) there is too much rain, however, the ground being thoroughly saturated with water.

DES MOINES, IA. The Iowa Seed Company states that the season here has been extremely wet. "We are having rains almost every day, so that it has been difficult to get on the ground to plant. Our main crops here are seed corn, cucumber, squash and tomato. The tomatoes are looking nice, but some of our growers have not yet succeeded in getting other crops planted."

ST. LOUIS.—As yet it is almost too early to make anything like an accurate report relative to the condition of the growing grass seed crop in the section tributary to our market. From what we can learn, however, clover looks excellent, timothy only fairly well; and while red top is looking well, we do not anticipate as good a crop as that last season.

D. I. BUSHNELL & CO.

SOUTH HAVEN, MICH.—The Haven Seed Company writes: "The fore part of the season, until May 21,, was very dry. The lack of rain has made the radish crop rather late. However, the recent rains have put the ground in good condition for putting the tomato crop in the field, and have also greatly benefited the radish crop, so that we hope to get a full yield."

NEW YORK.—J. M. Thorburn & Co. report: "On Long Island and in Connecticut seed crops are suffering for want of rain and if the drought continues much longer we fear that some crops will be entirely lost. We are not dependent, however, upon any particular locality for our seed crops generally, but have them grown in all parts of the world, wherever experience has proved the respective kinds to be produced in best quality."

LAWRENCE, KAN.—F. Barteldes & Co. write: "Sweet corn and field corn were late getting into the ground. However, we have fair stands now and all promise well so far. Our vine crops, such as watermelon, muskmelon, squashes and pumpkins, are just being planted. Our onion seed for raising sets was sown a month ago; it came up nicely and we have an excellent stand. The prospect for grass seed, such as timothy, meadow fescue, and others, is promising well.

VALLEY STREAM, L. I.—The drouth on Long Island, which has now run beyond five weeks here, is doing harm to peas and delaying the setting out of tomato, cabbage and other plants in their appropriate fields. The chief injury is to peas, the vines of those above ground having turned yellow through the lack of moisture, while those planted later have not germinated and will not until a good, soaking rain falls. The last mentioned condition applies to corn as well as to peas, and it is probable that much corn ground will have to be replanted. Colorado beetles have appeared here in large numbers, and are attacking the young potato vines.

GREENE, N. Y.—The Page Seed Company write: "We are suffering now from the worst drouth that this section has known for a great many years. No rain has fallen for a period of about six weeks; the crops are backward, and a great many are not yet planted. Those that were planted early are up, but stand still for lack of moisture. Seeds that have been planted for the last three weeks lie dormant in the ground, on account of the extreme dryness of the soil. Unless the weather changes very quickly and we have rain, we should predict that the crops grown in New York and Pennsylvania will be very short."

CAMBRIDGE, N. Y.—The Jerome B. Rice Seed Company say: Here in Washington county, New York, we have not been blessed with any rain this Spring, and our ground is very dry. Farming and gardening operations are almost at a standstill. Many fields cannot be plowed for corn or potatoes, the ground is so dry. Much seed that has been placed in the ground will not grow, there not being enough moisture for germination. Under these conditions seed crops are not prospering. Turnip seed crop will be a very light one, indeed, hardly worth the harvesting. The root crops that were set for seed purposes are in the same condition. Of course, it is yet early for a report on other seed crops, but certainly the outlook is not at all encouraging.

RAVENNA, OHIO.—Plants at this season are looking as well as usual. It is too early to tell what crops will be.

FORD SEED CO.

LINCOLN, NEB.—The Griswold Seed Company makes the following report on the outlook of seed crops: "Seed sweet corn, two-thirds of the crop is in, but the weather is most unfavorable; low lands are badly flooded and will have to be replanted. Crops on higher lands are growing very slowly. Prospects for replanting are very unfavorable at present, as we are having rains almost daily. Vine seeds—very little of this crop is in as yet, and the weather is unfavorable for plants on account of the excessive rains. Reports from over the State indicate that Fall wheat is better than last year. About two-thirds of the corn is planted, but all on low land is under water and will have to be replanted or the land sown to something else, and it is really too late now to replant. Oats and all other small grains are growing very slowly on account of lack of sunshine."

WATERLOO, NEB.—The Western Seed and Irrigation Company write as follows: "Frequent heavy rainstorms experienced during the past two weeks have prevented continuous planting of field and sweet seed corn crops in this section, in fact, throughout the States of Nebraska, Iowa, and Kansas. Many crops that were planted early in the month have now to be replanted. There are some isolated instances where corn that was planted early has withstood the inclement weather, but as a general proposition, the entire corn crop of the States above referred to has been greatly retarded thus far this season on account of the reasons given. Many farmers have already given up the idea of planting corn on their low lands, and are looking for millet, cane, etc., to substitute for forage crops; consequently, the market price of this kind of seed has advanced and is daily continuing to advance materially in value. Very few vine seed crops have been planted in this immediate locality, but there is yet sufficient time up to June 10 to 15, in ordinary seasons, in which to plant or replant the same, and it does not seem possible that the excessive rainfall we have been experiencing will continue so as to prevent the planting of seed and the obtaining of favorable crops."

LOUISVILLE, KY.—Wood, Stubbs & Co. report as follows: The general conditions for gardening and farming in this locality this season have not been very favorable. Early in the season we had too much rain and too much cool weather, which, of course, delayed the planting; consequently, when the crops were put in it was very late. For the last three or four weeks we have hardly had any rain, and everything is suffering now from drouth. The acreage of onion sets this year, from all reports, does not appear to be more than three-fourths of last year's, and at the present time looks as if it would not make more than one-third to one-half crop. Onion seed crops are not doing very well, and the prospect for this is not over 50 per cent. Dwarf curled Siberian kale promises a good crop. Our contract stock of this is later blooming than the ordinary strain, but from present indications will make a good yield.

The prospects for orchard grass are only fair. It is heading out now, and stocks are very much shorter than usual, and the indications are for very much shorter crops. Winter turf oats are looking fairly well. There are immense quantities of these grown in this section now, and the acreage this year is larger than usual.

Comparatively little tobacco is set out over the State as yet, owing to the very dry season. A good general rain would improve conditions a great deal; but if it remains dry for ten days or two weeks longer, many crops will be very short.

The Seed Crop in Eastern Massachusetts.

This is a hard seed year for eastern Massachusetts. The seed onions did not winter well and when the crop was put out in some instances the land was too wet to admit of sufficient working to get a firm seed bed. On the other hand, for the past fortnight the crop has suffered greatly from the drouth that has prevailed, the most remarkable for the season of the year that I can recall in more than forty years' experience as a seed grower.

The seed cabbage suffered greatly from the freeze of mid-Dcember, when the thermometer marked 16 degrees below zero—the lowest December temperature for eastern Massachusetts I have ever known. This caught me with my 50,000 seed heads earth covered only, the leaves and meadow hay not having been added. The result is now showing itself in the seed shoots wilting and falling over—a sure sign that the stumps have rotted from the effects of the freezing.

The extremely dry weather is also showing its effects. How far the two combined will reduce the cabbage seed crop it is impossible at this early stage to prognosticate, but that the injury will be a very serious one is thus far evident. The onion and carrot seed crops are also being seriously affected by the great drouth.

J. J. H. GREGORY.

Marblehead, Mass.

PHILADELPHIA.—D. Landreth & Sons send us the following extracts from their prospectus to travelers on crop conditions.

"Never before, in the hands of merchants, were seed stocks of peas, beans, sugar corn, cucumber, squash, melon, pumpkin, tomato, carrot, and some other families of seeds of past crop so reduced in volume as at present, consequently, never before was there so much depending upon the next crop of seed, and the prospective yield is of unusual interest to all seedsmen who take orders before the crop is made.

"It will be observed we only estimate one family of seeds as up to 100 per cent., these being beans, and while they may be up to 100 per cent., they certainly will not be produced in excess of that, because of late planting. The excessive drouth in the East making the ground so hard it could not be ploughed, and excessive floods in the West making it so soft the crop could not be put in, both of which conditions will certainly result in a late crop, and growth being extended up to the frost line, when there is danger of serious injury, if not total loss. The crop of bush beans altogether depends upon a late growing Autumn. The prospective crop of other seeds has already been reduced by the conditions of the past; little improvement can be looked for in them, but quite the contrary.

"This 4th June report, the first of this year's series, is a report so early as to be necessarily vague in its percentages, but it is made out to the best of our knowledge, and is one thousand times better than none at all.

"The column of per cent. reports is as to the total quantity which we now expect to be harvested by growers, in comparison with the quantity necessary to meet the normal wants of the seed purchasing public.

"Bush beans, few yet planted; all will be later than usual, if not caught by frost; production may be normal, that is to say, 100 per cent.

"Peas, Alaska, extra early, and dwarfs, in New York and Canada, already seriously injured by drouth; productions estimated at 65 per cent.

"Peas in New York and Canada, medium and late sorts, 80 per cent.

"Peas in Michigan and Wisconsin, seriously injured by flooding, 70 per cent.

"Sugar corn acreage much reduced by flooding in the West and drouth in the East, causing delays in planting. Crop will be very late, the date of ripening extending to time of frost. We look upon the result of the sugar corn crop as a very serious problem, one which may end in much disappointment. We should not be surprised if the crop will be as bad as last year's, but for short call it 75 per cent.

"Cabbage, poor crop in England, 70 per cent; short crop in Long Island and New England, 75 per cent.

"Turnip, short crop in New England and Long Island, 55 per cent.; poor crop in Pennsylvania and New Jersey, many fields ploughed down, 15 per cent.

"Beet, poor crop in Europe, 75 per cent.; poor crop in Pennsylvania and the East, 50 per cent.

"Carrot, poor crop in Europe, 70 per cent. California crop unknown.

"Spinach, miserable crop in Pennsylvania and Long Island, on account of drouth, 30 per cent.; in California, poor, 70 per cent.

"Cucumber, a considerable portion of the acreage started has been destroyed by drouth or flooding, much of which can never be replanted, because of the scarcity of seed stock. The conditions are very serious. Call it 65 per cent.

"Watermelon. In some sections these are same as canteloupe, cucumber, and, to a certain extent, squash. The same remarks apply to pumpkin, 80 per cent.

"Radish. Winter sorts, in Europe, injured during Winter, 80 per cent.; Spring sorts, 95 per cent.

"Onion seed, possibly a fair production of seed, yet certainly no surplus; 90 days yet remain before it is harvested, during which it will be subject to many risks of injury—95 per cent.

"Onion sets, Chicago crop injured by climatic conditions. Call the crop 85 per cent. Ohio crop small acreage, injured by climatic conditions, 60 per cent.

"Onion sets, Pennsylvania and New Jersey crop very small acreage, not over one-fourth of last year, growers being discouraged by low prices. Call it 30 per cent."

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President; D. S. Lake, Shenandoah, Ia., Vice-President; George C. Seager, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer.

C. H. Joosten, New York, has received advices from France that owing to very unfavorable climatic conditions there, fruit trees and ornamental stocks of all classes will be scarce, and much higher in price than last year.

Chester Holt, one of the oldest residents of Rochester, N. Y., died in that city last week. He was 84 years of age, and retired from the nursery business, in which he had been engaged for over forty years, three years ago. He leaves a widow and one son.

SAN LEANDRO, CAL.—S. Okada has started a large nursery establishment here.

OMAHA, NEB.—Articles of incorporation of the F. W. Meneray Crescent Company have been filed. The capital stock is placed at $40,000 and the purpose of the corporation is to carry on the business of the F. W. Meneray & Son, dealers in nursery stock.

SPARTA, TENN.—A $10,000 nursery, to be known as the Cumberland Nursery Company, has been organized, with headquarters at Maryland. The officers are: D. S. Pope, of this place, president; Wm. Cooper, secretary and treasurer; T. A. Pope, superintendent. The Messrs. Pope are practical nurserymen of much experience.

Custom House Examination of Trees

That the Customs authorities here are anxious to conserve the nursery and plant interests of the country, at the same time the Government requirements are complied with, is a fair inference from the following letter of Hon. N. N. Stranahan, Collector, New York, referring to a case of trees erroneously ordered into public store there. It was largely through Mr. Kelsey's efforts that the cumbersome and costly method of sending to public store all nursery stock entered at the New York Custom House was changed to the plan of wharf examination—a change that entirely avoids the vexatious and expensive delays incident to the former system and one that has given much relief and satisfaction generally to the trade.

New York, N. Y., May 25, 1903.

Frederick W. Kelsey, Esq.,
150 Broadway, New York City.

Sir: I am in receipt of your letter of May 22, enclosing correspondence relative to ordering into Appraiser's Warehouse one case of trees, ex S.S. Potsdam, which I have duly noted and beg to return herewith.

I find, by inquiry of the Second Division, where the entry was made, that the entry clerk, through inadvertence, ordered this particular package into Public Store.

I regret you were caused any annoyance, and have given strict instructions to the Deputy of this Division that hereafter clerks shall exercise more care in the performance of this service.

Yours respectfully,
N. N. STRANAHAN,
Collector.

H. C. S.

Seasonable Suggestions.

Mulberries ripen their fruit this month. If the seeds are washed free of pulp and sown at once, the beds kept moist, little seedlings appear in a short time, and by Fall are six to twelve inches high.

Hydrangeas intended for layering can be layered now. As soon as there is length enough, do the work at once. Increase can also be effected by green wood cuttings under glass.

Strawberry runners are forming. When pot plants are desired it is much easier to cut off the runners as soon as a few roots have formed, pot them and place in a shaded frame, where they soon establish themselves in the pots. When runners are scarce and valuable, this plan may not answer, as it means a loss of some runners; but it is far easier work.

Where grafting above ground has been done, it is necessary to carefully run a knife through the tying material when the union is assured, that the bark may expand freely.

As soon as the shoots of Japanese maples are of sufficient length they may be layered. The sooner the work is done, the better rooted the stock will be by Fall.

The blood-leaved peach is a handsome small tree in Spring. In the first place, it has large, light pink flowers; then follows the foliage—blood-red when fully expanded. It is a good selling tree. Its propagation is the same as that of other peaches.

The call for California privet for hedges is a constantly increasing one. Almost any quantity can be raised by green wood cuttings under glass. The wood will soon be in proper condition for use.

If the old flower heads of rhododendrons are picked off as soon as flowers decay, the plants are more likely to set flower buds than otherwise, though a plant that blooms profusely one year is not apt to produce many the next.

It pays to start young trees with straight leaders, even at the expense of placing stakes to them for a season or two. This is the time to do the work.

ENGLISH HOLLY.
Courtesy of Bobbink & Atkins, Rutherford, N. J.

The Japanese White-Flowered Dogwood.

Writers and others have frequently referred to the fact that the flora of Japan represents our own more closely than that of any other country does. Many of the trees and shrubs of that country represent ours closely. A case in point is that of the large-flowered dogwood, Cornus Kousa, formerly called Benthamia japonica. Some, on seeing this blooming in our woods, would take it for our Cornus florida, though to the practical eye differences in both flower and foliage are perceptible. In addition to this, it flowers about two weeks later than ours does.

No doubt it could be increased by working it on our common dogwood.

Oriental Poppy.

What a fine display is made by the oriental poppy at this season of the year! And, best of all, is the indifference of this plant to drouth. While almost all plants in the herbaceous borders are dried up, some of them being nearly dead, the poppies are in the height of excellence. The explanation is that the long tap roots of these plants find abundance of moisture deep in the ground. It is a hint, too, to keep stock for selling in pots, as it is hard to get these plants to live taken from the open ground in Spring, owing to the absence of fibres.

Hardiness of English Holly.

So general has the custom become of using the English holly bushes for Christmas, that what to do with the bushes afterward is a question many ask. The most of these hollies that are imported run in height from four to eight feet, and having been grown especially for the purpose, are generally well provided with roots, ensuring their living, if treated with ordinary care. To know just how far north they will live out in Winter requires further trials. So far as relates to Philadelphia and vicinity, the holly is hardy in any fair situation. The few large solitary specimens to be seen here and there prove this. That there are not more large ones arises from the fact that it was believed this holly was too tender for outdoor use, hence but few planted it. It is different now. Quite a number of small-sized trees are to be seen—bushes now; but let us hope they will become trees.

Many of those used for Christmas have been planted out of late, giving hope of seeing a great many of this beautiful holly in time. The probabilities are that it could be planted to New York City and along the coast further east for some distance.

There have been doubts expressed as to the reliability of these hollies to produce berries again, as they had when imported. The chances are much in favor of their doing so. The holly is supposed to bear, some male flowers, some female, and others perfect ones. That these imported ones had berries shows they were either female or perfect sorts.

The bright green leaves of the English holly and bright berries, more lustrous than those of our native species, make us desire very much that this plant will prove hardier than supposed.

The small, greenish white flowers of the holly appear with the new growth, just as it pushes forth in Spring.

A Hawthorn-Scented Shrub.

It is not a correct statement that hawthorns will not thrive in this country. They do very well, only asking that, if possible, a cool situation be given them. Heat, whether at the root or overhead, they can do without.

There is a substitute shrub, or small tree, for those who think they cannot have the hawthorn. It is Photinia villosa. The flowers appear almost identical with those of the hawthorn, as a twig cut off would prove, and there is much resemblance in the odor of the blossoms. To add to all, there are the clusters of scarlet berries in the Fall. It flowers with the hawthorns; and in old botanies the photinia was classed with cratægus, the name of the hawthorns. JOSEPH MEEHAN.

Scarborough, N. Y.

About five miles from the Tarrytown, N. Y., office of the F. R. Pierson Company are located the firm's nursery grounds, which embrace twenty-five acres of land. The mode of planting employed conveys to the visitor the impression that this is a private establishment, planted for effect rather than for nursery purposes. Excepting for a few young deciduous trees, the nursery method of planting in rows is entirely dispensed with. The planting is done with a view to obtaining specimens; this applies equally to both deciduous and coniferous subjects; thus, as previously stated, the grounds resemble a well-kept private estate more than a nursery.

Driveways wind in and out among the plantations. There are no closed gates at the entrance to bar passing vehicles, and a drive through the nursery has come to be one of the features of the neighborhood.

Among the evergreen shrubs, we notice some beautiful types of the blue spruce, one, of a drooping habit, being especially handsome. The variety is Picea pungens glauca pendula. Dotted among the borders are huge pillars covered with Crimson Rambler roses, which lend a striking effect to the balance of the shrubbery. Here are also a lot of fine standard grown wistarias, six or seven feet high and about six feet through. Japanese maples, in all their color and beauty of leaf, are seen at intervals along the borders, their rich colors being brought out to perfection through the proximity of some dark-leaved, sombre pinus. Ghent azaleas were a mass of bloom at the time of our visit; and rhododendrons, many of them in standard form, were also putting forth their massive blossoms. Some of the spiræas were also a grand sight, particularly the yellow-leaved one, S. opulifolia aurea. Many specimens of the golden oak were also seen here, and they are certainly among the prettiest of golden-leaved subjects.

With the great diversity of flowering shrubs, and the extensive plantings of herbaceous stock, including one of the most complete collections of perennial phlox, the grounds here present an ever-changing picture from week to week, beginning with earliest Springtime and not ending until the frost has destroyed the last vestige of Autumn blossoms.

The new greenhouse that Mr. Pierson had erected here last November is of the Pierson-Sefton type, 300 feet long and 55 feet wide. At present it is filled with commercial palms, including all the best varieties in various sizes. One has to stand in the center of such a house, filled with palms, in order to realize the vast space such a building encloses. On the terraces fronting the house are placed specimen bay trees and hydrangeas, alternately, along the whole 300 feet, which gives a most finished and attractive appearance to the massive glass structure.

In close proximity is located the rose-growing establishment of F. R. & P. M. Pierson. It is in this range that many of the finest American Beauty roses seen in New York are grown, and from the present condition of the houses it is evident that there will be a continuous supply of this rose right through the Summer.

THE AMERICAN CARNATION HOW TO GROW IT

By C. W. WARD

THIS magnificent volume contains 300 pages of the most valuable and instructive information on the subject of Carnation Culture ever presented. Every carnationist needs a copy; every grower should have a copy. Handsomely printed in clear large type on elegant wood cut paper. The illustrations are from life and are of an unusually high order of excellence. Order at once, or send 2-cent stamp for sample pages giving synopsis of contents, index, list of illustrations, etc.

Boston.

The Week's News.

The committee of arrangements of the Massachusetts Horticultural Society, at a meeting held Saturday last, decided on some change in the shows of rhododendrons and peonies. The rhododendron show, originally scheduled for June 5, 6 and 7, has been shortened to the last two days, and the peony exhibition has been advanced from June 13, as originally scheduled, to the same days as the rhododendron show.

The last regular meeting of the Horticultural Club was held Thursday evening, this week.

The adaptability of the new location of the Flower Market was well tested on the Friday before Decoration Day, when the market was crowded for two hours. The street in front easily accommodated the enormous number of wagons, which were stretched for a hundred yards either side of the door and lined both sides of the street. It would indeed be hard to find another location so near the center of the city, where so many teams could be gathered without congestion of traffic.

"The American Carnation," by C. W. Ward, is being welcomed by all who have seen it. A copy is kept at the Flower Market, where intending buyers view it and where orders may be left for its delivery.

Anderson & Williams, of Clematis Brook, are cutting a fine lot of Kaiserin Augusta Victoria roses now.

D. Hartford is bringing in some fine frame lily of the valley this week and is shipping considerable to New York.

F. J. N.

The thirteenth Annandale (N. Y.) Rose Show will be held on Wednesday and Thursday, June 10 and 11. John W. Bain, Red Hook, N. Y., is secretary. The judges will be: R. W. Allen, Patrick O'Mara, C. Elliott, John N. May and H. A. Siebrecht.

CANNAS—Started, $2.00 per 100; in pots, $5.00 per 100. Henderson, J. D. Eisele, Berat, Duke of Marlboro, Alsace, Allemania, Austria and Robusta. Cash with order.

ADDRESS THE GOOD & REESE CO., Springfield, Ohio

THE LARGEST ROSE GROWERS IN THE WORLD.

Mention the Florists' Exchange when writing.

If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN**, although it has been cultivated many years, is still scarce. As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there will be no change in price this season.

We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

CANADIAN NEWS

Ottawa.

News of the Week.

The weather is very dry; no ra this Spring. Very cold nights, wi several severe frosts, occurred the pa week. On the 24th, C. Scrim lost sor 2,000 bedding plants which he h planted out at a neighboring pleasu resort, everything going except pa sies. Carnations do not seem to ha suffered from the cold, although o lot had 10 degrees of frost; but the ve dry weather keeps the plants just e isting.

Rose planting in the houses has co menced in earnest. Young plants a looking well. Quite a lot of Americ Beauty will be planted this year.

We are right in the midst of the pla trade. This year the first of June h been proved the earliest date to pla out tender stock and put out boxes a baskets. As usual, we are not prepar for the red geranium rush; with so the plants are already cleaned out a the business not half done. The mand for verbena boxes has doubl and some good work has been turn out in that line. The plant trade very good. In the stores, business co tinues fair, and funeral flowers a stock generally good.

R. Wright's store and greenhouse Spark street are being pushed.

Graham Gros. and C. Scrim are an iously waiting for the finish of Spring sales that they may comme building operations.

Mr. Creighton, representing Dreer, Philadelphia, was in town last we and spent Sunday here.

LONDON, ONT. — Roses, Ameri Beauty, fancy special, $20.00 to $30 culls and ordinary, $5.00 to $15.00; Br and Bridesmaid, $4.00 to $6.00; Gol Gate, $4.00 to $6.00; Kaiserin Augusta V toria, $4.00 to $6.00. Carnations, infe grades, all colors, $1.00 to $2.00; stand varieties, $2.00 to $3.00. Lily of the v ley, $2.00 to $3.00.

Warm weather brought on a heavy c during the last two weeks in May, prices tumbled to the lowest notch. quality also deteriorated, particularly Bride and Bridesmaid. Carnations getting smaller, but are still of good qu ity. The supply has been rather lar than the demand, excepting for wh which, with the constant call for fune work, has been kept up close. Bedd plants are moving fast, with prices less than 25 per cent. higher than those last year.

3,000 COLEU

Fine plants, from 3 inch pots, $3.00 per 100.

CANNAS Fine sorts, Mme. Crozy Austria, 4 inch pots, $5 per 100. Cash with order.

Philadelphia.

ws of the Week.

This has been the busiest week en in June for a long time; in fact, ny of the stores show as much anition as is seen around Christmas ne. All this is caused by the large of weddings and the commencent exercises at several popular lies' colleges. All of the retail stores a share of this business. H. H. ttles, Hugh Graham, Robert Crawd, Jr., and George Craig were all rking hard. Joseph Kift & Son also d all they could handle. Pennock os. worked their full force up to 11 n. Monday and up to 2.30 a.m. Tuesy; this firm had over 300 orders for flowers for Bryn Mawr College for ednesday, in addition to several wedgs, and from present appearances s good work will keep up for a few ys, as nearly every store has orders oked ahead.

nnsylvania Horticultural Society

The special meeting for the exition of outdoor roses was very sucsful, and a grand lot of roses was ged—rather an exceptional collecn for such a season as this. The gest exhibitor was Wm. Robertson, rdener to John W. Pepper, Esq. His ibits took first for six vases, three oms each, and first for one vase of brid and one vase of tea roses. John Cleary, gardener to Wm. Weightn, Esq., took first for the best coltion of roses. There were a great ny more hybrid teas and tea roses ged than in former years, showing tendency of the public to grow se plants out-of-doors. In these sses the varieties Kaiserin Augusta toria and Maman Cochet predomind. Probably the most pleasant surse was the grand vase of Liberty in collection of Wm. Robertson; these re planted out last year, protected y with short manure around the se during Winter and not a plant s lost. All are now blooming freely l producing even better flowers than obtained under glass.

r. Robt. Huey made a short adss on outdoor roses, and described ne new varieties he had tried. He ted that he still believed in budded es for outdoor planting.

Ir. Jones, of Conard & Jones, West ove, Pa., stated that they had been erimenting with root grafting, putg hybrid roses on to Crimson Ramr roots, and, so far, they felt enraged, as the plants did well and no kers were sent up.

rists' Club.

The meeting on Tuesday was well ended. A paper on wrought-iron e was read by Walter H. Whetstone. is was considered the most pracal paper yet given on this subject. answer to a question how to tell el from iron pipe, he said the only t he knew of was by nitric acid. A. Hamilton, an associate member of club and a representative of the tional Tube Co., or Pipe Trust, had pared a paper upholding steel pipe, l took exception generally to Mr. etstone's remarks.

onvention matters came in for some ention. The time from here to Milukee by rail is about 30 hours; the e will be $27.75 for the round trip hout sleeper charges. Friend tt's invitation to attend church in ffalo is appreciated, but it would an to leave here Saturday.

reparations are going on for the to Morrisville on the 17th.

Vednesday at 5.30 p.m. a messenger boy was seen going south on a Twelfth street car carrying a bride's shower bouquet in one hand and a bridesmaid's bouquet in the other. He stood on the front platform. The ribbons and flowers they were fastened to on the shower bouquet rested on the platform. People entering the car kicked the ribbons or trod upon them, as our German friend would say. The next time you send a messenger boy with bouquets don't do it. DAVID RUST.

Chicago to Milwaukee.

The Chicago Florists' Club have selected the Chicago, Milwaukee & St. Paul Railway as the official road from Chicago to Milwaukee for those wishing to attend the S. A. F. convention to be held in that city in August. We have made arrangements for a special train from Chicago, and we invite all florists passing through Chicago to join our party. In buying their tickets, see that they read via Chicago, Milwaukee & St Paul Railroad from Chicago to Milwaukee.

WALTER KREITLING
Chairman Transportation Committee.

Worcester, Mass.

News Jottings.

C. A. Keyes is one of the pioneers in the plant business here. Nearly forty-five years ago he began raising tomato plants at a time when very few knew what they were. As he expresses it: "I was obliged to give away plants in order to induce people to try them." Mr. Keyes celebrates Memorial Day with a runaway, and this year was no exception.

Potter & Cousins, of West Boyleston, make a specialty of pansies. The month of May as a whole was the best they ever had. Mr. Cousins, of this firm, has bought out George Mills, of Concord Junction, Mass., and will take possession in about a week. He has already on the grounds material for a large iron house.

H. F. Littlefield reports a rapidly increasing business. His Memorial Day trade was the largest he ever had. Mr. Littlefield lately bought a piece of property near his residence and has erected on it a good-looking barn. He contemplates building another greenhouse in the Fall.

Fisher & Sons say this is the best season they ever had, especially in their new store, which was erroneously reported as closed.

C. H. Green, of Spencer, also did a big trade, experiencing a shortage of stock.

A correspondent for a local paper states: "C. B. Shaw, representing Lord & Burnham, of New York, will erect a $10,000 conservatory for Winthrop L. Lewis, of Marlboro. The building will be devoted exclusively to carnations and wil be one of the largest for the cultivation of one particular flower east of New York. Mr. Shaw brought with him seven men and will employ others in Marlboro."

George W. Sutherland is installing a new engine.

Schneider, formerly with A. A. Hixon & Son, started in business for himself a little more than one year ago with two houses. Now he is considering the erection of a third one in the Fall.

CAROLUS.

New Bedford, Mass.

The New Bedford Horticultural Society at its last meeting decided to hold a flower show the latter part of September next.

PLANTS and FLOWERS

PANSIES.—Peter Brown, Lancaster, Pa., favored this office with some samples of pansies the past week that were of remarkable beauty in coloring, and of large average size. They were of the Masterpiece and Mme. Perret strains, and included about 100 different sorts.

The Pennsylvania Railroad Company will close three of its four large greenhouses at Altoona, Pa. The railroad company is gradually abandoning the cultivation of flowers.

Peter Barr, of London, has arrived home from his globe-trotting tour, looking younger even than when he went away four or more years ago.

Society of American Florists and Ornamental Horticulturists.

All the transportation lines represented in the Western, Central, Trunk Line and South Eastern Passenger Associations have now announced the special rates for the S. A. F. convention at Milwaukee, Wis., August 18-21, 1903. The New England lines only remain to be heard from, and there is no doubt that they will co-operate in the rate agreed upon, which is one and one-third fare on the certificate plan.

It now becomes the duty of State vice-presidents and all others interested in seeing a record-breaking meeting at Milwaukee to get to work and organize so as to get out a creditable representation from their respective districts.

Local agents of the railroads over which parties will travel will be glad to lend active assistance by sending out circulars and otherwise, toward securing a full attendance.

The preliminary program of the convention, which will be sent out early in July, will give full explicit directions as to the manner of procuring tickets and certificates. In the meantime all inquiries addressed to the secretary's office will be promptly answered and all available information regarding any department of the convention will be cheerfully furnished.

WM. J. STEWART, Secretary.
79 Milk St., Boston.

Nature Study.

Nature study, as the cult has aptly and conveniently come to be called, is assuming gratifying proportions throughout the United States, receiving, as it has done, and is doing, encouragement from all those who desire that the youthful generation should be made familiar with the living (and dead) things they see around them. The subject has been taken up and is being fostered by schools, clubs and societies, and the influence which such teaching is exerting is being felt more and more. Much good work has been done along this line by the Cornell University in the distribution of useful pamphlets, as well as by lectures; and Professor Bailey has recently published a book on the subject in which valuable hints and information for the best conduct of the work are furnished.

One of the most energetic bodies interested in the development of the reigning fashion is the Steuben County (N. Y.) Agricultural Society, of which H. L. Drummer, Bath, N. Y., is manager. That association this year offers premiums of the following sums: Children's prizes, $1,000 (individual work, $550, and grade work, $450). A goodly portion of this amount is offered as prizes for plants, flowers, design work, vegetables, etc., the exhibits of school children at the forthcoming fair of the society, which takes place September 29 to October 2 next, while money premiums, books, etc., are to be given for the best essays on subjects dealing with plant and insect life, and drawings of plants and flowers from nature.

In his report to the executive committee of the society, Mr. Drummer makes the following statement relative to the work done and the methods of procedure employed by him:

"Since my first appearance before your committee on April 4, 1900, when the plan of working Nature Study in our public schools was first unfolded to you, the work accomplished in 1901 was much greater than that of 1900 by 600 entries and the work done in 1902 more than doubled that of 1901.

"The plants, flowers and vegetables shown, according to Professor Hunn, the judge of the exhibits, were excellent and even far superior to the specimens generally exhibited at such occasions by adults

"The system of paying premiums in cash is far better than that made use of in the first and second year, when articles for prizes had to be collected from business men and when in many cases articles or cash prizes had to be substituted when the first donor had gone out of business, or had left the town Under the present cash system your manager has time for other work viz., to arrange a course of lectures, church services, field days, and so forth.

"The work of 1903 is now well under way and gives twenty days for the instruction of the children in the study of nature. Seven sermons have been delivered in the various churches of our town on the most interesting subjects of the book of nature as revealed in the Bible, and the manager is at present engaged in making arrangements with the clergy of other towns to take up this work Ten lectures will be given in the course of the Winter in the Casino Opera House, and on the evening of Arbor Day, May 1, 1903, an entertainment was prepared for the school children at the same place The third field day will be held July 15, 1903, and Children's Day at the Fair will close the work for the current year.

"A new feature has been introduced this year, 'grade work,' and your manager has been permitted to lay out a course in drawing from nature in the public schools, to furnish topics of essays and to encourage the schools to make collections of insects, plants, minerals and similar interesting objects for exhibition at the next Fair.

"Without cost to the society your manager has put out 500 grade catalogues for work in the public schools as grade work. With the permission of our secretary the prizes were made payable in cash to the board of education, or to the trustees of a school, and all moneys received as prizes shall be used for the permanent improvement in schools or on school grounds.

'This plan, carried out with the assistance of the Agricultural Society, will not only teach the boys and girls to go about with their eyes and ears open, but it will help the trustees to improve the condition of their schools and school grounds.

"The Hon. Charles W. Gillett, M. C., informs me that he will send me 5,000 packages of seed for distribution in the schools among the Steuben Nature Study Workers, and assures me that he will send me more later on."

In the natural order of things the florist's trade is bound to benefit from work of this kind, and, it seems to us, those striving to promote it should receive the most practical encouragement at the hands of the craft, as well as of the National Society. A medal, a few donations of plants as premiums, or even hard cash, would not go amiss; they will aid a most worthy object and bring their own reward as the years pass.

The diverting of the governmental efflux of free seeds into educational channels of this character merits, at least, no condemnation, and is praiseworthy to the extent of the interest in the growth and care of plants which it will engender among the young recipients.

Government Exhibit at St. Louis.

A unique feature of the Government's open-air exhibit is the school garden, that occupies a large section. This exhibit is under the personal direction of Professor Wheeler, of Michigan, of the United States Department of Agriculture. The liberal space allotted to this exhibit has been cut up into numerous subdivisions, and each of these subdivisions in turn is turned over to the various St. Louis schools. A class of pupils is selected by the principal of the school so honored, and the actual work of planting and cultivating the garden is left to the pupils, under, of course, the general direction of Professor Wheeler. Liberal prizes are offered for the best cultivated garden and for the best results. The sight of the little tots in their knickerbockers and gingham dresses, their sailor hats and sunbonnets, equipped with hoe and rake, is a sight all too seldom seen.

The immense grass garden grown under the personal direction of Professor Spillman, who was selected by the Bureau of Plant Industry to have charge of the entire open-air exhibit, is one of surpassing value and interest. This grass garden occupies on the five-acre plot. In the northern section of that exhibit are a series of sand dunes, constructed so as properly to exhibit the sand-binding grasses. A circular collection of 20 plots of an average size of 10 x 20 feet are planted to the best tested varieties of lawn grasses. These plots are artistically arranged, and are separated by gravel walks. The small lawns are marvels of the landscape gardener's art, and the turf is so thick and so well kept that it appears as a velvet carpet.

Still further south is the section devoted to the ornamental grasses. Here is shown the pampas grass growing up 10, 12 and 15 feet high, and all the other ornamental grasses, including the ribbon grasses, attaining a height of three and four feet down to the dainty little sweet vernal grass that seldom reaches a foot in height.

The seed production section will be of immense value to the agriculturalist. Here the seeds grown in all parts of the world are tested side by side. The growth and results are carefully noted.

Another section west of that devoted to seed production is one equally important and interesting, illustrating the fiber plants, their growth, and the best approved methods of handling. West of this are displays of the poisonous and medicinal plants. Growing side by side are the poison and its antidote. Prominent in the poisonous section are plants that are injurious to stock, notably the famed loco weed. Another dangerous plant is the wild parsnip, little less desirable than the loco plant. In this section are shown the best methods for the extermination of the poisonous plants and also the best remedies for the treatment of horses and cattle after they have partaken of the poisonous growths.

In the medical section beautiful beds of poppies are to be seen, and the methods of obtaining opium and all of the medicines and poisons produced from the weird drug are shown. Here, too, is the foxglove, from which is made digitalis and the deadly night-shade, from which is produced belladonna and numerous other medicinal plants and herbs.

Obituary

John Eldering.

John Eldering, at one time a member of the firm of Eldering Bros., Overveen, Holland, died of pneumonia at Newport, R. I., on May 27. About twelve years ago he was well known to the seed trade of the Eastern States, and was for a time connected with J. C. Vaughan's New York house. For the past five years he was associated with the firm of J. R. Collins & Co., contractors and decorators, New York and Newport. He leaves a widow, but no family.

Wm. E. Endicott.

Wm. E. Endicott, a gentleman well known in horticultural circles in Massachusetts, and a highly respected citizen of Canton, Mass., died there suddenly on June 3.

William Ellis Endicott was born in Canton April 1, 1842. He was educated in the schools of his native town, Chauncy Hall school, in Boston, and Prof. Agassiz's school in Cambridge. He began teaching in 1859 in Sharon, and taught later in Hingham and Quincy.

When the call came for volunteers, he enlisted in the 10th Mass. battery, and served with that command during the war of the rebellion. He was captured by rebels, and was confined in Libby prison for some time.

Upon the expiration of his term of enlistment, Mr. Endicott returned to his home where he resumed teaching in the public schools. He had been the principal of the Christopher Gibson grammar school of Boston more than thirty years.

He was greatly interested in horticulture, and for more than twenty years was the librarian of the Massachusetts Horticultural Society.

He was a man of sterling integrity, unpretending in manner and possessed of a kindly and loving disposition.

Mr. Endicott was a direct descendant of Gilbert Endicott, brother of the famous old John Endicott, later governor of the Massachusetts colony.

FIRMS WHO ARE BUILDING.

EMANS, PA.—Kroninger & Yeager are building new greenhouses.

NO. ABINGTON, MASS.—W. H. Wyman is building a new greenhouse.

SCHENLEY PARK CONSERVATORIES, Pittsburg, Pa.—A new fern house.

PITTSFIELD, MASS. -R. Engelmann & Son are erecting a carnation house, 150x20 feet.

Reflections on Current Topics.

MR. EDITOR: I at all times greatly njoy illustrations that illustrate. That the reason why I was delighted with e picture of what was entitled "The holesale Cut Flower Market, Coogan uilding, New York, Easter Saturday," a Western trade contemporary. The lustration referred to is indeed educaonal. It shows, in a manner, part of e evolution of the cut flower busiss in Manhattan. Who would have ought, a quarter of a century ago en, that the beautiful products of e florists were to find their greatest tlet through what may be called the gean Sea; that the compatriots of nacreon and Esop, of Dionysius and ioscorides, of Thucydides, Plato, phocles and Socrates, would have ffed their skirts and turbans, simuted law-abiding American citizens, d applied themselves to the peaceful ursuit of vending posies! Such a ansformation is enough to make Bouquet Johnny" turn over in his rrow bed.

But what would the cut flower trade without the Greeks; and who can uge how great a factor they have en in the development of America's oral industry? It is safe to say, that ithout them, or some individuals like em, our greenhouse expansion would t have reached its present extent. Without the Greeks, too, it is a queson whether the number of the "legitiate" retail florists would have been eater or the profits of those in the eld larger than they are to-day. Cerin it is, the grower would have been e poorer. My own opinion is, that e street flower vendor injures the tail florist, who claims to be the only wful posy merchant, to the same exnt as does the street shoe-string ller the shoemaker, or the curbstone llar button dispenser the haberasher. It is a progressive sign of the mes that the trade generally is comg to view the Greek flower dealer in e light of his greatest usefulness, and at in most cities—excepting Chicago -he is permitted to ply his vocation nmolested, to his own and the cut ower grower's advantage, and no one's urt. (I will not include the commison man.)

Then there is the case of the plant eddler. Though we hear but little bjection raised to him as a competitor the "legitimate,' he in his particular pecialty stands really in the same retionship to the retail store man as the reek does in his. One has only to atch the plant hawker in his daily erambulations through the highways nd byways of our large cities to mark e extent of the service he renders the ainstay of the florist business—the rower—as well as the very valuable issionary horticultural work he perrms. True, the license fees that each these peripatetic merchants pays for e privilege of plying his vocation is ut a drop in the ocean as compared ith the high rentals retail store men isburse. But the good resulting to a ommunity from any branch of industry within it is not measured by the um that satisfies the real estate owner or the use of structures employed in e operation of that industry. The lant auction room, the Greek, the lant peddler, as well as the retail ower and plant store, are each filling heir own niche in the horticultural orld, and serving their own useful urpose; therefore each has a right to xist and to persist without molestaion or condemnation so long as the perations of each meet the requirenents demanded by morality and unicipal legislation.

* * *

I was sorry indeed to read of the vaning interest in the Chicago Florists' Club, and that there exist in that body what are characterized by one of your contemporaries as "factions." That word implies strife, something that never yet led to progress, and something that should never enter into associations such as florists' clubs are—bodies banded together for social and mutual improvement ends. Better no club at all than discord and antagonism among the membership. Why does not the Chicago Club emulate the New York one, for instance, and inaugurate a $5.00 a ticket outing, as a stimulant o harmony. They, too, might be able o defray the cost (or a large part of it) of the affair by importuning the Barkises in the trade for advertisements in a program of the "sports." This seems to be a latter-day "easy method" of getting up funds for free entertainment, so far as clubs are concerned, and is being worked nowadays, without compunction, for all there is in it. At least, so it appears from solicitations of one kind or another made to

JOB.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange will publish every week voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

W. H. Salter, Rochester, N. Y. I am receiving some very gratifying testimonials regarding the goods I am offering. The quality seems to suit well.

C. H. Joosten, New York, calls attention to his offer of Japan fern balls, Japan bamboo cane stakes and Cycus revoluta stems, and to the well-known quality of Fostite to prevent and check mildew and black rot on plants and carnation rust. A timely application will save your crop. The supply of these goods is limited and early orders are advisable.

Job and the Mule Poem.

Editor Florists' Exchange:

Judging from Brother Rudd's comments in a contemporary upon the grandiloquent effusion of "Job," he evidently thinks he has struck "three of a kind." Allow me, Mr. Editor, to emerge from obscurity long enough to remark that at various times I have been likened to Brother Rudd, however hard such similitude may have been upon the gentleman in question; but this is the first time I have been so distinctly honored by Mr. Rudd himself. The verses alluded to, in many respects, so truthfully describe some of Brother Rudd's sterling qualifications that I have no objection to being considered in the same class. "Job" might make it a quartette by coming in as high tenor.

"The mule he likes to hear his voice,
And so does Job."

JOHN G. ESLER.

Job and Birnie's "Burns" Prize.

Editor Florists' Exchange:

I have to extend an apology to "Job" for being a little dilatory in setting myself right regarding that bowling prize, but I have been working twenty hours a day for the last month (could "Job" do that on a milk stimulant?) and have not had time to set his mind at rest; for, notwithstanding his assertion to the contrary, one can read between the lines that resentment runs rampant.

Now, my offer to the New York Florists' Club committee was worded in the following terms (I quote from memory): "I will donate a handsome copy of 'Burns' to the representative of the trade press making the highest score in five frames; and may the best man win." That was all. Is "Job" a representative of the trade press? Does that account for his evident chagrin? By exercising a little of "Job's" own and only attribute—patience—we may yet be able to put our thumb on the flea.

By the way, "Job" has struck a very interesting topic when he mentions the back numbers of the trade press. He seems, as I understand him, to coincide with those who run the trade press down, and with a slight vein of sarcasm quotes from a contemporary a grower's honest confession of having learned something from the press. Some years ago, a writer of hints, notes, reflections, inflictions, or something else, gave the formula for potting rooted cuttings as follows: "Take the pot in the left hand, put in a little soil, and then put the plant in the pot roots down." Now, a piece of valuable information like that might seem a little superfluous to-day, but at the time it was written we had an influx into the profession of "stickit ministers," shoemakers, carpenters, etc., to whom, no doubt, the hint was of value. No wonder their "advancement in horticulture" was rapid. They have left the old time grower far behind so far as printers' ink is concerned. Still, the grower to the manner born bobs up serenely when occasion requires.

"Job" will find a great many hints of as much value as the above by looking over the back numbers of the trade papers, but it may be that the writers of those back number screeds do not know so much to-day as they did then—at least, they do not know so many things that ain't so. JOHN BIRNIE.

The rage at present in London is the collecting of little plants, which are all to be obtained growing in the tiniest of fern pots, and arranged on shelves round a miniature greenhouse to be placed on the table. The Bond street florists cannot meet the demand.

BUSINESS DIFFICULTIES.

ATLANTA, GA.—John A. Lambert, the florist, has filed a petition asking that he be declared a bankrupt. In the petition he schedules his assets at $100, while his liabilities, he says, amount to $6,082.50. The petition was filed by S. D. Johnson as his attorney.

CARNATIONS

Memorial Day.

Just as Thanksgiving Day marks the increase in prices of carnation flowers, this holiday marks the decline, and there now remains but one thing to do with the houses, and that is to get all you can from them, and to get this with as little expenditure of labor as possible. A heavy cutting at Memorial Day is always dependent on the past treatment; and when propagation has been heavy in the Winter months, there will be a noticeable difference in the cut. Good stock is an essential, however, and the cut now is not worthy of serious consideration at propagating time. With plants in good shape in the Fall, work for a crop at Christmas, and as a rule, the yearly result will be satisfactory. To be sure, carnations sell well at Memorial Day, but to get flowers in Midwinter is the problem, and if this is done the Spring blooms will take care of themselves.

The finest white carnation we have ever grown is Queen Louise. It has proved itself a wonder throughout the year, and has shown remarkable keeping qualities during the warm weather. Morning Glory has been sleepy, and is distinctively a Fall and Winter carnation. I have mentioned before the tendency of the yellow varieties to improve, and this is still noticeable. Cressbrook and Mrs. E. A. Nelson have shown weakness, and taking them as a whole, they have been unsatisfactory throughout the year, as we have grown them.

Some time ago I mentioned a seedling carnation of Rhode Island breeding, called Wild Rose. Here again, we see a variety which stands the warm weather, and as a keeper it has proven itself without a superior. By summing up the varieties in this manner, we can form plans for benching, and those which do not stand the warm weather can be placed together and can be discarded early, if some must go to make room for Spring stock. I do not condemn a variety because it is weak in this respect, for the reason that it may pay for its space during the Fall and Winter; but if some must be discarded, these should go first. To judge a variety correctly, it should be watched not only early in the Fall and in Midwinter, but at Memorial Day, and advantage should be taken of its strong points and its weaknesses should be guarded against by judicious planting.

New Introductions.

A few weeks ago I received a few plants of Messrs. Baur & Smith's new carnation, Indianapolis, with a request to give them a thorough trial. This gives the introducer a chance to test his variety in New England, and gives us an opportunity to become acquainted with this much-talked-of acquisition, for which we are grateful. The custom of trying new varieties in different sections of the country before disseminating them is certainly a good one, and it is worthy of a wider practice. Should it be carried out by more introducers I firmly believe there would be fewer poor varieties on the market, for a carnation which will not do well in different sections of the country is weak somewhere. Soils, of course, vary, but let the introducer recommend a certain kind of soil and try his variety under different conditions before asking the growers in the different sections to buy.

Soil for Carnations.

Opinions differ on this question, and there is no reason known to me why they should not. Maine is not like California, and Connecticut differs from Illinois; and we see good carnations grown everywhere. What, then, is the requisite for a good carnation soil? I have seen them well done in almost pure clay, and have seen equally as good carnations obtained in a sandy loam. Taking all things into consideration, I prefer a medium heavy loam, with some vegetable fiber in it, and with manure enough to make it sufficiently rich to support the plant until feeding on the benches is commenced. The practice of plowing a certain area of sod land after putting on a coating of manure, and using this, is no doubt a cheap method of preparing soil, but I have had very little experience with this method. Some three years ago we laid up a compost of sod and only a small quantity of manure, the sod coming from a piece of very light upland. We also lay up annually a compost of heavy soil, composed of sod from an old pasture, with considerable clay in it, and cow manure, using these in the proportion of seven parts of soil to five parts of manure. This is our rose soil; and for carnations we use this and the light compost in about equal parts after they are thoroughly mixed and pulverized; and on planting we add a small proportion of sand to this mixture. The result is a medium heavy soil, and yet one which contains sufficient vegetable fiber; the sand has the tendency to make it friable and easy to work. I do not believe that it is necessary to have a heavy soil, but if the soil will hold moisture without becoming waterlogged and therefore sour, much less care and attention to watering will be necessary.

FIELD OF TRUE LILIUM HARRISII IN BERMUDA.
[Courtesy of H. C. Steinhoff, New Jersey.]

With horse manure we have had a great deal of experience, and are now fully convinced that, at least for rose growing, it is decidedly inferior to cow manure. We have found, also, that with carnations we have better results where no horse manure is used. I know that the horse manure is cheaper, and that many employ it, but for carnation culture I should not hesitate to recommend the use of cow manure in preference, as I believe it will give a great deal more satisfaction to the grower.

The practice of green manuring is becoming more and more popular, and the farmer can here teach the florist some very important lessons. Take, for example, a certain tract of land which will ultimately be used for soil, and anything which will add to the fertility of this piece of land will in the end become of benefit to the plants for which the soil is used. "By green manures is meant any crop that is grown primarily for the purpose of improving the soil, and not for the harvested crop." I take the liberty of quoting from Voorhees, who is an authority on this subjest: "It is essential that the soil contain mineral elements, phosphoric acid, potash, and lime, but a crop of a nitrogen-gathering plant will add to land enough nitrogen to support several crops of wheat. By plowing under a crop of a leguminous plant, such as red clover, cow peas, or soja beans, vegetable fiber is also added to the soil which is of value, especially if the land has been cultivated for some years, and therefore deficient in this. For field culture this is especially valuable, and if green manuring were better understood it would be more widely practiced. The presence of nitrifying bacteria in the soil is essential, but they are usually present in fields which have been under cultivation, and the presence of these bacteria can be recognized by the nodules which are formed on the roots of these leguminous plants. Keeping these points in mind, the securing of suitable soil is comparatively easy."

W. R. PIERSON.

Carnations Planted in 1903.

The subjoined information arrived at this office too late to be included in the tables appearing on pages 622 and 623 of issue of May 30:

E. J. TAYLOR, Southport, Conn., has planted in white: Queen Louise, 5,000; Flora Hill, 3,000; May Naylor, 1,000. In light pink: Daybreak, 4,000; Maud Dean, 4,000; Genevieve Lord, 20,000. Dark pink: William Scott, 15,000; Mrs. Frances Joost, 15,000; Mrs. T. W. Lawson, 500; Cressbrook, 1,000. In red: G. H. Crane, 2,000. Crimson: General Gomez, 2,000; General Maceo, 5,000; Governor Roosevelt, 4,000. Yellow variegated: Eldorado, 5,000; Golden Beauty, 500. White variegated: Mrs. G. M. Bradt, 5,000; Prosperity, 5,000.

Mr. Taylor commenced planting May 5, but had to suspend operations owing to the dry weather.

Richard Witterstætter, Sedamsville O., has planted in white 5,000 Albatross in dark pink, 1,000 Mrs. Lawson, 2,00 Enquirer; red, 1,500 Estelle, 500 Adonis 4,000 of a seedling; crimson, 1,000 Crimson Estelle (seedling); also 5,000 vari ous seedlings.

BRIEFS FOR BUSY FLORISTS.

HYDRANGEAS.—If these plants ar not intended for early forcing nex year, they may just as well be plante outdoors. Give them a good ric growing soil and lift them earl enough in the Fall to avoid freezing If, however, it is desired to force th hydrangeas early next Winter, it wi be better to keep the plants in pot right through the Summer, shiftin them into large sizes whenever necessary.

BOUVARDIA.—This plant is no grown nearly so much as formerly, ye a bench of it flowering in the Winte time is always a source of profit. Th young stock should be planted out doors to get strong plants for Winte blooming, and in order to have the stocky by lifting time they should b pinched back several times during th growing season. Early in Septembe is about the best time to lift them fro the ground and transplant in th greenhouse, and if ordinary care is ex ercised and the glass overhead shade for a few days, the plants will not su fer from the operation of transplan ing.

GENISTAS and ACACIAS.—Th larger plants of these may just as we be put outdoors at this time. Choo a location where the plants will l sheltered from heavy winds, as if the are at all top-heavy they would easi get blown over and damaged. Cu them well back, but not into the o wood, excepting where it is necessa to preserve the symmetry of th plants. Try to have them even an well-balanced in shape when in flow by cutting them back now. If it not desirable to put them in larg pots, take out as much of the top so as can be done without injury to th roots, and fill in with a rich compo Half and half loam and well-rott manure is the best mixture. Ke them plentifully supplied with wat at all times, and, aside from cutti back an occasional strong growth, th will need no other care until they a housed in the Fall.

FICUS ELASTICA.—When th young plants are well rooted in 3-in pots, instead of putting them in larger sizes, prepare a place in th garden and plant them out for th Summer. Place them two feet apa and three feet between the rows, dri ing stakes at the corners of the b and spreading any kind of thin clo over the plants to keep them shade In a week or ten days' time, commen to remove the shade gradually, takin it off about an hour earlier each da This will inure the foliage to the fu force of the sun and eventually th covering can be taken off altogethe Frequent watering will be necessa all Summer, should the season prove all dry, and each plant should be ti to a stout stick to prevent the win blowing it about and loosening th roots. By the latter part of Augu it will be found that the plants hav made a far superior growth to wha could have resulted in the greenhous and their care was light compare with indoor culture. They must b lifted and potted, however, before th nights become cool, and, when this done, care must be taken to get th roots working in the pots as quick as possible. To this end a space in th greenhouse, either on the bench or o the floor, should be set aside and fille in with stable litter such as would b suitable for a hotbed. Into this mate rial the newly potted rubbers shou be planted and the bottom heat th supplied will keep the roots movin without a check, and not a leaf wi be lost. In about ten days they ca be taken from the hotbed and place on the benches, when they will b found to have made as large spec mens as would have been obtained b about two years of ordinary pot cul ure.

Chrysanthemum Society of America

PRELIMINARY PRIZE LIST FOR ANNUAL EXHIBITION IN NEW YORK, NOVEMBER 10, 1903.

Editor Florists' Exchange:

Subjoined is a copy of the premium list for the exhibition of the Chrysanthemum Society of America to be held in Herald Square Auditorium, New York City, November 10 next. Notice particularly the fine list of special prizes. FRED. H. LEMON.

Cut Flowers—Chrysanthemums.

Class.		—Premiums— 1st.	2d.
1.	50 blooms, one variety..	$30.00	$20.00
2.	50 blms. not less than 3, nor more than 5 vars.	30.00	20.00
3.	Collection of 30 vars., 1 blm. of each, stems not to be less than 10, not more than 15 ins.	20.00	12.00
4.	25 blms. any yellow var.	15.00	10.00
5.	25 blms. any white var.	15.00	10.00

22.	6 blms Timothy Eaton..	4.00	2.00
23.	6 blms. Yellow Timothy Eaton	4.00	2.00
24.	6 blms. Mme. Carnot, artificial supports allowed	4.00	2.00
25.	6 blms. Yellow Mme. Carnot, artificial supports allowed........	4.00	2.00

(Classes 15 to 25, inclusive, open to private gardeners only.)

Class.		1st.	2d.
26.	18 blms. in 6 vars., 3 flowers of each, new vars. of 1903.........	12.00	8.00
27.	12 blms. in 4 vars., 3 flowers of each, new vars. of 1903.........	8.00	5.00
28.	6 blms. in 3 vars., 2 flowers of each, new vars. of 1903.........	5.00	3.00

(Exhibitors can compete in one class only of classes 26, 27, 28.)

Class.		1st.	2d.
29.	36 blms. in 6 vars., 6 flowers each.........	25.00	15.00
30.	18 blms. in 6 vars., 3 flowers each.........	12.00	8.00
31.	18 blms. in 3 vars., 6 flowers each.........	12.00	8.00
32.	5 blms. of any var. in commerce	6.00	
33.	6 blms. of any white var., certificated by the C. S. A. in 1902..	4.00	2.00
34.	6 blms. of any yellow var., certificated by the C. S. A. in 1902..	4.00	2.00
35.	6 blms. of any pink var., certificated by the C. S. A. in 1902..	4.00	2.00
36.	6 blms. any other color, certificated by the C. S. A. in 1902.........	4.00	2.00

The following kinds are eligible in classes 33 to 36, inclusive:

Algoma,
Amorita,
Columbia,
Convention Hall,
Globosa Alba,
H. W. Buckbee,
Henry Sinclair,
Minnie Bailey,
Mlle. Marie Liger,
Mrs. Harry V. Casey,
Mrs. J. J. Mitchell,
Miss Stella T. Elkins,
R. E. Richardson,
Sephia Uwanta,
Yellow Eaton.

New Varieties.

SEEDLINGS, SPORTS AND UNDISTRIBUTED IMPORTATIONS.

Class.		Premium
37.	6 blms. any white var.........	$5.00
38.	6 blms. any yellow var........	5.00
39.	6 blms. any pink var..........	5.00
40.	6 blms. any other color........	5.00

Entries in classes 36 to 39 inclusive are also eligible to compete for the C. S. A. certificate on compliance with the rules governing the award of certificates.

Class.		1st.	2d.
41.	Collection of Pompon vars.	15.00	10.00
42.	Vase of Anemone flowered vars.............	10.00	5.00
43.	Vase of hairy and plume vars.	10.00	5.00
44.	Vase of single vars.....	10.00	5.00

Classes 26 to 44, inclusive, to all chrysanthemum growers.

Plants.

(Open to all.)

Class.		1st.	2d.
45.	3 specimen bush plants, distinct vars........	40.00	20.00
46.	3 specimen standard plants, distinct vars., not less than 24 ins. of stem	40.00	20.00
47.	1 specimen bush plant, white	15.00	10.00
48.	1 specimen bush plant, pink	15.00	10.00
49.	1 specimen bush plant, yellow	15.00	10.00
50.	1 specimen bush plant, any other color......	15.00	10.00
51.	1 specimen standard plant, white, not less than 24 inch stem...	15.00	10.00
52.	1 specimen standard plant, pink, not less than 24 inch stem...	15.00	10.00
53.	1 specimen standard plant, yellow, not less than 24 inch stems...	15.00	10.00
54.	25 plants in var., grown to single stem and in pot to exceed 6 ins...	15.00	10.00
55.	12 plants in var., grown to single stem and in pots not to exceed 6 ins.	10.00	5.00
56.	6 plants of 1 var., grown to single stem, and in pots not to exceed 6 ins.	5.00	3.00

Special Prizes.

CHRYSANTHEMUM SOCIETY OF AMERICA PRIZE.

10 blooms of any one variety, C. S. A. Cup.

MASSACHUSETTS HORTICULTURAL SOCIETY'S PRIZES.

25 blooms of 25 varieties (open to members of Mass. Hort. Society only), $25.00, $15.00.

12 blooms of 12 varieties (open to members of Mass. Hort. Society only), $15.00, $10.00.

For the best vase of 25 blooms of any one variety, to be judged for all-round excellence of culture, in preference to any particular color, or popularity of any one variety (open to all), $25.00.

NEW YORK FLORISTS' CLUB PRIZES.

25 blooms in 5 varieties, 5 blooms of each, on stems not less than 24 inches long (open to members of that club only), $25.00, $15.00, $10.00.

TARRYTOWN HORTICULTURAL SOCIETY'S PRIZES.

(Open to members of that Society only.)

	1st.	2d.
25 blms. of 25 distinct vars..	$15.00	$10.00
12 blms. of 12 distinct vars..	10.00	5.00

Stems to be of uniform height of 15 inches. Competitors not allowed to compete in both classes.

MORRIS COUNTY GARDENERS AND FLORISTS' SOCIETY PRIZES.

(Open to members of that Society only.)

	1st.	2d.
25 blms. of 25 distinct vars..	$15.00	$10.00
12 blms. of 12 distinct vars..	10.00	5.00

Conditions for competition, same as for Tarrytown prizes.

MONMOUTH COUNTY HORTICULTURAL SOCIETY'S PRIZES.

(Open to members of that Society only.)

	1st.	2d.
25 blms. of 25 distinct vars..	$25.00	$10.00
12 blms. of 12 distinct vars..	10.00	5.00

Conditions for competition, same as for Tarrytown prizes.

TUXEDO HORTICULTURAL SOCIETY'S PRIZE.

(Open to members of that Society only.) 12 blooms of 12 distinct varieties, stems not less than 20 inches, no supports, $15.00, $10.00.

F. R. PIERSON, TARRYTOWN, N. Y., PRIZES.

For the best 25 blooms in 25 varieties shown in competition for the prizes offered by the various local Horticultural Societies, Silver Cup, value $50.00.

For the best 12 blooms in 12 varieties shown under the same conditions, Silver Cup, value $25.00.

E. G. HILL CO., RICHMOND, IND., PRIZES.

For the best 10 blooms of any seedling not in commerce, or foreign variety not disseminated in the United States prior to January 1, 1903 (open to all), $15.00, $10.00.

NATHAN SMITH & SON, ADRIAN, MICH., PRIZES.

For the best 10 blooms of any American seedling not yet disseminated (open to all), $15.00, $10.00.

JOHN N. MAY, SUMMIT, N. J., PRIZES.

For best 12 blooms in 12 varieties with 2-foot stems, artificial supports permitted where necessary, no restriction as to new or old varieties, $12.00, $8.00, $5.00.

PLATYCODON GRANDIFLORUM.

Grower, C. Craig, Montreal.

(See page 540, May 9 issue.)

English Horticultural Notes.

ROSES.—A new climbing tea rose was shown for the first time in London recently. The variety grows 6 feet to 7 feet tall, in true Crimson Rambler type, bearing pendent loose clusters of blooms of a soft rose-pink color, like those of Rosa indica, the common China rose. Those of Tea Rambler (for this is its name) are large and flattish. An award of merit was given to the introducers—Paul & Son, of Cheshunt, Herts. The dwarf form of Crimson Rambler noted by me on page 488 of the Florists' Exchange, which is named Madame Levavasseur, is being well spoken of generally on our side.

HARD-WOODED PLANTS.—I have nothing new to notice here, but would name a few favorites among a section of our English gardeners. As natives of warm, dry countries, the plants I notify should flourish well in the Middle and Southern States and may enjoy the Summer climate of New York, Connecticut, Pennsylvania, and Massachusetts. Tons of Erica Cavendishi, E. hyemalis, E. perspicua and its varieties, and E. gracilis, are grown in certain London and south of England market gardens for the plant trade in the larger cities. Another beautiful but less grown member is Erica propendens, a perfect gem when at its best. There are also Genetyllis fuchsioides, with crimson flowers; Leschenaultia biloba major, bright rich blue; Aphelexis humilis, Boronia heterophylla, and others, less useful decorative subjects. All of these are in the first rank of floral decorative quality. The tubular, elongated flowers of Erica perspicua (pink in color) were used as an edging rim for a lady's floral hat—a hat made of natural flowers—in a leading West End London shop recently. The hat was furnished with large pink roses above, and had Asparagus plumosus close laid in to the under side of the rim, a pink veil hanging down behind. Being tastefully and artfully finished off, the hat was the cynosure of an admiring crowd

ZONAL PELARGONIUMS.—These, commonly called geraniums, are specialized by Messrs. Cannell, of Swanley, and H. B. May, of Upper Edmonton. In the latter's group at a recent exhibition he staged the variety Lady Ilchester. The trusses are 4½ inches across, the individual flowers large and semi-double, and of a warm rose-pink, rather lighter than the color of Mrs Lawson carnation. It is an excellent grower. California is probably the best market variety he has. It is of an intense golden scarlet color, very brilliant, stands rain well when subjected to it, is semi-double, very free-flowering, robust and stout. Lastly, I may include Princess Charles of Denmark (King of Denmark type), a bright rich pink, with a white center.

CALLA, THE GODFREY.—English growers have not so far become generally acquainted with this very meritorious variety, and the same may possibly apply to Americans. It is distinctly dwarfer, more compact in growth, freer flowering, and has blooms of a purer whiteness than the common arum lily. It is intermediate between Calla Little Gem and Calla (or Richardia) æthiopica. Messrs. Clibran & Son, of Altrincham, have a nice stock of it.

A NEW STOCK.—One of the finest of our novelties staged in the R. H. S. exhibition hall on May 19 was Messrs. Bull & Son's (Chelsea) annual, double-flowering snow-white stock. It may sound strange to the mind of the florist to hear that the flowering stems are a yard long, and that the rosette crimpled white flowers are set apart on stalks of their own thinly on the spike, but no description can portray the beauty of this fine variety. I was assured that 70 per cent. of the seedlings come true doubles. For decorative uses it will be very valuable.

J. HARRISON DICK.

Raising Nephrolepis from Spores.

In answer to the query as to success in raising Nephrolepis exaltata from spores, I will say that, given the right conditions, it is quite easily raised. One must bear in mind that the species is arboreal, growing in moss, on trees and limbs. In the orchid houses of Mr. Oakes Ames, at North Easton, Mass., the plants are set in osmunda fiber, mixed with sphagnum moss. Spores from the adjoining fern-house alight on this and readily germinate. One of the predominant species is nephrolepis, which is quite a weed. Sporelings of this species can always be separated from plants raised from runners because the pinnæ are crisped and the margin bristly with the excurrent nerves. These characters disappear on maturity.—A. A. Eaton, Ames Botanical Laboratory, North Easton, Mass., in Fern Bulletin.

BELLEFONTAINE.—Our Decoration Day trade broke all previous records. Dark, cold, disagreeable, nasty weather prevailed, but we turned out the stock and are well pleased with the trade. POOLE & PURLLANT.

Wrought Iron Pipe

Read before the Florists' Club of Philadelphia by Walter H. Whetstone, of J. Whetstone & Co., June 2, 1903.

I am here to tell you what I know regarding the manufacture of wrought-iron pipe, and to answer those questions upon points that I do not touch.

The subject of pipe is a very exhaustive one, and I doubt whether I can cover the subject except in a very superficial manner, owing to the fact that the time is limited. Without referring to the good pipe of twenty-five years ago, I will, in brief, sketch out the process of manufacture of the two kinds of pipe made to-day, namely, iron and steel, and will attempt to show you that one is superior to the other, in other words, that iron is preferable to steel in the majority of its uses.

Considering the primordial cause of the pipe, we will take the ore which is principally Lake Superior ore, or Cuban ore, both of which are high-grade materials. This is put into a furnace and melted and poured into pigs, and called pig iron. These pigs are then put into a puddling furnace, which is a small pan-shaped affair, over which heat is played, and puddled entirely by hand into what we term "muck bar." The reason for puddling the pig iron is to rid it of its hardness by extracting the carbon from the iron and is performed by hand labor, simply stirring with a long poker the molten metal so that the oxygen of the air comes in contract with every particle of the boiling mass and extracts the carbon, forming a carbon dioxide.

When this is done, there is produced a more ductile substance called "wrought iron." It is a rough-looking material, yet is very much refined and is produced in slabs about 6 inches wide by ¾ inch thick, but varying in length. These slabs are piled one on top of the other and fastened together with a wire, and these are called billets; then they are put into the furnace again to be heated, preparatory to putting them through the sheet rolls. When they are heated to the proper welding point, they are put through rolls and made into sheets, and these sheets rolled to the exact width and thickness to correspond to the different sizes of pipe that the sheet is to be used in making.

Right here comes up a point as to distinguishing iron pipe from steel. It has been claimed by some that when pipe contains a blister, or seems to be made of successive rolls of iron, the pipe, because it is bad, is necessarily steel. The matter of pipe peeling off in layers is a conclusive test that the same is wrought iron, but the cause of it would be, that there has gotten between two successive layers some air which has not permitted the iron to weld at this point. From this point on iron and steel pipe go through the same stages before the finished product is produced, so we will consider now the manufacture of steel pipe up to this point.

By the Bessemer process, the pig, together with any steel scrap that the manufacturer may have, irregardless of its quality, is put into the Bessemer furnace and reduced to a molten mass. In the bottom of this furnace there are a number of small holes through which a blast of air is introduced for the purpose of ridding the entire mass of its carbonaceous properties. If the blast of air performed its function as well as the puddler we would have no cause for complaint against steel pipe, but the difficulty is that the air cannot touch every particle of the molten mass. We, therefore, when this mass is run into ingots, as we term it, rather than "muck bar," find that the ingots contain too much carbon, and this ingot is really a low grade of steel, containing probably from 1 to 2 per cent. carbon. A high grade steel contains about 4 per cent. of carbon, and when the steel contains this amount of carbon it will not weld at any heat. You will therefore see that a perfect weld can be made with a substance containing no carbon, and that the degree of welding is dependent entirely upon the amount of carbon the iron contains, so that at [illegible] per cent. carbon we have a perfect weld, and that anywhere from this point to [illegible] per cent. carbon we have an indifferent weld. This is the fault found with most grades of steel pipe—not that it will refuse to stand the pressure exerted against it, but that so frequently the slightest work attempted upon the pipe opens it up in its seams. To finish with the manufacture of steel pipe, this ingot is heated again and put through the rolls and made into sheets the same as in wrought iron.

I might say here that the process of puddling by hand to make wrought iron has never been improved upon—that is, no mechanical means have yet been invented to do the work of stirring that hand labor is now employed in doing. A great many inventors have tried to solve this problem, and the latest report that we have on the solution is, that a man is constructing a plant now in Pottstown to experiment with mechanical puddling devices, ad we trust the he in a short time will have solved the problem, because iron pipe is not doomed to last in this market very much longer, as most buyers to-day are looking for a cheap article, and price rather than quality is the thing that counts with the buyer. Just the other day I had a talk with a large manufacturer of wrought-iron pipe, with whom I have very close connection, and he told me that if they had to sell iron pipe for the price that steel pipe is quoted to-day they would have to go out of business inside of six months. It seems very strange, at the same time, that there are not more people willing to pay for a superior article of this kind, inasmuch as the best wrought-iron pipe only costs 10 per cent. more than what is termed a good steel pipe.

It has been said that iron pipe to conform anywhere near to the price of steel pipe is diluted with scrap iron. I do not know how all manufacturers make iron pipe, but I do know from personal observation that there is a mill with whose material I am very closely identified that uses nothing but Cuban ore in the manufacture of their pipe. The only scrap used is wrought-iron scrap that they make themselves by cutting off the ragged edge of a piece of pipe preparatory to its going to the machine for threading, and this entire quantity of scrap amounts only to between 3 and 7 per cent. of their output.

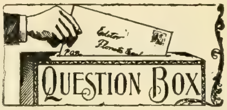
I have never had a close intimacy with a manufacturer of steel pipe, so do not claim that they either use scrap, but if they use a high-grade ore I would still contend, and rightfully so, that their finished product would not be as good as the iron product, on account of the amount of carbon it must contain.

The finishing process of iron and steel pipe is exactly the same. The skelp, or sheet, is piled into the furnace until it reaches a certain temperature, when it is drawn out and put through scarfing rolls. This is for the purpose of flattening the edges so that when they lap over in the rolls there will be more bearing surface for the lap weld. The scarfing rolls are nothing more than two concave solid wheels working in conjunction with each other, through which the sheet passes, and only having a bearing on the outer edges, flattening the same on one side. This furnace would be termed a welding furnace, and is used to manufacture pipe from 2 inches and larger. Smaller pipe than 2 inches is manufactured in the same way, but is put through what is termed a bell furnace; in other words, the pipe is drawn through a bell-shaped affair and the weld instead of being made by one side lapping over the other is made by contact of the two edges, termed belt weld. Here is where the steel manufacturers find their greatest difficulty, as it is difficult to get steel pipe to weld only by contact. Pipe after it leaves the scarfing rolls is again heated to a welding point and is then drawn through the rolls, between which is put and held in place a conical ball, over which the pipe passes, and the pressure exerted on the rolls presses the edges of the pipe together, forming a tight lap weld. This then is marketable pipe, except that it has rough edges in it, whieh have to be cut off and the length threaded, socketed, tested, marked and shipped.

This covers the manufacture of pipe as it is done to-day. And now to refer to its uses and the life of the two kinds. I can only say that those people who have had experience with both kinds of pipe both as regards the life of it and the ease in working it, prefer iron. Why is it that the manufacturers in nearly every case specify that the tubes in the boilers shall be charcoal iron, and not steel? It is for this reason: they know that while the steel tubes withstand the same pressure, yet for some reason that has not been discovered there is a chemical action takes place on the steel tubes that pits the tube full of pin holes, and this is done long before wrought-iron tubes are worn out.

It has often been proven that steel pipe only lasts three-quarters as long as iron pipe in oil-well works, but the reason that a great deal of steel pipe is used in oil fields is that so much of the oil field work is prospecting, and until a man strikes oil he is not willing to pipe the well with a material that will last longest.

I have attempted here to tell you something that you probably already know, and if there are any points that I have not covered, that I am informed upon, I will be glad to answer those questions put to me. My subject presupposes that I would touch upon the matter of air valves, but after giving the matter careful consideration I thought it advisable not to mix the two subjects, but would make a suggestion that if this talk has interested you at all and you feel that you would like to know my experience with air valves I would be glad to incorporate it in a separate paper.



Beetle for Name.

(116) I. M. B.—The beetle sent for identification is the grape flea-beetle—Haltica Chalybea. Spraying with Bordeaux mixture is recommended to destroy them on the vines.

Heating.

(120) I am about to build four greenhouses, each 100 feet long by 35 feet wide, all connecting with one boiler; shed the whole length of ends. I will use hot water for heating. The sides of houses are 6 feet, ridge 16 feet. Three houses are to be kept at a 55 and one at a 60-degree temperature with zero outside. I will use 2-inch pipe. What size pipe would be best to use from boiler to feed the 2-inch flows; also size to take return from 2-inch pipe return; and the best way to distribute the pipes, and how many for each house to maintain the above temperatures? The same boiler will be used to heat residence. Will it be all right to have the supply tank in the second story of dwelling, and where should the expansion tank of pipe be placed? I have seen them taken direct from main flow on boiler. Is this a good and practical way? There will be five 5-foot benches in each house.

C. B.

—In the rose house use 24 2-inch pipes, with one flow for two returns. For the carnation houses use 20 for the outside and 19 for the inside houses. These can be distributed on the walls and purlin posts, although if raised benches are used, a part of the returns can be underneath. A 50-horse-power boiler, or one that is rated for 9,000 to 10,000 square feet of radiation, should heat the dwelling and the greenhouses. The 2-inch flow pipes will be sufficient to feed the coils in each house used for carnations, but it will be better to use one size larger for the rose house. The expansion pipe can be connected either to the flow or the return pipes. The supply tank can be used as an expansion tank if desired. The tank should be fairly convenient to the piping, and slightly above its highest point.

L. R. TAFT.

Size of Tank.

(121) Our greenhouse is 16 feet wide, 126 feet long, 8½ feet to ridge. How large a tank is required (capacity in barrels) and at what elevation should tank be placed to water this house with one filling of tank?

AQUA.

—The question is a little vague, as it says nothing regarding the crop grown in the house, nor the kind of soil, and the style of benches that will be used. Under ordinary conditions a house such as is described will require from 10 to 12 barrels for a thorough watering. If the soil should happen to be very dry, and require a good soaking, nearly double the above quantity can often be used to advantage. If the bottom of the tank is elevated 10 or 12 feet, it will give a very satisfactory pressure for watering, although for syringing rather more than this will be desirable, even when the tank is full. Although the quantity of water named will answer for a single application, it would be unwise to erect a tank of the size. Nothing less than 50 barrels should be used, and 75-barrel capacity will be better, unless there is a large available water supply and a ready means of elevating the water.

L. R. TAFT.

Water Overflowing Tank.

(122) I would like to know why the water overflows my tank. I have a 3-inch pipe for flow overhead, which goes to a header and comes down on a slant with 2-inch pipe, and goes to header under bench on both sides, made of 2-inch pipe; four lines of 2-inch pipe on each side, and come out to boiler, with the 2-inch pipe. I have a 1-inch pipe that goes from the 2-inch return to a barrel which I have in place of a tank. The barrel is open at top, and the bottom of the barrel is a foot higher than the flow pipe. I heat by hot water. The only way I could make it work was to have the firebox smaller, and send the water out of the barrel. Do you think the boiler too large for the work?

G. S.

—Nothing is said regarding the relative amount of fire and radiating surfaces. When there is a small radiating surface and a relatively large fire surface, especially if the latter is so arranged as to expose a thin sheet of water for a relatively long time in contact with the fire, such a condition as is described is quite common. This is lessened by using larger pipes in the coil boiler, and at the same time reducing the length of the circuit that the water has to make in the boiler. It is also well to connect the highest part of the flow pipe with the expansion tank.

L. R. TAFT.

Alyssum for Winter Flowering

(123) What is the proper time to propagate sweet alyssum so as to plant it in the borders of the greenhouse for Winter blooming?

SOUTHERN FLORIST.

—Take the cuttings in the beginning of August and when rooted plant in the benches. If the benches are not ready at that time, grow the alyssum along in pots until such time as they are.

Chrysanthemums

(124) I am growing chrysanthemums in benches. I made my cuttings early and have them benched, but I think they are too large. Some of them are 15 inches tall. Would it be safe, or proper, to pinch them back; and would it make any difference with early kinds?

J. H. L.

—Pinching back the chrysanthemums at this time would not make much difference in their time of flowering, but it would induce more shoots, and consequently more flowers. If fine blooms are desired it will be best to let the plants go ahead without pinching. Fifteen inches high at this time is not a very tall height for the plants.

Detroit.

A Hail Storm.

A heavy hail storm struck Mt. Clemens, Mich., on the afternoon of May 27. The big plant of J. Breitmeyer's Sons was damaged to the extent of $1,000. Robert Klagge, near by, lost in proportion. Taylor and Carey seem to have escaped, as also did Gutchow's old place, now owned by A. L. Stevens. But the hardest hit was the retail establishment of Thos. Gordon in the city. He has a small range in connection with his store; not a whole pane of glass was left in it. No insurance.

DILGER.

OAKLAND. CAL.—The Alameda Horticultural Society was permanently organized at an enthusiastic meeting in Give's Hall May 22. A. D. Pryal was elected president, with an organization of sixty members.

Review of the Market

NEW YORK.—The June business in cut flowers has been very disappointing so far. Weddings and other social events that are continually occurring do not seem to bring much grist to the florists, and a genuine dull time is being experienced by both wholesale and retail dealers. Memorial Day trade was hardly equal to that of an ordinary Sunday in the wholesale quarters, and all the houses closed at noon on that day.

Supplies of all flowers are much in excess of the demand, excepting white sweet peas. These are scarce, and, of course, they are sought quite eagerly. It is feared that if we do not have some rain in the very near future, outdoor sweet peas will be an utter failure this season.

Peonies are coming in abundantly, but there is not the business doing to use them up fast enough; $3.00 per 100 is a common asking price for most of them, though a dozen or two of fine large white peonies do occasionaly sell at 5c. each. The rose supply does not abate any, and prices are discouraging to both dealer and grower. American Beauty are, if anything, more plentiful than for some weeks past, and the quoted prices are the exception and not the rule. The demand is so poor that the flowers accumulate from day to day and thereby diminish in value. Lily of the valley is almost a drug in the market and, although $3.00 per 100 is asked for some special grade stock, there are plenty of good grade flowers offered at $1.50 per 100, and do not sell readily at that.

There is not much choice between the fancy and the ordinary carnations just now; they all seem to be of one grade almost; and if one wants them in quantity he may take his pick at $1.00 per 100. Southern-grown gardenias are very much in evidence and sell slowly at 25c. a bunch. Gladiolus are more plentiful and the best of them are held at 75c. a dozen. Lilies are bringing from $2.00 to $4.00 per 100 only and move very slow. There is a limited supply of indoor grown centaureas and gaillardias, and stocks and antirrhinum are very plentiful, with little call for any of them. The prices on smilax, asparagus and adiantum remain practically the same as last quoted. There are some hopes that business will take a decided turn for the better before July comes; we hope so, at least.

PHILADELPHIA.—There has been a large amount of business done this week, and a greater demand for stock than is usual at this time of year. The chief call was for roses, sweet peas and lily of the valley, and on these three things growers had to make extra trips and commission men send for extra consignments to keep the stores going. But withal, there has been any quantity of stock to be had, and prices remained easy all week.

Carnations have been but little in demand as compared with other flowers. Nearly all of the wholesale houses have done a good shipping business, but orders ran for pink and white roses, lily of the valley and sweet peas, and but few carnations. Smilax has also been in strong demand, with but scant supply; small strings were readily sold at 15c.

Late Wednesday afternoon short stem American Beauty roses and white roses were getting scarce, with orders still coming in to the retail stores.

DAVID RUST.

BOSTON.—The Memorial Day trade this year was very heavy indeed. The market, though not so glutted with outside flowers, such as lilac, snowball, deutzia, etc., was well stocked to meet all demands, but at the close of business Saturday everything had been sold. The absence of much of the outdoor stock, usually so plentiful at this time, occasioned a very good market for flowers grown under glass, and as a result good prices were obtained.

In roses, the smaller grades were most in demand and made good prices. American Beauty, shorts, realized $4.00 to $6.00; seconds, $8.00 to $10.00, No. 1, $12.00 to $16.00, and extras, $20.00 to $25.00. For the smaller grades of Bride, Bridesmaid, Kaiserin Augusta Victoria, Souvenir du President Carnot, Liberty, Meteor, etc., $2.50 to $3.00 per 100 was realized, and nearly everything cleaned up. The better grades of the white and pink roses went to $10.00, with a few select Kaiserin at $12.00, while the red ones reached $8.00 for the best grades.

Carnations were very plentiful, and included an enormous supply of "salted" stock, which went hard. Good carnations made $2.50 to $3.00, with fancies at $4.00, except white, which were freely offered at $20.00 per 1000. Much of the inferior stock was sold at $1.50, or carried over.

Stocks were in enormous supply, but cleaned up very well at $2.00 to $4.00 per 100. Spiræa was very plentiful, too, but much of it was of inferior quality. The better stock made $2.50 per 100 and sold out clean. Candytuft and feverfew were not nearly so plentiful as usual and were in good demand.

Peonies were not abundant and sold readily at $4.00 to $8.00 per 100. Rhododendrons were at their best. Sweet peas were in good supply, and cleaned up very well at 50c. and 75c. per 100. Lily of the valley, from both frames and under glass, was very plentiful and good, selling fairly well at $1.50 to $3.00 per 100.

The business in greens, including hardy ferns, galax, laurel and wreaths, moss, etc., was enormous; and the supply dealers report a satisfactory trade in dried flowers and other supplies.

This week business has again fallen away, and prices are considerably lower and going down. Stock is not quite so plentiful, as many of the growers are so busy at home that they do not bother to come in with small lots, which fetch only small prices. With the exception of sweet peas everything is in sufficient supply to meet the light demand. Roses make $1.50 to $6.00 for Bride, Bridesmaid, Meteor, etc. Kaiserin go to $8.00 and American Beauty as high as $25.00. With the exception of Kaiserin, roses are pretty well played out.

Carnations average from $1.00 to $1.50 per 100, with fancies at $2.00 and $2.50. Sweet peas make 50c. to 75c. and clean up readily. Frame lily of the valley continues in good supply at $1.50 and $2.00.

F. J. N.

CHICAGO.—The market the past week has improved. Shipping trade was excellent the latter part of the week, and Memorial Day business up to the average of former years. Prices were much better than ever before realized at this time of the year, although roses of almost all grades were not up to the average in quality, especially the teas. Some extra Liberty were received, and sold well. The growers of this rose have found it a very profitable one for some time past. American Beauty was not up to the standard and much sorting had to be done in selecting the flowers suitable for the shipping trade. Prices on this rose were $2.50 to $3.00 per dozen for the best grades; others realized $4.00 per 100 to $2.00 per dozen. Bride and Bridesmaid are bringing from $5.00 to $6.00 for fancy stock; other grades, $1.50 to $4.00 per 100. Mme. Abel Chatenay, Sunrise and Liberty, of good quality, bring $6.00 to $20.00 per 100, the latter figure for extra fancy stock, with over three-foot stems and fine heads.

The supply of carnations is equal to the demand; prices are better than for the same period of last year. Some extra fine white and Mrs. Lawson sold as high as $4.00 per 100 the beginning of this week, but the bulk of the stock is disposed of at from $1.50 to $3.00 per 100 few sales going below that figure.

Sweet peas are increasing in quantity; the price is now from 50c. to $1.50 per 100. Callas and Harrisii lilies are seen in good shape, and sell well at from $8.00 to $15.00 per 100. Peonies are arriving from local growers, and the quality appears to be a great deal better than that of the flowers shipped from the South. Some extra fine pink and white sorts have sold at from 50c. to $1.00 per dozen. Fresh ferns are arriving from Michigan, selling readily at $3.00 per 1000. Asparagus brings from 35c. to 50c. per string; A. Sprengeri, from $2.00 to $5.00 per 100; smilax, $10.00 to $15.00 per 100.

R. J.

ST. LOUIS.—Decoration Day business in this city last Saturday was much better than the retailers expected. At the wholesale houses stock was very scarce; not nearly enough was in to fill orders which were placed with the wholesalers early in the week. Cheap outdoor flowers were in plenty, but these were mostly handled by the market gardeners, who claim they did a rushing business in that stock. Plants of all kinds also sold well.

The florists doing business near the large cemeteries also report a big trade in bouquets, design work, cut flowers and plants.

The prices on stock were advanced a little. This was also an unexpected turn of affairs for the retailer who has been used to buying at cheap figures for some time back. Choice roses were scarce at $6.00 and $8.00 per 100; a great deal of short open roses came in which were hardly salable for store trade. They brought $2.00 and $3.00 per 100. Some of the stock in roses is badly mildewed. American Beauty are getting smaller, and not nearly as many are coming in; the best of them are selling from $3.00 to $4.00 per dozen.

Carnations, which have been such a glut of late, shortened up in supply just at the time when they were badly needed. A great many of our shippers no doubt had use for the flowers for home trade. Carnations of all sorts are still in good color, but are becoming small. $2.00 to $2.50 was the price for the best. Others, hardly worth the price, brought $1.50 and $2.00. To-day (Monday) the supply is somewhat larger and values are again down to $1.00 and $2.00 for the best.

Sweet peas were in fine supply, but the demand for them was so great that none were left over. They brought 75c. for the best by the hundred, 50c. and 60c. in thousand lots. The lighter shades had the best call.

Cape jasmines are in big supply, and the street men are selling them at three for 5c.; 60c. per 100 was the best price at the commission houses last week.

Peonies were not over-plentiful, and are about over in this section. Fancy ferns are still very scarce with the wholesale men, but plenty of [illegible] now, selling at 1[illegible] and 15c. per [illegible].

ST. P.

PITTSBURG.—Trade conditions are fairly satisfactory. In the cut flower line the past week, funeral work created a good demand for stock; otherwise not much was doing. The month of June will likely be good for trade. Stock of all sorts is very abundant and prices low. Roses are sold at from 50c. per dozen up, and carnations at from [illegible] up, and by street vendors for less than that. Peonies brought good prices from 5c. to 6c. wholesale, and from $1.00 to $1.50 per dozen at retail.

Trade for Decoration Day was brisk, but there was plenty of stock, and prices were very reasonable.

The bedding plant trade, which is about over, was better this season than for some years back. Not many more plants were sold than usual, but the prices realized were better. Geraniums took the lead, selling at from $1.00 to about $2.00 per dozen at retail in 4-inch pots. Good plants went very readily at $2.00 per dozen, and better, if in bloom, single plants at 25c. Cannas were in good demand; many more of these were grown this year than last, and there are plenty to be had yet. Four-inch pot plants brought $1.00 per dozen. Caladiums fetched from $1.00 per dozen up. Salvias and blooming vincas were in good demand, and this stock is scarce. Moonvines still lead as climbing plants. Pilogyne also sells well, but cobæas have lost their hold on the people, and not many are grown. Coleus and alternanthera were not in great demand, but they generally sell well after June 1. Among the hardy stocks sold, roses, rhododendrons, azaleas, and a few others were most called for.

E. C. R.

INDIANAPOLIS, IND.—More than the usual quantity of flowers would have been sold Decoration Day had not a storm ruined the better part of Friday's business. Customers, as a rule, were more willing to pay for grave bouquets and flowers than in previous years. As it was, business was quite equal to that of last year. Stock of all kinds, good peonies excepted, was equal to the demand. The call for roses was heavier than expected Decoration Day. Bridesmaid and Bride were practically out of the market and quite a bit of complaint was heard from patrons accustomed to stock of Winter quality. The best Bridesmaid, Bride, Meteor, and Sunrise retailed at $1.50 to $2.00 per dozen. Liberty were scarce and few of them were used because of the high price asked, namely, $2.00 to $4.00 per dozen. American Beauty, as usual, moved slowly Decoration Day; $2.00 to $6.00 per dozen was the prevailing price for them.

Carnations are small and unsatisfactory; 60c. per dozen is the customary price, but 75c. to $1.00 is easily obtained when good stock is to be had. A large quantity of Harrisii lilies helped out wonderfully the making of bouquets on Friday; $3.00 per dozen retail, and $1.50, wholesale, was the prevailing price.

Customary Decoration Day flowers, such as Ten-weeks stock, candytuft, campanula, feverfew, syringa, and sweet alyssum, were disposed of in large quantities.

The commission houses are well stocked with Cape jessamines. Grocers who offer them at 20c. per dozen are the principal dealers.

Peonies were not as plentiful on the 30th as last year, but the call for them was not nearly as great, so they were not sorely missed. Those to be had were disposed of at $1.50, retail, and 75c. per dozen, wholesale. Spanish iris are about the only odd flowers on the market, and sell readily at 35c. per dozen.

I. B.

BUFFALO.—The importance of Decoration Day seems somewhat on the wane in this city. The craft in general seemed to expect modestly, so anticipations were usually realized, several dealers mentioning a trade increased over last year. Outdoor blooms, as regards quantity, were behind the average, so finer flowers went well, the supply being cleaned up by Saturday night. Stock is better in quality this week, improved apparently by the recent cooler weather. Some very good Kaiserin Augusta Victoria from new crops nicely fill a need. With bedding also taking active attention now, the plantsmen can boast about business.

VIDI.

OMAHA, NEB.—The three days previous to Decoration Day were record breakers in Omaha, created by school commencements and holiday orders. The principal colors sought were red and white. Decoration Day trade itself was a fizzle, because of rain.

It is feared the Spring planting will suffer considerably on account of the cold weather.

J. H. B.

ROCHESTER, N. Y.—Reports from the retail florists on the Memorial Day trade [illegible] very encouraging. Although the [illegible] period [illegible] very dry, considerable demand was noticed in the bedding stock [illegible]. But the general retail business [illegible] at a standstill owing to lack of rain, the plants being stunted and bloom [illegible]. This [illegible] affects the income of quite a few of our smaller growers who depend considerably for their income on planting hardy borders, etc. Shrubbery is moving slowly for the same reason.

Carnation field stock are in many cases still in flats in cold frames, one grower thinking seriously of potting all of his plants in pots suitable to plant and carry them so until Fall. Those plants which were set out early in drier land are showing the effects of strong winds and drouth, also from being cut by sand.

The Memorial Day parade here was about as usual, the fine day being responsible for a large turnout. The florist, of course, was very much in evidence on the flower wagons, but oh! said the sight. Who grew such plants? Where did they come from? Lying every which way in the traps, with blooms having broken necks, unmountable plants with about two top leaves, reminding one of a miniature cocoanut tree, leaves in all shades of yellow and the soil so hard and dry that the ball of earth could be used as a baseball. After all the pains the hard-working florist gives to each plant, striving in every way to get individual specimens, yet withal to be so roughly handled that when they reach their destination and perform their share toward humanity's cause, shall we say that the soldier's grave is decorated? Perhaps there is no real remedy for this, especially where a custom loving public is concerned, except, maybe, individual effort on the part of the purchaser to see that plants are in fit condition to be left alone for a day or so.

A. H. SECKER.

SYRACUSE, N. Y.—Favored with a bright, but cool day, Memorial Day trade was very good indeed, quite up to the average. More plants were sold than usual, owing to the almost total absence of outdoor stock and the severe frost the first of May completely ruined the lilacs, snowballs, etc., and for more than a week we have had heavy gales daily that have whipped everything to pieces. Carnations sold well and brought from 75c. to $1.25 per dozen; roses, $1.00 to $2.50 per dozen. Many took pot plants instead of cut flowers, owing to the prices charged.

The drouth continues, and the outlook for everyone is very serious indeed. There has been no rain to speak of since April 5, with excessive hot weather and parching winds.

H. Y.

PROVIDENCE, R. I.—We are used to expecting greater demands each year at holiday times, and this season doubtless surpassed last Memorial Day receipts with everybody. The demand for all stock was met by the fullest receipts of carnations and roses, the former bringing $1.50 for average to fine grade, with a special price of $2.00 to $2.50 for extra. Plenty of ordinary stock failed to fetch over $1.00 per 100. Roses sold at $2.00 and $3.00 per 100 for medium-stemmed stock, with other prices for better grades according to the needs of grower and buyer. Gillyflower was the only extra item on the market, and sold at $2.00 to $3.00 when of extra grade. Ferns were just about sufficient for needs, with hardy ferns of better quality than fancy. There was plenty of smilax and asparagus from out-of-town. The weather was excellent, and helped to boom business till late Saturday afternoon.

C. S. M.

MILWAUKEE, WIS.—Decoration Day trade was a record breaker. The demand for carnations was unprecedented, although everything else was also cleaned up. The weather turned cold just at the time when warm weather was wanted, therefore the supply was cut off considerably. There were plenty of lily of the valley, lilac and late tulips in the market, also of longiflorum lilies, which sold well. Cape jasmines arrived on the 30th, too late for shipping trade. This was due to the cool weather in the South during April.

We have had very heavy and almost daily thunder showers the past week, delaying outdoor planting.

C. C. P.

DETROIT, MICH.—June business opened up well. Decoration Day cleaned up all stock satisfactorily. Prices on carnations have advanced a notch or two again. We had a heavy glut for two weeks previous; carnations have sold as low as $7.50 per 1000. The outlook for this month is very promising. Peonies are selling quite well; pink sorts have the greatest call. American Beauty roses are much sought after. Shipping to all points is brisk; and local trade is up to the standard.

DILGER.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.
WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. A Bulletin on Fertilizers.

The Vermont Experiment Station has just issued Bulletin 99, an 88-page publication, concerning commercial fertilizers. It is the most complete bulletin of its kind thus far issued in Vermont, and is one of the most comprehensive publications on this subject that has been printed in the East. It not only gives a review of the trade of the year, but discusses the nature and use of fertilizers and gives suggestions as to choice, etc. The bulletin is well indexed and contains a dictionary of the terms used in fertilization. This is the first of a series of bulletins in which it is expected to discuss the whole subject of fertilizers and fertilization from A to Z. It may be had for the asking. Those desiring to receive future issues without further notice should ask to have their name placed on the mailing list. A postal card addressed to the Experiment Station, Burlington, Vt., is sufficient.

The Week's News.

Much uneasiness is felt by growers in this section over the lack of rain this season. There has been no downfall worth mentioning for about two months and carnations as well as all other crops are suffering badly.

Chairman F. H. Traendly, of the club's outing committee, is receiving many applications for tickets to the annual outing, which is to take place on Wednesday, July 1. All indications point to a large gathering on that date. Those who intend going, and who have not yet secured their tickets, should do so at the earliest moment. There is a limit to the capacity of the dining-room at Witzel's Point Grove, and it would be unfortunate for anyone to apply for tickets too late to be accommodated.

Professor Charles S. Sargent and his son, A. R. Sargent, with John Muir, the naturalist, sailed on the Celtic on May 29 for a trip around the world, the object being to collect botanical specimens for the Arnold Arboretum of Harvard University. The trio's efforts will be especially directed toward the flora of Europe and Northern Asia. They will go to St. Petersburg and Moscow, then over the Trans-Siberian railroad to Pekin. Java and Hong Kong will be visited, and the route home will be via San Francisco. Specimens collected will be shipped home as soon as obtained, whenever possible to do so.

The wholesale plant trade in this city for Memorial Day was exceptionally good. The market at Clinton street was thronged with buyers and growers from 12 o'clock midnight until 5 o'clock a.m., and some of the Jersey growers made two extra trips to their greenhouses during the night, stock selling out so well. The principal buyers at this mart are usually the men who, with their horses and wagons, peddle the flowering plants through the streets of the city. On Friday morning, however, we saw the wagons of some of the leading retail stores of the city loaded with plants obtained at the market. Some of the storekeepers were evidently buying stock in large quantities.

Small-sized plants are the best sellers usually, and prices realized are about as follows: Geraniums, 80c. to $1.00 per dozen; petunias, single, 60c.; double, $1.00; anthemis, 60c. to 75c.; heliotrope, $1.00; mignonette, 75c.; fuchsias, 75c. to $1.25; the latter were 5-inch pot stock; herbaceous calceolarias, $1.00 per dozen; nasturtiums, 50c. Hydrangeas probably met the slowest demand of any and $4.00 per dozen was asked for large plants.

W. C. Krick, Broadway, Brooklyn, is just back from Atlantic City, where he has been spending a few days in recreation. Krick's Letters have gained a world-wide reputation, as is evidenced by a diploma and gold medal that has lately arrived from Rome, Italy. At the exposition held in the Eternal City late in the year 1902, Mr. Krick exhibited some of his letters and immortelle designs, and the awards given at that time have but recently come to hand. The gold medal is about 2½ inches in diameter, the inscription on one side reads: "Roma Esposizione Campionaria Internazionale," and on the reverse is a bust of the King, with the inscription, Vittoria Emmanuele III. R. D. Italia. Mr. Krick, with hi wife and children, will go to the Catskill Mountains the latter part of thi month.

The June meeting of the New Yor Florists' Club will be held on Mon day evening next, June 8, in the clu room, Grand Opera House building corner Twenty-third street and Eight avenue. This is peony night, and it i expected that an exhibition of thes flowers will be on hand. Beaulieu ha given notice that he will make an ex hibit of pansies; and the outing com mittee will exhibit programs of the fa mous event that they have schedule to take place at Witzel's Point Vie Grove on Wednesday, July 1. Conven tion matters will also be discussed an the traveling route to Milwaukee de cided. These interesting topics shoul bring out every member, particularl also, as this will probably be the las meeting of the club until the mont of September.

J. Thumann is seeking a buyer fo his greenhouses, located at Union Hil Jersey City. For the last seven year the houses have been operated by Schoelzel. All told, there is about 35,000 square feet of glass, and the clos proximinity to New York makes th place a very advantageous one for th cultivation of either flowers or decora tive plants.

The New York Cut Flower Co. an Moore, Hentz & Nash, commence June 1 to close their places of busines at 3 p.m. daily.

W. E. Marshall, who for the pa several years has been in the emplo of Weeber & Don, seedsmen, has go into business on his own account 41 West Twenty-fourth street, whe he will deal in seeds, plants, bulbs an horticultural sundries.

J. J. Van Waveren, of L. Van Wa eren & Co., Hillegom, Holland, salle June 3, after a successful tour of th United States.

J. A. Evans, Richmond, Ind., was town this week. Large ventilating o ders denote considerable building th season throughout the country, he say

Box 102, COLUMBUS, O.

Mention the Florists' Exchange when writing.

CINCINNATI, O. Stock in this mark is now scarce, and prices have advanc considerably. Roses have deteriorat in quality. American Beauty, first qua ity, long stems, bring 25c. each; Bride a Bridesmaid, 2c. to 6c.; Golden Gate, 2 to 6c.; Liberty, 2c. to 4c.; short Amer can Beauty, 3c. to 5c.; medium, 8c. 10c.; 2-inch, $1.50 per dozen. Lily of th valley, 4c.; stocks, 3c.; sweet peas, 25 to 50c. per 100; coreopsis, 75c. to $1.00 p 100; fancy Western ferns, $1.25 per 1,00 adiantum, $1.50 per 100; smilax, 15c. p string. The demand is very brisk a stock is moving rapidly.

KALAMAZOO, MICH.—Trade for De oration Day kept well up to the averag of past years, although no great increa was noted. Plenty of stock was to had and most of it cleaned out at th usual prices. Roses, $1.00 to $1.50 p dozen; carnations, 50c. to 75c. per doze for good fair flowers. Some small an poorer flowers sold for less. Outdo stock was in some demand, and thos who had it cleaned out at satisfacto prices.

S. B.

CHANGES IN BUSINESS.

NATICK, MASS.—N. A. Hudson ha purchased the violet business of Willia Glidden on Park street.

SHENANDOAH, PA.—Payne, the flo ist, has opened a store in the Burns Buil ing, North Main street.

MONTECITO, CAL.—John F. Horsle formerly of Ontario, Cal., Burnett, Cal and Long Beach, Cal., is now locate here. He is still in the florist busines but not on his own account.

PORTO ALEYNE, RIO GRANDE D SUL, BRAZIL.—Schoenwald & Dentrich importers and exporters of plants an horticultural supplies, formerly doin business as the "Compantion Horticola at Santa Cruz, are now located here.

SUMMIT, N. J.—Emerson C. McFad den, of Short Hills, N. J., has purchase from Gates Bros., Summit, the larg greenhouse establishment known as t Kent Place Nurseries. The place consis of about nine acres of land and abo 100,000 square feet of glass, which w be devoted to roses, carnations, Adiantu Farleyense, and other ferns, etc. A Short Hills Mr. McFadden will devo his entire plant of 20 houses to cut de orative stock, his leader being Aspara gus plumosus nanus.

Club Meeting.

The Florists' Club held its regular meeting last week, when the subject of roses and hardy blooms was discussed. The convention of the Society of American Florists, to be held in Milwaukee in August, was talked about, and rates varying from about $16.00 to $18.00 for the round trip have been received, but better can perhaps be done if a sufficient number go. The president appointed a committee on transportation—E. C. Reineman and E. C. Ludwig—to report at next meeting in July. The annual outing of the club was also brought up and a committee of five, as follows, E. C. Ludwig, J. W. Ludwig, Wm. Lauch, John Bader and E. C. Reineman, was appointed to make all necessary arrangements.

E. C. REINEMAN.

Louisville, Ky.

The building of a new large hotel will cause quite a few changes in the location of several of the local florists' stores. The store occupied for the past ten years by Jacob Schulz is on ground to be occupied by this hotel. Mr. Schulz buys the ground on which the store of F. Walker & Co. is situated, and he intends putting up a modern florist store and show conservatory. Under the circumstances, F. Walker & Co. were compelled to look for a new location, and it is rumored that they will purchase ground adjoining that bought by Mr. Schulz. As Mr. Schulz paid $1,000 per foot for his and F. Walker & Co. the same amount, or a little more, it will be seen how valuable this ground is. These movements will all be made during the Summer, as the two firms have been notified to vacate in thirty days.

There are rumors of other changes, but I have not been able to verify them.

A. R. B.

Providence, R. I.

News Notes.

Many florists found it an all-night task to keep up with Decoration Day orders.

J. Wood sustained an ugly cut of the thumb, which hampered his Memorial Day work.

Miss Burlando has finished her employment with Johnston Bros., and it is probable that George Johnston will once more take up active business at the old stand after an illness of many months.

Business for Memorial Day aggregated more than last year, and in some instances was almost double.

Both Louis' has separated from J. Wood and are open for engagements.

Things are very quiet just now, and you can buy stock at your own price.

Remember the chowder party at the florists' club on Thursday, June 11.

News Jottings.

During the past week the weather has been rather erratic. The rains that have fallen were much needed in some parts, and carnation stock in the fields has been greatly benefited. For a time it seemed as if it was going to be a very dry Summer. If the drouth had continued stock of all kinds would have suffered, especially carnations. As it was, the hardy herbaceous and flowering shrubs were damaged to some extent, and the blooming season shortened.

The wholesalers report trade up to the average for Decoration Day. Shipping was extra heavy. There has been some complaint about the keeping qualities of cold storage peonies. When the blooms left the commission houses they seemed to be in first-class condition, but when received and exposed to the air they went to pieces. It may have been that the flowers were slightly damaged before cutting by the late frosts that passed through the neighborhood where they came from, as in former years no complaints were heard as to their keeping qualities. Home-grown stock is coming in in excellent condition and selling well, being about a week earlier than last year.

Decoration Day plant trade was not up to that of former years, due to the inclement weather. Prices were a trifle higher.

The Garfield Park Floral Co. had some fine grown 4-inch campanulas in bloom for Decoration Day trade, but find them not very satisfactory plants to handle, as it is almost impossible to ship them without bruising the flowers. Nor can they be cut and sold as cut flowers at any profit.

Wietor Bros.' cut of carnations for the last three days of last week was 96,000 and the flowers were all sold at the end of each day. The firm's roses are extra fine. N. J. Wietor is suffering from a severe wound in the thumb.

Peter Reinberg is cutting some very good Mme. Abel Chatenay roses; stems average 42 inches. His new American Beauty range is finished and he has started to plant.

Plant trade at Vaughan's Seed Store is better this season than in former years.

F. R. Hills is receiving some finely grown carnations from B. Eldridge, of Belvidere; his Eldridge B. is especially fine now.

Rose thorn poisoning is beginning to make its annual appearance among the trade. Leonard Kill is suffering from a severe case at present.

Sinner Bros. are sending to the market some of the finest carnations received here. This firm is well satisfied with their change from shipping to selling their own stock.

The George Wittbold Co. are sending in some 5-inch Boston ferns of good quality, and find a ready sale for them at good prices.

A movement was inaugurated at the last meeting of the Florists' Club to try to increase the membership. The trustees were instructed to endeavor to find a hall, with bowling alleys connected. A committee on entertainment, composed of J. C. Vaughan, W. N. Rudd and P. J. Hauswirth, was appointed with power to appoint subcommittees if necessary.

Retail cut flower trade was very good for Decoration Day, but has fallen off considerably since.

ROBERT JOHNSTONE.

Cincinnati.

emorial Day Trade.

Memorial Day trade far exceeded ny we have ever before experienced, nd we could have sold more goods if hey had been available. Prices were ll right for the time of year and the uality of the stock. The stores were ll very busy, and everybody is well leased. This week the scene changes ntirely. Commencement exercises and liberal number of weddings are takng up the attention of the stores, conequently we wholesale men are kept ustling trying to get stock to fill the rders.

reatment of Commission Men by Some Growers.

Some of the growers, who do a etail as well as wholesale business, ell their stock at home when it is carce and we need it—and save the ommission. Then, when we are loadd, they are only too glad to forward to the commission man. They do ot take into consideration that the ommission man has customers who uy his stock all throughout the seaon, and, when the various holidays ome, want the stock badly, but get vhat the little boy shot at. I do not ay that all growers do this, for some f them appreciate the position the ommission man is in, and try to diide at least—which is the only square ay to do.

ottings.

C. E. Critchell, of Atlanta, Ga., as returned after a short visit to his nany friends in this city. He was not narried, as was reported. He is at he head of one of the best establishnents in Atlanta.

Gustave Adrian's mother died last veek, at the residence of her son.

E. G. GILLETT.

Indianapolis, Ind.

ews of the Week.

Bertermann Bros. have incorpoated their business with a capital tock of $30,000. The stock, which is omposed of $10,000 preferred and $20,00 common, is retained by them. The irectors are John, Edward, Walter, rwin, and Herbert Bertermann. The fficers are: John Bertermann, presient; Walter Bertermann, vice-president; Irwin Bertermann, secretary and reasurer; and Edward Bertermann, nanager.

Indianapolis florists have been enoying a prosperous bedding season. Vhile some smaller florists have been ontracting for work at a very low nargin, nearly every one has been able o dispose of his bedding plants at a ood figure.

Messrs. Pahud, Nelson, and Braeudlu the cemetery florists, report the eaviest business in years in their line.

A great amount of planting has been one in the city parks this season, and Ir. Standley, the superintendent, deerves credit for the character of work n this section.

A heavy hail storm visited this secion Wednesday afternoon, May 27. everal of the florists had glass brokn, but not in large enough quantities o do serious damage.

The State Florists' Association of Iniana held its monthly meeting Tuesay evening, June 2, at the Commerial club rooms. No special program as outlined.

Alvin Schriber, foreman at Berterann Bros. Company, has been buying al estate, with a view to building in e near future.

Jacob Forest, of Greenfield, Ind., vised the several Indianapolis florists st week.

Harry Balsley, of Detroit, visited our ty this week. He proudly displays an lderman's badge as a reminder that ower pots have not driven him out of litics yet.

I. B.

St. Louis.

ottings.

A very important meeting of the . Louis Florists' Club will be held xt Thursday afternoon at 2 o'clock. resident Dunford is making a special fort to have a large attendance, as me matters of interest will come up. he trustees will make known the ace where the picnic will be held next onth. Vice-President Windler will ad his essay, as will Mr. Fillmore. rowers should not fail to bring a few veet peas for exhibition.

Edward Burchel, of the Reissen Flor Co., has charge of the floral department of the National Sangerfest, which is to be held this month at the World's Fair grounds. Mr. Burchel says a great many flowers will be used that week, commencing the 15th inst.

Theo. Miller expects to lead the life of a bachelor this Summer, as his wife and daughter will make a trip to Europe, starting next Thursday. Mr. Miller's daughter has been sick for some time, and should greatly benefit by this trip, which is mostly made for her health.

Next Sunday will be the first open Sunday this year at Shaw's Garden. The garden is in excellent shape for the visitors, and should the weather be fine, all records will be broken as to attendance. These open Sundays are becoming very popular with the public of St. Louis, who cannot find time to visit the garden on week days. The local florists are always received very kindly on those days by the boys out at the garden, as well as by Professors Trelease and Irish, who are both members of our club.

ST. P.

Denver.

A New Club Organized.

At a meeting held at the City Park Conservatories May 12 the Colorado Society of Floriculturists was organized, electing the following officers: John Salterthwaite, president; Frank F. Crump, of Colorado Springs, and Mrs. E. B. Davis, of Fort Collins, vice-presidents; Mrs. J. M. Johnson, of Boulder, treasurer, and J. A. Valentine, of Denver, secretary. A. J. Graham and J. A. Valentine were appointed a committee to act with the State Board of Horticulture to secure funds for the flower show, which will be held at the time of the fair at Pueblo in September. The State has allowed $500.00 for premiums. A schedule committee, consisting of F. F. Crump, A. E. Mauff and J. A. Valentine, was also appointed.

News Notes.

We were favored a couple of weeks ago by a call from Mr. and Mrs. E. G. Hill, of Richmond, Ind., en route for the Far West. Their stay here only lasted two days, one day being spent at Ward in company with Mr. Valentine, and the other in seeing the town. Unfortunately, the trip was cut short owing to a severe sand storm, so only a few of the places were visited.

We are having a very backward Spring and stock out-of-doors is making little progress. We have had several frosts since May 1, and the atmosphere generally is cold. Outdoor material will be scarce for Memorial Day. Lilacs were about knocked out by the frost, and snowballs, etc., are too backward.

P. S.

Kalamazoo, Mich.

Jottings About Town.

Bedding plant trade has shown some increase this season and most stocks are lower than is usually the case at this time. The weather for several weeks was most favorable for early planting, and at the present writing (June 1) much of it is done. The carnations in the field suffered somewhat from drouth early in the season, but the recent steady rains have placed them on a good growing basis, and they are now most promising. There is lots of hustling now being done to get roses replanted, and most of our growers are busy with all the men they can get hold of attending cleaning out of houses, etc.

The labor supply here, as elsewhere, makes itself seriously felt, common labor being both scarce and high-priced. Eventually this question will have to be faced by our growers and prices for our products graded according to cost of production.

Both the Central Michigan Nursery Co. and Van Bochove & Bro. are pushing the construction of their new houses as fast as possible, the material and workmanship of both being the most excellent kinds obtainable.

"THRIPSCIDE"

(REGISTERED)

GREENHOUSE FUMIGATING POWDER

is the newest and best article on the market to-day for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:

1 lb. Tin Can ...	**$0.25**	25 lb. Sealed Box	**$4.50**
5 " " ...	**1.00**	100 " " "	**16.50**

Send for copy of testimonials. For reference we refer to Messrs. Bassett & Washburn, Hinsdale, Ill.

Separating Greenhouse Pipes.

This is no soft snap for the man who has such a job in hand. It would be well to break the pipe to separate it from its position in the greenhouse. Then, by placing one of the hubs or joints over a trestle, barrel, or any other article that will bear the weight, the pipes can be worked up and down, the same as joints of stovepipe, until they come apart. The work may be made somewhat easier by the application of kerosene to the various joints, but the task is one of labor, and if the man who is employed upon it should claim that it is a labor of love I for one would be doubtful as to his sincerity. Patience, muscle, and time are the requirements. Possibly tapping the hub occasionally with a hammer might also prove of benefit.—The Metal Worker.

Woodhaven, N. Y.

The florists and gardeners are doing prosperous business here. G. F. Neipp recently bought five acres of land and has built new greenhouses. Henry Reimels, market gardener, has this Spring built more houses, and will start a business in cut flowers. John Reimels has also built new houses. Ryder commenced business two years ago and is prospering. J. B. Hopkins started a florist business last year and reports good results. P. Wenk has put in a new telephone. Engren built three houses two years ago, and has put up more this year. Laney & Son have succeeded to the Woodhaven Floral Co., who went out of business some time ago. Frank Grimbach has enlarged his greenhouse capacity, and reports a good business. Otto, his brother, who was employed by Grosjean, has started in business for himself. Greenroth & Donnelly bought a farm at Woodhaven and have built a range of houses to grow cut flowers. Beaulieu is doing a good and increasing business. B.

Chester, Pa.

Arbitrators were chosen at Media last week to try the suit instituted by Edward N. Delahunt and Margaret L. Delahunt by their next friend, Mary G. Lenny, against the United Telephone Company. In this action the plaintiffs will endeavor to recover compensation for the death of their father, Thomas F. Delahunt, who was killed while using a telephone in his greenhouses on Edgmont avenue in the city of Chester.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

MILWAUKEE, WIS.—Ernest Reel, who has been manager of S. Courteen's seed house for the last five years, will enter into the wholesale seed business with Frank Hase, under the firm name of the Wisconsin Seed Company. An office and warehouse will be rented on West Water street.

CLARINDA, IA.—A. A. Perry Seed Company reports that the Spring so far has been very favorable until last week, when excessive rains have caused the ground to be washed out in many places, which will retard the growth to some extent, and make lots of trouble with weeds.

ROCHESTER, N. Y.—Since March the weather has been extremely dry, which has hindered planting to a very marked extent. In our own business our planting is limited to quite an extensive trial ground for testing flower seeds. Up to the present time, May 28, we have done very little planting.

MANDEVILLE & KING CO.

OMAHA, NEB.—The planting of seed crops in this section (June 2) is very backward, as it has rained for twenty-one days during the month of May. The fields are now in such condition that the farmers cannot get into them, and though it should cease raining at this moment it would take a week or ten days for them to dry up so that planting could commence again.

THE NEBRASKA SEED CO.

CELERY SEED.—Some experiments recently reported by the Maryland Experiment Station would seem to indicate that one of the causes of pithiness in celery is insufficient attention to the selection of seed. The station reports that in 1900 40 per cent. of the plants grown in an experimental plat at the station from American-grown seed was pithy, while not a single stalk grown from French-grown seed in another similar plat was pithy. The variety used in both cases was Golden Self-Blanching. The experiment was continued in 1901 and 1902 with seed obtained from several different American seed firms with a somewhat similar result. The station believes that "the superiority of the European-grown seed is due altogether to careful selection and the subsequent attention paid to the plant to keep it up to the standard." It is added: "There can be no doubt that if the American celery-seed growers were as careful in their work as the French growers are, their seed would in all probability be as good. Cheap seed is dear at any price."

400,000 California Privet and more than **400 Varieties of HARDY ORNAMENTAL STOCK.**
Also for immediate delivery, **10,000 PRIVET**, 18 to 24 inches, $15.00 per 1000.

Mention the Florists' Exchange when writing.

OHIO CORN CROP.—Bulletin 140 of the Ohio Experiment Station deals with the corn crop of that State, selection of seed, varieties, cultivation, and so forth. The area devoted to this crop in Ohio amounts to over 3,200,000 acres, with an average yield of 33 bushels per acre, and it is gradually increasing. Corn planted with one grain every 12 inches has given a larger yield and a larger per cent. of sound ears than when planted two grains every 24 inches, three grains every 36, or four grains every 48 inches, the rows being 42 inches apart in each instance. Nine seasons' testing of deep as compared with shallow cultivation has shown an increase in yield in favor of shallow each season, with an average increase of four bushels per acre for the entire period.

As to varieties of corn adapted to different parts of Ohio, the author of the bulletin says:

"I realize the fact that in naming varieties for the different parts of the State it is not a matter of latitude solely. The warm, black soil of northwestern Ohio will mature a variety that will prove a disappointment in the same latitude in northeastern Ohio. However, it is more convenient to divide the State in this way, and so I say that for south of the 40th parallel (Columbus is on this parallel) Leaming and Reid's yellow dent are suggested. Between the 40th and 41st Leaming and Clarage. North of the 41st, Clarage and White Cap yellow dent, with possibly early Huron dent for the extreme northeast corner of the State. Where the White Cap yellow dent will mature—and I hardly think it will fail anywhere in the State—it will prove superior to the early Huron dent. I am suggesting but few varieties, and these of well known sorts, for the reason that I am convinced that it is not so much new varieties that the corn grower of Ohio needs as more careful selection and breeding up of old and well tried varieties."

Statistics of the Sweet Pea.

I have lately been corresponding with seedsmen and growers of sweet peas and I estimate that the crop of sweet pea seed in this country amounts to 500 tons annually. One firm, the C. C. Morse Company, of Santa Clara, Cal., has about 300 acres devoted to this purpose, and a recent crop amounted to more than 100 tons.

It is well known that the great bulk of this seed is distributed to the consumers in small quantities, principally through the mails, by the various seedsmen. It has, therefore, to be shipped across the continent, and the railroads thereby get the benefit of the transportation charges. By thousands of nimble fingers this enormous quantity of seed is placed in small packets and sent through the mails to the multitude of lovers of the sweet pea throughout the land. The cost of postage is eight cents per pound, or $160 per ton. It will readily be seen that the government revenues are thereby increased by $80,000.—E. A. Higgins, in Country Life in America.

The Floods in Kansas.

Editor Florists' Exchange:

Kansas City has gotten through the worst catastrophe that has ever happened here. The water is down about 2 feet to-day, June 4; the gas is turned on again and a few street cars are running. Our entire bottoms are still covered by about 4 to 20 feet of water. But our old town is arising to the emergency. We have raised about $45,000 right here in the city to take care of the flood sufferers, and the fund is still growing. It is needless to say to you that every good citizen is proud of his town, and we expect to be able to take care of the people without any outside aid. Business has been paralyzed for a few days, but is beginning to start up again now.

HARNDEN SEED CO.

Outlook of the Japan Lily Crop.

The very unfavorable weather of last year has not been without its influence on this year's crop. Florists will have found out, to their regret, that last year's bulbs were badly affected with some kind of disease, and the seed bulbs show now, as the new growth is well started, that they also suffered severely.

The farmers in some districts are getting disgusted with the very uncertain crop and have discontinued planting L. longiflorum. In other districts, from 25 to 75 per cent of the plants are stunted, the seed bulbs rotten, and practically no roots have been started above the bulbs. The danger of getting these bad bulbs mixed with the new crop is therefore rather remote, as they will probably die outright as soon as hot weather sets in.

The remaining average of about 40 and 50 per cent of good plants are looking well, and with fair weather should produce good quality of bulbs. It is very evident, that while last year the good bulbs were also rather scarce, with a superabundance of bad stock which got mixed with them, this year will see a very short crop, but, unless the weather turns against them, of fair average quality. At any rate, the exporters are looking sharply after the fields, and trying to get all the rubbish thrown out, so that the danger of bringing refuse upon the market is not so great.

The consequence of this state of affairs will be, that quality will have to be paid for, and growers would rather take the high-priced grades than the cheap mixed or indifferent quality that might be offered them.

Observant cultivators will have found that the stunted growth of many of last year's bulbs is not caused by the fungoid disease from which the Bermuda lilies have been suffering for some years. In fact the bulbs must have suffered by the cold and wet season and probably were badly matured, although the tops became yellow and died down, as in fully developed bulbs.

The season this year is again backward and plenty of time should be given to the bulbs to mature before digging.

Lilium speciosum are still more scarce than L. longiflorum. The only bulbs, in fact, that seem to be in normal supply are L. auratum.

Prices on the Lilium longiflorum will be about 10 per cent higher than last year, with the usual advance of about 10 to 15 per cent on L. multiflorum.

Lilium giganteum, which look the most even lot of all, will be comparatively higher in price this year, probably 30 per cent higher than the longiflorum lilies. Of all longiflorum grades the 9-10 bulbs will be dearest.

Lilium speciosum rubrum will be about same as last season, but album will advance 10 to 20 per cent.

On L. auratum, small sizes, there may be a little reduction, but large grades will be very scarce and high.

Fancy bulbs, such as L. macranthum are looking well, and L. tigrinum, though the price is steady, can be had in goodly quantity—they are cultivated as food stuff.

There is a scarcity in some varieties of Japan maples. Rhapis, good pot-established plants, are also very short.

YOKO.

European Notes.

Very little can be added to the statements of the last two weeks. Trade continues to be moderately brisk, which is very useful to the seedsman. Ideal Summer weather is prevailing and hastening along the backward plants of all sorts, strengthening the weaker ones and generally putting a better face on matters horticultural.

The damage done by the frosts in April seems to have principally affected the fruit crops—cherries, plums, pears and small fruits suffering rather badly. Apples, being later, have escaped almost entirely. One can scarcely credit that the swedes, cabbages, etc., which lay almost on the ground in their humility to Jack Frost, are the same which to-day promise to yield quite large crops.

French Roman Hyacinths.

A meeting of the Syndicate was held on May 26 last, when the article in the Florists' Exchange on the subject of the French bulb situation was read, in which it was stated that the price of 100 to 125 francs for French Roman hyacinths was too high for the interests of American importers. The figure named is erroneous. The selling price is 80 francs and the Syndicate will send a correct report to the American papers.

The crop will fall very short of that of 1902, and the growers will maintain the prices set by the Syndicate.

The next meeting of the growers occurs June 13.

World's Fair Notes.

A feature of Washington's State horticultural exhibit at the World's Fair will be a display of celery four feet high and rhubarb the same height and five inches thick.

The World's Fair rose garden, which when it covered four acres was the largest in the world, has now been increased to six acres. The site has proven all that was expected, and the young rose bushes are making splendid progress.

A strawberry farm, comprising more than 400 varieties growing on a plot of ground an acre in extent, is a proposed exhibit for the Horticulture Department. Prof. John T. Stinson, Superintendent of Pomology, has charge of the collection of the plants. It is also proposed to have duplicates of the plants growing in pots in the Horticulture Palace, bearing ripe fruit when the Exposition doors are opened.

A Foreign View of "Anna Foster" Fern.

Mr. L. H. Foster, of Dorchester, Mass., U. S. A., is offering a very pretty novelty in Nephrolepis "Anna Foster." Judging from an illustration before us, other species of nephrolepis are "not in it" in point of beauty when compared with it. It appears to us to be a novelty well worth introducing to India.—Indian Planting and Gardening.

EVERGREENS FOR THE NORTHWEST.—B. E. St. John, Fairmont, Minn., says: "I consider the best evergreens for the Northwest to be: First, blue spruce; second, Black Hills spruce; third, Douglas spruce, and fourth, white spruce. For a very hardy and rapid grower, valuable for windbreaks, the Scotch pine takes the lead. The red cedar makes the best windbreak, but is of slower growth. The Norway spruce is not adapted to our dry atmosphere, and the growing of this spruce for sale in the Northwest should be discontinued."

Damage to Kansas Nurseries by Floods.

The situation in Oakland is worse than was expected, says the Topeka Capital. The greatest amount of damage has been to the nurserymen. Oliver Brothers have about 130 acres of nursery stock under water. This is a complete loss, amounting to about $20,000. F. W. Watson, another nurseryman, is damaged to the amount of $15,000. E. L. Copeland is damaged to the amount of $15,000. There are a number of smaller nurserymen who are almost out of business. They are M. T. Kelsey, Roy Williams and Ira Orner.

Some Philadelphia Notes.

A very short trip to Philadelphia enabled the writer to make but a brief visit to a few friends in the neighborhood of his stopping place. Mr. John Westcott was seen on the afternoon of Decoration Day very busily engaged with the final rush work attendant on that holiday, and a run through the houses made it self-evident that the demands on the stock of Mr. Westcott's firm had been heavy. While Memorial Day is a banner one for the trade throughout a great section of the country, it is probable that in no city is it more fully observed than in that of Brotherly Love. Mr. Westcott will open his lodge on Barnegat Bay in a very few days.

At the club room Saturday night, the usual bowling exercises were going on, but attendance was not heavy, owing in part to fatigue after the hard day's work.

At Meehan's Nurseries in Germantown the main topic was the drouth. Nurserymen are having their full share of trouble on this score, and many are the expedients contrived to save the later planted stock. The first rain in some six or seven weeks fell on Friday, May 29. A long, interesting and most enjoyable carriage ride, conducted by Mr. Charles W. Kesser, manager of the nurseries, and accompanied by Mr. Joseph Meehan, was had on Sunday afternoon. The Wissahickon Drive, Fairmount Park, and miles of roads, lined with fair mansions and beautifully laid out gardens and lawns, was covered. At the Andorra Nurseries Mr. Wm. Warner Harper did the honors. Here 600 acres are taken up with a magnificent collection of trees and shrubs, and all things betokened a vigilant hand in charge and a condition of great prosperity.

The Germantown section of Philadelphia could appropriately be called "The Honeysuckle City," for this handy covering is most extensively used, and always to advantage. One lesson impressed itself: it is of su-

I Write for Florists!

BOOKLETS, FOLDERS, ADS. THAT REALLY BRING RESULTS. One florist writes, after 5 years: "Greatest help to my business of any service I ever used." My booklet, with sample ads., free.

FRED. H. CLIFFORD, Morse-Oliver Bldg., Bangor Me.,

Mention the Florists' Exchange when writing.

preme importance that water in practically unlimited quantity be obtainable wherever outdoor planting of young stock is made; in a drouth such as is still being experienced at this writing, water in ample supply means hundreds of dollars saved to the acre.

A. T. D.

Seasonable Notes.

In times of drouth make a note of what trees, shrubs and flowers stand the weather well. Customers often ask questions which such notes will enable you to answer.

Whether you issue a catalogue or not, you will need to know what stock you have to sell. Prepare books now in which to record later on what you have and the sizes.

Hydrangea paniculata grandiflora will give a late crop of flowers if their growing shoots are nipped off at this time. Heads of flowers smaller, but more numerous, result.

The greater number of mock oranges are not sweet scented. This is the time to determine which are and which are not, while the bushes are in bloom.

Continue puttnig in green wood cuttings of hardy trees and shrubs. Many sorts not expected to, will root in this way. As a rule anything that can be rooted by layering will root from cuttings.

Keep the hoe harrows going continually in the nursery. The fine, loose surface created is as good as a mulch in preserving moisture.

Memorial Day Flowers.

The extraordinary drouth which fell on Philadelphia this Spring utterly routed the flowers which the G. A. R. posts were accustomed to secure. Practically not a weigelia nor a snowball could be had—the two kinds so much desired, because of the long sprays of flowers they afford. Even the foliage of these bushes, to say nothing of the blooms, was burned up. It was the worst season in this respect ever experienced. In the herbaceous borders there were many peonies and irises, and there was a lively call for these; and, no doubt, florists who had a supply of indoor flowers met a great demand for them.

But as the surrounding meadows were full of ox-eye daisies, which children brought to the posts in great quantities, there were flowers enough for every grave.

After all, leaving out the question of business, the daisy is as good as the costliest flower. It is the sentiment that goes with the act that counts, not the value of the flowers.

Pruning Shrubs.

Florists who have charge of grounds to keep them in order, as many have, will find the present a good time to prune flowering shrubs, taking them in hand one after the other as they go out of bloom. Golden bell, snowball, weigelia, many spiræas and other shrubs are over with us, and all are ready for the pruner. The older branches which have flowered should be cut out, that those of the present season may the better perfect their youth. The appearance of the bushes need not be sacrificed by cutting out too many of the older branches. If there is a good supply of young shoots, that is all that is required. If, in order to keep a good shape, the tops of the young shoots be nipped off, it does not impair the desired result.

The Rose Acacia.

Among ornamental shrubs of a half spreading nature the rose acacia, Robinia hispida, occupies a good position. The bright rose pink flowers, in good sized clusters, are sure to appear every year, in May with us, and are of much beauty. For a great many years those in collections hereabouts bore sterile flowers; at least no seeds were ever produced; but, recently, in an importation from Japan, a plant of it came, and this one seeds prodigiously. Heretofore, propagation has been from pieces of root. but now that seeds can be had easily another and quicker mode of increase is opened. The seed pods are very ornamental, being covered with bright red hairs, so that the appearance of a bush is interesting even after flowering is over.

It has been noticed, too, that this seed-bearing one is of more upright growth than the other, which renders the former more desirable. The old sort was much subject to the attack of a stem borer. It remains to be seen if the newer one will be. There appears no reason why it should be exempt, but we are hoping it will be.

English Ivy Under Trees.

To those who deal in plants of a hardy nature, what best to plant under trees is a question often asked. The good old vinca is often used, and where the branches of trees are not too low this plant is often satisfactory. Wherever hardy, which it would be in all the Middle States at any rate, in such a position, the English ivy has proved satisfactory. As with periwinkle, it roots as it grows, hence has a chance to take advantage of passing showers which but moisten the surface often. No plant will do well without light and air, and it is useless to set any sort under trees the branches of which are within a foot or two of the ground. With a three-foot space, the requirements of the ground plants would be met. Large trees take much of the food from the soil, making it necessary to place a little food within reach of the plants. Thoroughly rotted manure, or bone dust, should be afforded.

In addition to the plants already named the evergren honeysuckle does fairly well under trees, and in such position keeps its foliage green all Winter. Both this and the ivy will stand cold weather better when on the ground than when growing in an upright position.

Sweet-Scented Magnolia.

As the sweet-scented Magnolia glauca is always found in low ground in its wild state, it indicates its preference of situation. In the vicinity of streams in low woods it is usually met in localities to which it is indigenous. In many places it grows where it appears to be actually in water a part of the time, so full of water is the soil. But in cultivation it does not ask for a very wet place. A damp one it does want, preferably, but not as a demand. Very good ones can be seen planted in ordinary places on a lawn—and thriving well.

In the month of June it perfects its deliciously scented white flowers, and these are not all out at one time, but succeeded one another, lasting all through the month of June. The odor is peculiarly grateful. The pale green of the leaves, especially of the young growth, is quite attractive.

The propagation of this magnolia, as well as of all that are raised from seeds, is best accomplished by collecting the seeds as soon as ripe in Autumn, washing them free of pulp and mixing them with damp soil as soon as cleaned. Before freezing weather sets in, or as soon after being cleaned as desired, sow them outdoors. Cover the bed with leaves, kept in place by slat frames or other contrivances, until the plants are above ground in Spring.

JOSEPH MEEHAN.

The American Association of Nurserymen held its annual meeting in Detroit, Mich., June 10 to 12. We hope to give a full report of the proceedings in next week's issue. Last accounts state that Atlanta, Ga., was after the gathering for 1904.

Orange, N. J.

The regular monthly meeting of the New Jersey Floricultural Society was held on June 3. An interesting paper upon the outdoor cultivation of roses was read by Andrew Grierson, gardener for Mrs. Hicks-Arnold, of Portchester, N. Y. It was well received, and a copy was requested for the library of the society.

The usual monthly show of flowers was observed. Noticeable were some fine poppies from "The Terraces," Llewllyn Park, sent by John Hayes; and a Dendrobium suavissimum, from Malcolm MacRorie; strawberries from George Smith, and a collection of vegetables from Peter Duff, which received the maximum number of points by the judges. An adiantum of large proportions, exhibited by D. Kindsgrab, also scored 100 points.

The names of donors of the silver cups were announced. They are: Messrs. Sydney Colgate, John Crosby Brown, Orson D. Munn, J. Van Gasbeck, Wm. Jenkins, all of Orange. The date of the rose contest for the silver cup of Isaac Shoenthal was set for June 5.

The rose show on the 5th inst., was held in the society's rooms. It took the form of a social reception to the friends and patrons of the society. A brief informal address of welcome was made by President George Smith, and the presentation of the cup was made, in Mr. Schoenthal's name, by his secretary. The flowers of the contest occupied the center of the room, but the decorations, under the efficient management of Joseph A. Manda, were from the prominent greenhouses of the vicinity. A fraternal invitation had been extended to the B. P. O. Elks (who are the society's landlord) and their ladies. Refreshments were served.

The winner of the cup was Dietrich Kindsgrab, gardener for Mr. Wm. Runkle. The recipients of three highest points for six varieties of four blooms each were: D. Kindsgrab, 450; Peter Duff, 430; Michael Cox, 343 points. Particular attention was given to blooms of Kalmia latifolia exhibited by Michael Cox from the place of Thomas A. Edison in Llewellyn Park—the finest, many said, they had ever seen.

The display of rhododendrons in Llewellyn Park has attracted many visitors during the past two weeks. The groups were set out about 1857, when the park was first laid out, and now cover many square feet.

The only sign of severe drouth shown in this locality is in the grass upon the lawns and suspension of most gardening, save where there is abundance of water.

J. B. D.

St. Louis.

News Notes.

The opening of Shaw's Gardens to the public is always looked upon with great interest by the St. Louis people. Last Sunday the attendance was large, but not so large as at the last opening, as the flood attraction at the riverside was too great. Professor Trelease and his large corps of assistants were kept busy all day long showing the visitors around. Quite a lot of new features have been added. The orchid house, under the management of Mr. McClure, is in fine shape. The next opening will occur the first Sunday in September.

Harry Balsley, of Detroit, is in town looking up trade. Ever since 1893 Harry has paid us a visit yearly, and has become very popular with the St. Louis trade. His big gold badge shows that he is still in politics in his home city.

A large attendance was at the bowling alleys on Monday night, 12 members rolling. Harry Balsley acted as scorekeeper. The bowling was of a high order and some very good scores were made. Beneke was high in the four games rolled, with an average of 183¾; Carl Beyer second, with 166 2-3, and Fred Weber third, with 161 1-3. High single games was by Beneke 213, Beyer second, 188, and Kuehn third, 173. These games will be continued every Monday night, and a team will be selected to represent St. Louis at Milwaukee next August.

ST. P.

Boston.

Flower Show.

The rhododendron and peony shows of the Massachusetts Horticultural Society were combined this year, and in all a very creditable exhibition, considering the dry season, was held Saturday and Sunday. The rhododendron display was not so extensive this year, but included some fine exhibits, notably those of Mrs. A. W. Blake and Mrs. John L. Gardner. Mrs. Blake also staged a nice lot of hardy azaleas and a few fine clerodendron plants. Azaleas were also very well shown by T. C. Thurlow and Mrs. Gardner.

The orchid displays of J. E. Rothwell (Emil Johanson, gardener) and Lager & Hurrell, Summit, N. J., who staged plants, and J. S. Bailey (A. J. Newell), who filled several bottles with the cut flowers, were very attractive and interesting. Mr. Rothwell's exhibit included a novelty in a seedling Lælia Ragotiana (L. grandis x R. cinnabarina), which received a certificate of merit while his display won first prize. Another novelty among the plants shown was a seedling canna by D. F. Roy, gardener to E. S. Converse. The plant is of dwarf habit and throws exceptionally large flowers of a brilliant scarlet hue. It is named Mrs. E. S. Converse. For this promising variety a certificate of merit was given Mr. Roy.

The peony exhibits were large and varied. Mrs. J. L. Gardner won first, W. Whitman second, and W. J. Clemson third prizes in that class. Messrs. Whitman and T. C. Thurlow captured the other prizes for collections of thirty or more double varieties and twelve or more single varieties, while Mr. Thurlow won the special prize, a silver gilt medal offered by Kelway & Son, Langport, England, as well. This was for a collection of eighteen varieties named single or double.

The German irises, hardy pyrethrums, hardy ornamental trees and shrubs, shown by Mrs. J. L. Gardner and Anthony McLaren, were very attractive, as were the vases of flowers arranged by Mrs. E. M. Gill and Miss Hattie B. Winter. E. A. and W. K. Wood showed oriental poppies of excellent quality, and the Blue Hill Nursery staged a collection of 82 varieties of perennials.

At a meeting of the committee on arrangements of the Massachusetts Horticultural Society, held Saturday, it was voted to change the date of the Rose and Strawberry Exhibition to June 16 and 17. A communication from Miss Sarah B. Fay, of Woods Holl, was received and read. Miss Fay offers three prizes of $25, $15 and $10 to be competed for at the rose and strawberry show, for the largest and best display of hardy perennial roses made by an exhibitor who does not employ a professional gardener. These prizes, offered to interest amateur growers, should bring out an interesting display. Competition is subject to the rules of the Society.

F. J. N.

CANADIAN NEWS

Hamilton, Ont.

We had another rain last Sunday and Monday; it was the right kind and went right in. We can stand a little more without grumbling. Bedding out continues active. Prospects are for a thorough cleaning up. The seedsmen have had a very busy season; both Messrs. J. A. Bruce & Co. and Robert Evans Seed Company report largely increased business. Webster Bros. are shipping a great many bedding plants and quantities of mail orders; they are doing an immense lot of planting out as quickly as possible.

Walter Holt has built a new dwelling house this Spring; he also has had a busy season.

A. E. Cole, of Grimsby, is building up quite a plant. He is making considerable additions this year, using the King iron construction.

C. F. Coleman, of Burlington, will likely add to his glass area, and has opened a flower store in the Platt department store to make an outlet for his cut bloom.

J. Hughes, the florist at Hamilton Beach, has had a busy season. That popular resort is becoming covered with Summer cottages, and an immense number of bedding and hanging plants are used.

William Brown, of Dundas, is putting up a greenhouse and will grow cut flowers.

I notice by the last issue of the Canadian Florist that the libel suit against the paper had fallen through, because the party named as plaintiff in the suit could not be found, or did not exist, or something of the kind. It must have been an interesting lawsuit.

The late George N. Sones left an estate valued at about $16,000; his two sons, Edward and Frank, are continuing the business.

Florists' Club.

There was not a quorum at either of the last two meetings. Of course, the pressure of business was the cause, and no doubt the meetings will be much more largely attended. The next meeting will be held on the 16th inst., and will be devoted to a discussion on roses.

BEAVER.

Montreal.

Sixty-one days have elapsed since we have had a good day's rain. Forest fires are common throughout the Province of Quebec and in Eastern Ontario, and to-day (June 3) the Island of Montreal is being treated to quite a heavy shower of ashes. The situation is fast becoming unbearable, and plant growers who are without water are at their wits' end to obtain a sufficient supply, many having to haul it a long distance in barrels.

There will hardly be any hay at all on the Island, and as for nice green lawns, they are not in evidence. Even that nasty weed, the burdock, is curling up its leaves, owing to the drouth.

The Gardeners' and Florists' Club has decided to hold its annual picnic at Ste. Rose. Arrangements have been made for a special train to leave Place Viger station, at 9:30 a.m. on July 8.

The bedding plant trade is at a complete standstill, but it is a good thing for the florist that June brings a goodly number of weddings. Peonies are in great demand for decorations, and in short supply.

W. C. H.

ST. PAUL.—Decoration Day trade was the very best on record and everything went at good prices. There was not enough good stock to go round. In cut flowers roses and carnations were most plentiful, and most called for. There was a good supply of lily of the valley, longiflorum lilies, gardenias, snowballs, etc. We never saw a Memorial Day before when there was such a good demand for everything in the line of cut flowers. The cemeteries were most beautiful, with nearly every grave decorated by some floral remembrance.

Bedding plants have sold unusually well, and at this writing there is very little left.

Carnations in the field, stimulated by beneficent showers, are growing very nicely, and all vegetation is farther advanced than usual at this season.

After you have been working all day in the greenhouses and potting shed you do not feel much like sitting down and answering the day's correspondence. But the work has got to be done. There is absolutely no way out of it. You cannot afford to hire a person to take care of the correspondence for you. Even if you could, you realize that it is far more satisfactory to do the work yourself, if in any way possible.
There is only one thing left, and that is for you to reduce the drudgery of writing as much as possible.
time nor the inclination to master the intricacies of any of the so-called "standard" typewriters.
Another point, and an important one, is the improved appearance of typewritten correspondence. Your letters, when typewritten, will be doubly effective business bringers, and the use of a LAMBERT will increase your commercial standing, in the eyes of your correspondents, a hundred fold. Pen and ink letters, besides being difficult to read, are considerably out of date. All business men give preference to typewritten letters.
Your Time, Labor and Money Saver
THE LAMBERT $20 TYPEWRITER
Easily and Quickly Learned.
Here is where the typewriter steps in.
For you, or any other person who must, or desires to write his own letters, the LAMBERT $20 TYPEWRITER is the ideal instrument because it is so simple, and so easily learned to operate. In from six to ten half hourly sittings (do not try to learn the machine all at once) you will have equaled the speed of your pen. After that additional speed is only a matter of practice. Dexterity in the use of the LAMBERT will come to you without effort and you will soon be agreeably surprised at your progress. The average business man has not the
A Boon to Every Florist.
The LAMBERT $20 TYPEWRITER is already in use by a number of florists, all of whom are high in their praise of the machine. Every instrument fully guaranteed.
Compare the writing of the LAMBERT $20 TYPEWRITER with the writing of any other machine on the market. The decision as to superiority rests with you. Sample of LAMBERT writing and further particulars cheerfully given. Write

Charles T. Siebert, Station B, Pittsburg, Pa.

KIND WORDS NEVER DIE.

BELLEVUE, PA.

CHARLES T. SIEBERT: Please book my order for 100 pounds of Zinc Never Rust Glazing Points. I have used five different kinds in the past twelve years, and none of them gave me satisfaction like yours. They will stay in, are easy to drive, no rights or lefts, will hold the glass in place, and do not rust away like all others I have used. Your Zinc Points are easy to take out when making repairs. I have used about 100 pounds of your Zinc Points in the last two years, and I am perfectly satisfied with them.

Yours truly,
F. BURKI.

CLEVELAND, OHIO.

CHARLES T. SIEBERT:—In our twenty-five years' experience with glazing points of all kinds, I can say your Zinc Points are the best to date.

CHARLES H. WILSON,
Mgr. for Grant-Wilson Floral Co.

LOCKLAND, OHIO.

CHARLES T. SIEBERT:—I must say the Zinc Points have given great satisfaction I have over 100 pounds on my houses, and feel justified in stating that they are the best point on the market.

Yours respectfully,
W. K. PARTRIDGE, Florist.

English Horticultural Notes.

SOME NOVELTIES of special trade merit have been exhibited at horticultural meetings in London, Eng., within the past two or three weeks. To name these in a line they are: Rubus moluccanus, a warm-greenhouse climber, with beautifully marked foliage, being suitable for florists' decorations; Bull's White Excelsior Stock, which has large double flowers; Nicotiana Sanderi, a rose-pink flowered tobacco, and one likely to be eagerly sought; Cordyline (or Dracæna) Père Charon, with dark, shining crimson leaves; and lastly, Richardia hybrida Solfatara, which may be described as a sulphur-colored Richardia (Calla) Elliottiana, and has a purple blotch at the base.

RUBUS MOLUCCANUS.—The well-known Cissus discolor will very likely be always favored before Rubus moluccanus, unless for the larger and heavier decorative displays. The leaves are 5 to 8 inches in length and three-lobed. They are velvety in texture, the whole surface being crinkled and veined. They are flushed and mottled with bright green, dark green and a glaucous or silvery hue. They are stout and are borne alternately on long, slender, half-woody brown stems, which are, of course, pliable. Messrs. Veitch, of Chelsea, staged the plant.

NICOTIANA SANDERI.—This was thought by many experts to be the best "new plant" brought before the judges at the recent Temple flower show in London, and Messrs. Sander & Sons, of St. Albans, are fortunate in possessing the stock. It is taller and finer in growth than the common, so-called tobacco plant (N. affinis) and its beautiful rose-pink flowers, which are abundant, have seemingly longer and narrower tubes. As an ornamental and easily grown plant it will doubtless be variably utilized.

CORDYLINE ((DRACAENA) PERE CHARON.——This is a broad-leaved form, of capital habit, the foliage arching downward, and colored a rich dark crimson, with streaks almost of a scarlet color. It was brought to London by Mons. L. J. Draps-Dom, of Laekin, Brussels, and received a certificate.

RICHARDIA (CALLA OR ARUM) HYBRIDA SOLFATARA.—It is a considerable time since I first heard of this in Berlin. It has now been recognized by an award of merit in London when shown by Herr G. Bornmann, of Blakenbourg, Harz, Germany. Being of a soft sulphur color and having a purple blotch at the base, the foliage, too, being velvety in texture and splashed with white. it may find acceptance.

ROSES.——Souvenir de Pierre Notting is one of the teas of the future, and is doing well in England. Messrs. Paul & Son, of Cheshunt, Herts, had an award for their tea rose named Queen of Sweden and Norway, a dwarf grower, with soft creamy flowers flushed blush-fawn, and these are of good shape.

In England, the Garden or Decorative Roses are being rapidly added to. Dorothy Perkins is a good type of garden rose, and William Paul, of Waltham Cross, has had his Waltham Rambler recognized. B. R. Cant & Sons, of Colchester, have likewise had an award for their somewhat similar Blush Rambler. Both of these are rampant, vigorous rambler roses, producing huge free clusters of large, open, single pink flowers, with a pale or white center. Both have a place.

DOUBLE TUBEROUS BEGONIAS.—Our growers have reached a high state of perfection with these, and the leading cultivators are Blackmore & Langdon Tiverton Hill, Bath; B. R. Davis & Sons, Yeovil; Ware, Ltd., Feltham, Middlesex, and John Laing & Sons, Forest Hill, London. I can guarantee the merits as seen in England of the following named sorts: Mrs. Moger, salmon-scarlet; Mrs. Portman Dalton, blush-carmine, Mrs. W. P. Neal, white, faintly flushed blush; and Sir Thomas Lipton, orange-scarlet; all of which have been shown by Blackmore & Langdon. A pure white, fringed edge single, named Lady Horne, from Laing & Sons, is a beauty.

The name of Bull's stock mentioned in my last notes, is White Excelsior, and seeds sell at 3s. 6d. per pound; 70 per cent. are guaranteed to come good doubles. J. HARRISON DICK.

GEO. M. EMMANS, NEWTON, N. J.

If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN,** although it has been cultivated many years, is still scarce As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there wil be no change in price this season.

We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

Mention the Florists' Exchange when writing.

Quick Profits. Low Prices.

THE

ANNA FOSTER FERN

THIS Fern is fast growing in popularity. There is no other Fern grown which will return the profit so quickly. Being a female frond plant it reproduces faster than any Nephrolepis yet introduced. The price is so low the buyer is sure of large profits. The $20.00 per 100 plants will make $1.00 and $2.00 plants by Fall.

A Fern once seen is sure to sell. I am now ready with as fine a lot of plants as were ever offered.

3 in. pot-grown, $20 00 per 100. Plants from bench for 5 in., $6.00 per doz.; for 6 in., $9 00 per doz. Plants in pots, 6 in., $12 00 per doz; 7 in., $24.00 per doz.; 8 in., $36.00 per doz.; 9 in., $4 00 each; 10 in., $5 00 each.

These are beautiful plants for immediate sales. The call for large plants in New York, Chicago and other cities has been such that I have been unable to fill my orders since January 1st until this month. These plants are grand for Summer decoration.

Also Now Ready

20,000 BOSTON FERNS

$25.00 per 100. Cut from bench.

I hope to have 100,000 small Bostons for Summer delivery, $5.00 per 100; $40.00 per 1000. Book your orders early. Bostons will be in great demand for next season. Pot plants now ready. 6 in., $6.00 per doz.; 7 in., $9.00 per doz.; 8 in., $15 00 per doz.; 9 in., $24.00 per doz. Larger plants, 10 in. and 12 in., on application.

Also

10,000 KENTIA PALMS
10,000 ALTERNANTHERAS

2¼ in., $25.00 per 1000.

L. H. FOSTER, 45 King St., Dorchester, Mass.

Mention the Florists' Exchange when writing.

FOUNDED IN 1888.

THE FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.
2, 4, 6 and 8 Duane St. New York.
P. O. Box 1697. Telephone 3766 John.

REGISTERED CABLE ADDRESS:
Florex, New York.

YEARLY SUBSCRIPTIONS.

To United States, Canada and Mexico, $1.00. To foreign countries in postal union, $2.00. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter. The date on the address label indicates when subscription expires.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, holding them in perfect order for ready reference. Price, postpaid, $1.25.

ADVERTISING RATES.

Per inch, $1.25. Special positions extra. Send for Rate Card, showing discounts on continuous advertising.

For rates on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

Of the 500 flower stands in the metropolis, says the New York Sun, the average stock amounts to $100 and the stand itself to $50. Seventy-five thousand dollars is invested in these stands and their wares, which are looked after by 1,000 men.

The El Paso County Horticultural Society, of Colorado Springs, Colo., is considering the matter of erecting some sort of permanent memorial to its late president, H. C. Harris, whose death was recently chronicled in these columns.

THIS WEEK'S SUPPLEMENT.

Avenue of Norway Spruce.

The sight of single specimens of Norway spruce is a common one, and hedges of it can be found on all old estates, but rarely are avenues of the trees met with, especially of the character of that on the W. W. Phelps' estate, at Teaneck, N. J., which our illustration represents. These trees line both sides of a fine road leading to the ruins; and the avenue is a source of much interest to all who see it.

It is sometimes objected that these evergreen lined avenues are unnatural and out of place. I have seen them too formal in appearance, on small places, but on estates, where roads run for miles, they are entirely in keeping with nature. I know of a forest of hemlock not far from Philadelphia, now embraced in a park, in which a road has been laid out through the trees, and, save the rocks and little underbrush here and there, it looks no more wild than does this avenue of Norway spruce. It would be a shady drive through it in Summer and a comparatively warm one in Winter.

Donald Matheson, the gardener on the Phelps estate, gives the date of the planting of these trees as in 1880. They were then little fellows, but 18 inches high. Now they are 45 feet on an average.

Anyone passing through this avenue, or any avenue of these trees, will find a great diversity of character in them—some of very luxuriant growth, some of almost weeping character; and, if in Spring when they are pushing out their buds, some far earlier than others. Experts say the ones that push early are the handsomest specimens in the end, making a more luxuriant growth than the others.

Referring to the height of these avenue trees when planted, 18 inches, though a little larger could have been planted as safely, there is no denying that far better results are obtained from the planting of small-sized trees than large ones. JOSEPH MEEHAN.

American Pomological Society.

All indications point to a largely attended and important meeting of the American Pomological Society at Horticultural Hall, in Boston, September 10-12 next. An interesting program is assured, as many of the leading horticulturists of the United States and Canada have already given notice of their intention to be present and participate in the proceedings, thus giving to the discussions that broad international character for which the meetings of this society are noted. Reduced rates will be given by the railroads and the opportunity should not be neglected by any horticulturist who can possibly reach Boston.

The new plan for ad interim examination of new fruits entered in competition for the Wilder medal, which is now in effect, is arousing very active interest among fruit growers. Under this plan the originator, discoverer or introducer of a new variety is given the opportunity to submit specimens of his production to a jury of competent and disinterested experts for examination, whenever the fruit reaches the proper stage of maturity. These experts make a careful examination of the varieties submitted to them and make a report upon each to the committee of awards, in advance of the biennial session of the society. Originators in remote sections of the country are thus afforded an opportunity to compete for this highly esteemed trophy on equal footing with those residing near the meeting place of the society and regardless of the time of year when their varieties mature. Competition is not restricted to members of the society, but is free to all, no entry fee being required. This plan was made public by the executive committee of the society in April, and already some thirty new sorts, comprising varieties of strawberry, raspberry, sand cherry, grape, peach, plum, pear, apple, loquat and pecan have been entered for examination. These are from widely separated climatic regions, representing eleven States, territories and provinces. Specimens of them are now being examined by the proper subcommittees as they mature. Entries of other new varieties may be made at any time.

Obituary

George Hancock.

George Hancock, senior member of the firm of George Hancock & Son, Grand Haven, Mich., died Saturday morning, June 6. He had been in poor health for the past year.

Mr. Hancock was born in Devonshire, Eng., April 27, 1818. He married in England. Mr. and Mrs. Hancock came to New York in 1849. They went to Michigan in 1865, settling at Spring Lake, where he became engaged in the lumbering business. He moved to Grand Haven in 1877 and had been a resident of that city ever since. Mr. Hancock had always led an active life and was always prominent in carrying forward any enterprise that might be to the improvement of the community. He was one of the first men in Michigan to introduce the cultivation of celery in that State. His first experiments with celery were made as early as 1866.

On account of poor health and the consequent necessity of an outdoor occupation, Mr. Hancock took up the business of raising fruits and vegetables in 1872. Later he added the floral department to his establishment and his success in these lines was remarkable. For years he had been associated with his son, James G. Hancock, under the firm name of George Hancock & Son. The firm was greatly interested in carnation growing and introduced into commerce several new varieties.

The deceased's character and integrity were above reproach and he held the confidence and esteem of all who knew him. His wife died on January 31, 1894. He is survived by his son, James G. Hancock, his daughter, Mrs. Frank C. Bury, of Detroit, and seven grandchildren.

The funeral was held from the late residence on Washington avenue Monday afternoon.

Horticultural Trials and Bliss.

Lo! the commuters, at this time of year,
  Be-parcelled and distracted as of yore,
Like hunted hounds their visages appear,
  E'en as in Winter, maybe somewhat more.
'Tis true the furnace needs no shaking up,
  Nor midnight journeys to the cellar door,
Which fills with woe the tired commuters' cup,
  As they traverse the cockroach-sprinkled floor.

Yet there are Summer woes, and rabid ire
  Possesses those wan, pallid folk to-day
Who plod at morn and eve their native mire,
  At some "ville" in Long Island or N. J.
Nocturnal rambles of the Winter past
  Have left of misery a vivid trace,
And one might well assume a peaceful cast
  Of countenance would dwell upon each face.

Ah, no! Still nervously they rush about,
  Consumed with envy and with jealous mien,
To see if Smith's tomatoes are a-sprout,
  To note the hauteur of his butter bean.
Suburban bliss consists, when 'tis attained,
  Of sitting on piazzas in a group,
Rejoicing that for weeks it has not rained
  And that one's neighbors' peas are in the soup.

Small matter how your products may proceed,
  So long's the others' wither, pall and fade,
Watch for his verdure growing brown, with greed,
  Gloat o'er the caterpillars' daily raid.
Then on his railings lean with cynic smile,
  What time he wallows in this ill-grown truck,
And with a voice attuned to stab and rile,
  Cheerfully murmur: "What, once more no luck?"

—C. F. R., in New York Herald.

A Card

Mrs. Edith A. Withers thanks the members of the New York Florists' Club for their expression of sympathy on the death of her late husband, James W. Withers.

June 7, 1903.

Reflections on Current Topics.

MR. EDITOR: As that mulish topic appears to interest some of your readers, kindly afford me space for one more reflection on what has appeared in your columns on the subject. I accept John G. Esler's nomination to form one of the proposed hinny quartette. Fortunately, I am eligible, having been classified heretofore by "Lastman" in the genus Equus var. asinus. As an S. A. F. convention innovation, allow me to suggest that the poet laureate of the craft be asked to contribute a lyric to be entitled "Only a Peony Blossom," with hee-haa accompaniment, to be brayed by the quartette for the delectation of the delegates to Milwaukee; followed by an original recitation by Rudd on "Asses I have known; or when is a committee not a committee?"—the effervescence of the ginger jar. This entertainment to occur in the program after the secretary has read his report on Japanese peonies "registered provisionally until March 23," and evidently still waiting final adjustment.

⁂

John Birnie's interesting communication further convinces me that I am out of the running for that bowling contest. I rest satisfied, and rejoice accordingly. I see Mr. Birnie is still afflicted with what De Quincey designates anagnorisis regarding my personality. If that "flea" were as lazy and accommodating as its relation that stimulated the Scotchman's benediction for the Duke of Argyll, John's thumb might be broad enough, and his patience enduring enough to effect its capture; but being a mule of another color, it remains as elusive as the settlement of the essay question, according to "E. L.'s" ideal.

⁂

The long-looked-for book, "The American Carnation," has at last materialized, and, having procured a copy, I have been interested in the various reviews of it that have appeared in the trade papers. These reviews in general must be very gratifying to the author, as well as to the publishers. No book written was ever perfect, and a "damning with faint praise" is sometimes due to the disposition and present state of mind of the critic—who through a misconception of his ability, or the lack of it, "drops the substance in his effort to catch the shadow," as Spencer says—more than to flagrant inherent defects in a work. I am led to reflect thusly on reading what purports to be a criticism of Mr. Ward's book in one of your Western contemporaries, more particularly those portions of it which make mere bald assertions without specification in support thereof. One wonders, too, why adverse comments on "Scott's book," should be dragged into a criticism of "Ward's book," neither of which has any relation to the other! This looks like a "dirty insinuation," purposely planned in order to be noxiously nasty! The author of the criticism in question appears to have been imbued with the spirit of the splenetic individual who wailed, "Oh, that mine enemy would write a book!"

A humorous part of the criticism occurs when the critic, who complains of "careless writing" in Mr. Ward's book, employs such bunkum in his own production as "somewhat daring methods of thought," etc. That reminds me of the author of a Chrysanthemum Annual who once told the public that John Thorpe had "brusque yet kindly features." The glass houses story should never be forgotten by reviewers.

However, the critic entirely voices my sentiments when he says: "The book is one which every grower must have."

⁂

I continue my "ponderings over pages of forgotten lore," and though not a "current topic" am led to remark: Has it ever occurred to the general reader how much American horticultural literature owes to the English institution named "Kew"? That establishment is the alma mater of many of the old-time and present contributors to the trade and other class papers. (That does not infer the writers are to be included in Birnie's category of those now "who do not know so many things that ain't so."). In a list of "old Kewites" that recently came under my eye I observe the following familiar names, that often have appeared here as those of the authors of articles on horticultural topics:

Michael Barker, who left Kew in 1884, a writer on insect and plant subjects, author of a book on chrysanthemums and now editor of one of your contemporaries. Robert Cameron, the curator of the Botanic Gardens at Harvard, Mass., an interesting writer on gardening subjects; left Kew in 1887. Edward J. Canning, curator of the Botanic Gardens, Smith College, Northampton, Mass., left Kew in 1887, an occasional contributor to the trade papers. William Falconer, than whom no man is better known to former readers of horticultural journals, through his numerous writings, author of a book on mushroom culture, formerly editor of Gardening when it was an original paper, recently superintendent of Schenley Park, Pittsburg, and now in charge of a large cemetery in Allegheny, Pa. Mr. Falconer left Kew in 1872. David Foulis, now deceased, left the institution in 1855—a writer on golf, curling and plant topics. Theoph. D. Hatfield left Kew in 1878, now in charge of the famous Hunnewell Gardens near Boston, an authority on chrysanthemums and a versatile writer on plants generally. Ernest Hemming, whose notes on herbaceous and other plants appear often in current horticultural literature. He left Kew in 1891. Fred. Goldring, a florist, of Albany, N. Y., a contributor on orchids, left Kew in 1879. James Gurney, the well-known curator of the Botanic Gardens, St. Louis, Mo. James McPherson, Trenton, N. J., who is contributing a series of articles on the geographical distribution of plants to Park and Cemetery; he left Kew in 1864. The late lamented Thomas Meehan, of Germantown, Pa., left Kew in 1848. His work in and for American horticulture remains an enduring monument to him. Lastly, William R. Smith, "to whom the nations turns for what is best in botany, and what is best in Burns," curator of the National Botanic Gardens, Washington, D. C.; left Kew in 1852.

These are some of the Kew men whose writings adorn the pages of our trade papers, ancient and modern; and who will say that they have not done much to advance the art in America?

My only regrets on conning the pages of that English pamphlet were that, not emblazoned there were the cognomens of E. L., the ginger jar man, W. S., Ivera, J. Austin Shaw and others in the United States afflicted with Cacœthes scribendi, including JOB.

Job's Identity.

Editor Florists' Exchange:

I know you will set me down as an old ass (or a mule) for presuming to write opinions to your valuable paper from such a wayback town as this, but I have been so taken up lately with the reflections of Job, and the efforts that some other writers have been putting forth to identify that namesake of the patriarch, that I thought I would put in my oar and settle the whole matter.

When I was in New York a few weeks ago, one of your big-bug florists invited me to attend the club meeting with him. Says I, "I don't come to your town often and I have made up my mind to go and see the waxworks in the Eden Musee, and, unless there is something very attractive going on at your club, you can count me out."

"Well," says he, "we shan't have any wax figures on exhibition at the club, but I heard that Job was coming to the meeting, and, you know, Job would knock the spots out of any wax figure."

Says I, "You fellows down here are all barking up the wrong tree. Job would not live in New York rent free. He's a Buffalo man. Why, I sized up his writings a long time ago. You may fool me on dyed carnations, but you can't do it on newspaper writers. Job is a Buffalo man and I know it. See how he tackles every subject that comes up, and does it in good shape, too. Who but Buffalo's only author would be able to handle every topic in such a masterful style? No, your club meeting may be all right and lively, but excuse me this time. I must see the waxworks," and I did.

We haven't got a florists' club here in Herkimer, the town is hardly big enough for that yet. There are only a few of us in the business here, and we could get along with less I think, but I don't want to be personal.

The weather is fearfully dry up here and I suppose you are thinking by this time that the weather is not half as dry as my writing, so no more at present.

H. A. SEED.

Herkimer, N. Y.

American Peony Society.

The organization of the American Peony Society was completed at Detroit, Thursday evening, June 11.

Thirty-six members voted to incorporate under the New York State laws. Officers elected were: President, C. W. Ward, Queens, N. Y.; vice-president, Guy A. Bryant, Princeton, Ill.; secretary, A. H. Fewkes, Newton Highlands, Mass.; treasurer, J. H. Humphreys, Philadelphia. Executive committee: President, vice-president, secretary and treasurer, ex-officio, and C. S. Harrison, York, Neb.; E. A. Reeves, Cleveland, Ohio, and William A. Peterson, Chicago. Nomenclature Committee: William A. Peterson, C. J. Malloy, Rochester, N. Y.; John A. Charlton, Rochester, N. Y.; J. F. Rosenfield, West Point, Neb.; A. H. Fewkes. Exhibition Committee: Guy A. Bryant, E. A. Reeves, James Wheeler, Brookline, Mass. Press Committee: C. Betscher, Canal Dover, Ohio; C. S. Harrison, J. H. Humphreys. The date of the next meeting is to be decided by the directors.

A. H. FEWKES,
Secretary A. P. S.

CHANGES IN BUSINESS.

NORFOLK, VA.—The Norfolk Floral Company will engage in business here.

We are advised by W. W. Ronsinger, Montezuma, N. C., that W. A. Davis & Co., Marion, N. C., have dissolved.

OXFORD, PA.—George Sagers has bought of Joseph Philips the store property and greenhouses at Lombard, Md., for $3,000.

MONTPELIER, VT.—E. Jacobs has sold his greenhouse and business to Emslie Bros., of Barre, and gives possession of the same July 1.

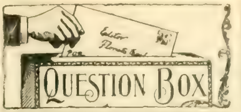
NEWTON, N. J.—Messrs. William M. Reider & Brother have purchased and will operate the greenhouse establishment of the late H. W. Merriam, at 8 Union place. A new greenhouse is in course of erection, and another is contemplated next Fall. Roses and carnations will be specialties.

STONEHAM, MASS.—Nelson Parker has sold his estate No. 10 Pomeworth street, consisting of a 9-room house, 32,000 square feet of land, two large greenhouses and all sashes, tools, etc., to James H. Delay, of Somerville, who will make extensive improvements and enlarge the greenhouses. The property is assessed on $5,500.

DAVENPORT, IA.—Articles of incorporation have been filed for the Iowa Bird Company. The general business of the company will be to deal in birds of the songster variety, in cages and other accessories, and also to deal in flowers, seeds, flower pots and garden accessories. Furthermore, they will deal in curios, aquarium fish and aquarium supplies. The capital stock of the corporation is $10,000 and the highest amount of indebtedness to which the concern may become liable is $1,000. The principal place of business is in this city. The following are the incorporators and officers of the company: President, P. W. Madden, general manager, T. G. Rickman, secretary and treasurer, G. E. Madden.

SAN JOSE, CAL.—A corporation has been formed in this city to develop the immense resources of the Santa Clara valley as a seed growing and distributing center. The concern will be known as the Charles C. Navlet Company, and its incorporation papers have been filed under that name. The purposes set forth in the incorporation papers are to buy and sell seeds and bulbs, to grow the same, to manufacture floral supplies, wire goods, and be wholesale dealers in fertilizers, both vegetable and chemical. The capital stock is $50,000, all subscribed. The directors are Charles C. Navlet, who is also president and manager; C. P. Braslan, of the Braslan Seed Growers' Company, vice-president; M. M. Stafford, secretary and treasurer; E. G. [illegible], of the Model Clothing House, and W. J. Boschken, of the Boschken Hardware Company.

Into the company has been merged the entire interest of C. C. Navlet, who for many years has conducted a floral and seed house here. To the several hundred acres of seed land he controls will be added a greater area devoted to the same purpose, the manufacturing plant in the Bothell block on San Carlos street, and other valuable assets. The company has secured 14 acres near this city to raise plants for mail orders.



Summer Treatment of Steam Boilers.

(125) H. L. J.—Let the boiler remain full of water all Summer. Should the boiler not have been emptied for some time and there is any likelihood that the water has become muddy, it will be best to draw off the water and fill the boiler.

Mrs. Frances Joost Carnation.

(126) A. B.—The originator of Mrs. Frances Joost carnation is Chris. Besold, of Mineola, N. Y. The flower, we believe, was named in honor of an estimable lady of that name.

FIRMS WHO ARE BUILDING

ANN ARBOR, MICH.—James Goodlew will erect a rose house 22x120 feet.

DAVENPORT, IA.—John Kay, florist, is building a home on Locust and Clarity streets.

GLOVERSVILLE, N. Y.—R. E. Locher is erecting a large greenhouse on his property on North Main street.

BRIEFS FOR BUSY FLORISTS.

FERNS. Young stock of Boston Fern, to be grown on for next Winter's work, will make better plants if planted on a bench in the greenhouse, than it will if grown in pots right through the Summer. Three or four inches of soil in the bench is plenty deep enough for the plants, and the young plants should be placed far enough apart so that they will have room to grow and not get crowded before the beginning of September, when it will be time to lift and pot them.

The new fern, Nephrolepis Piersoni will no doubt thrive well under the same treatment, and as there will undoubtedly be a big demand for specimen plants of this novelty, it will pay to plant it on the benches and grow it carefully, avoiding all undue forcing and unnatural conditions until we become better acquainted with its requirements.

ARAUCARIAS.—When these are grown in quantity, it is preferable to have them in a lath house during the warm months. If such a house be not available, the next best thing is to put the araucarias out doors, and with the aid of a few posts, stretch a piece of canvas over the plants, leaving the sides open. A few inches thickness of ashes should be laid on the ground, on which to stand the pots, then there will be no danger from the drainage becoming clogged.

CYCLAMEN.—These should be out in the frames now and making rapid growth. Shade them from the full force of the sun every day, go over them twice a day and water such as are dry, using the watering pot in preference to the hose pipe. Shift the plants into larger pots as required, never allowing them to become rootbound until they have reached the flowering-sized pots.

Primula Farinosa.

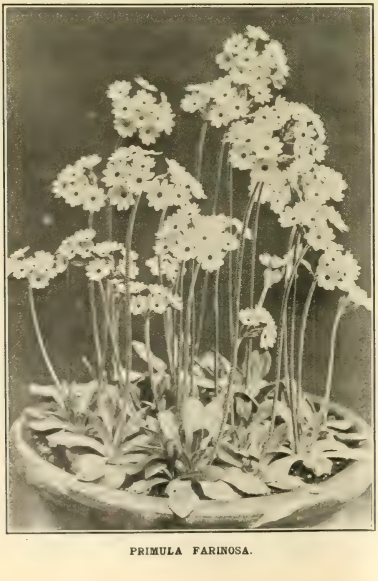
(The Bird's Eye Primrose.)

To the lover of hardy plants the genus Primula gives many gems, and the bird's eye primrose is one of the foremost. Mr. Robinson, in his book on alpine plants, says of P. farinosa: "No sweeter flower holds its head up to kiss the breeze that rustles over the elevated bogs and mountain pastures of Northern England. It is not, however, solely a native of Britain, but is also found in our American flora, being found from Maine to Quebec, and as far north as Greenland."

It is usually found in moist places, where the soil is rich in humus, and so in cultivation it succeeds best when it can get plenty of moisture; but it will not succeed if the moisture is in any way stagnant. The flowers are of a lilac purple shade, with a yellow eye. The flower stalks are slender and usually have a powdery substance on them. The leaves are oblong and arranged in a rosette, from the center of which the flower stalks spring. The under surface of the leaves is like the flower stalks covered with a silvery-looking "meal."

The accompanying illustration is from a photograph of a pan of plants raised from seed. When treated in this way this primula makes a good pot plant.

W. H. WAITE.



PRIMULA FARINOSA.

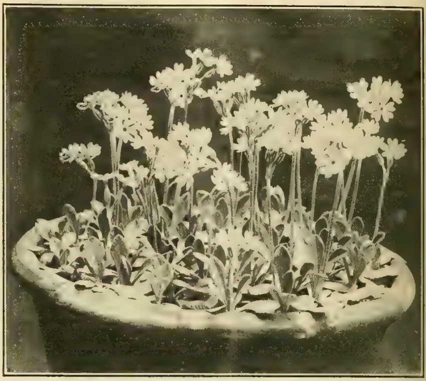
Primula Scotica.

This gem of the British flora is a very near ally to the bird's eye primrose, P. farinosa; in fact, some botanists claim that it is merely a variety; but from personal observation, both in its native state and in cultivating the two plants side by side, I am of opinion that it is distinct enough to be a species. I have never seen it develop the more loose and larger habit of P. farinosa.

One of my hobbies is plant collecting, of which I have many pleasant memories, but none more vivid than when I first saw P. scotica growing in its native habitat in the far north of Scotland. It is a very rare plant, being found only in a few localities and these places are far from the busy haunts of men. The leaves are whitish and covered with a mealy substance on the underside. The flowers are of a rich purple, with a large clear yellow eye, borne on stalks when growing wild which seldom reach more than from one to two inches high, although under cultivation I have seen the flower stalks as long as from four to six inches. The main difference between P. scotica and P. farinosa is the more dwarf and stouter habit of the former. There is also a dwarf form of P. farinosa, namely, P. acaulis. This, although as dwarf as P. scotica, has not the same stout habit. The plant under notice is very difficult to establish in a garden. I have been fairly successful with it, growing it on a piece of sod (it is found in damp pastures), but the best way to establish it is from seed. The illustration is of a pan of seedlings raised by me and grown in a cold frame, the pan being kept plunged to the rim in sand so as to insure an even degree of moisture.

Regarding the raising of hardy primulas from seed, like many other alpines the seed should be sown as soon as ripe; it will thus insure a much better germination than if kept a month or two.

W. H. WAITE.



PRIMULA SCOTICA.

Gypsophilas.

The gypsophilas are a very useful class of plants, good for the rock garden, for the border, and also for cutting. Perhaps the one most generally known is G. paniculata, a very useful adjunct to any florist's garden where decorative material is in demand. Being produced on long wiry stems, the abundant small white flowers are so light and graceful that they can be used in combination with all highly colored blooms, as with their light, feathery sprays they give a mist-like appearance which adds both beauty and grace to any bouquet.

The period of blooming seems to vary somewhat. Usually they flower during July and August, but this season will bring the flowers out in June. They are readily raised from seed, which should be sown in the open in early Spring and the seedlings transplanted the following Fall or Spring into rows or beds as opportunity affords. After this a good annual dressing of manure and keeping the plants clean is about all they require.

G. paniculata compacta is a more dwarf and compact form of the above named.

Two varieties not very generally known are G. Steveni and G. repens monstrosa. G. Steveni, a native of the Caucasus, is a very neat-growing plant, with glaucous green foliage and pure white flowers very much larger than those of G. paniculata, borne in large loose panicles. The flowering stems being nearly 2 feet long, makes it a very useful plant for cutting. It may be associated with other flowers, or used separately. The flowering period is May and June. It is very easily raised from seed, but does not appear to be offered in the trade.

G. acutifolia is very similar to the above.

G. repens monstrosa is quite a new introduction, with foliage and growt very must of the appearance of a ca nation. It must be propagated in th Fall. In early Spring it throws up flowering stem a foot or more high, bu with numerous panicles of good whit flowers equally as large as those G. Steveni, but more numerous, com mencing to flower in early May.

G. Rokejewki is another new-come a tall, coarse-growing variety wit large loose panicles of white flower much later than any of the precedin

G. repens is a lovely plant for th rockery or border. It is of a trailin habit and produces numerous pink an white flowers nearly all Summer.

G. cerastoides is another excelle plant for rockwork. Nicholson's Di tionary of Gardening gives its height 3½ feet, but most dealers in hard plants say it is a low-growing variet Here at Riverton and at Bronx Par N. Y., it is from 6 to 8 inches high, an is an exceedingly pretty plant, wit white flowers veined with red.

All of the above are useful plant They should have good, deep root ru being a very deep-rooted class plants.

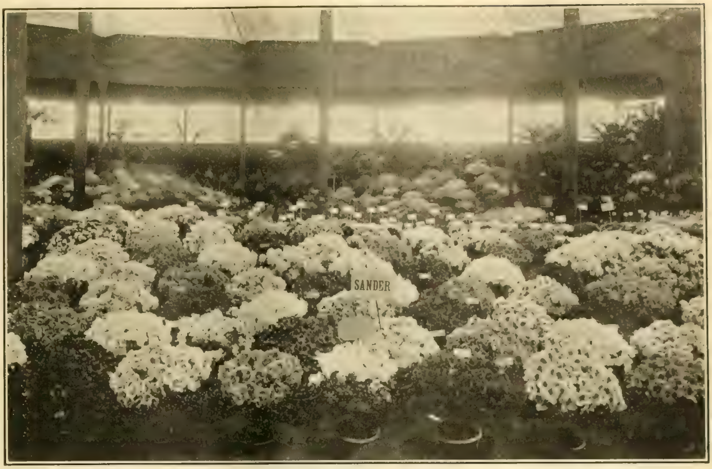
HERBERT GREENSMITH.

Carnations Planted in 1903.

. Crabb & Hunter, Grand Rapid Mich., report as follows: We con menced planting May 1, and finishe May 10. Our varieties are: White- 5,000 White Cloud, 5,000 Flora Hill, 5,0 Glacier; light pink—Morning Glor 5,000, Mrs. Higinbotham 1,000, Genevie Lord 1,000; dark pink—Irene 5,000, Th Marquis 500, Cressbrook, Dorothy, Mr E. A. Nelson 500 each, Mrs. Lawso 4,000; red or scarlet—G. H. Crane 4,00 Mrs. Potter Palmer 500, Estelle 50 crimson—Governor Roosevelt 1,00 General Gomez 200; yellow, variegate —Dorothy Whitney; white variegated Mrs. George M. Bradt 2,000, Gaiety 20 Prosperity 2,000.

Discarded White Daybreak, Hoosie Maid, Mme. Chapman, Alba, Novelt Golden Beauty, General Maceo, an Eldorado. Will try again Harry Fen and J. H. Manley.

Baur & Smith, Indianapolis, bega planting in the field April 25, finish ing the work May 15. They have som 50,000 plants. In white, the favorit varieties are: Flora Hill, Queen Louis Lorna, White Cloud, Alba, Indian Market, John Mitchell, Seedling, He Majesty, Governor Lowndes, Innocenc and Lillian Pond; light pink, Elma Fragrance, Success, Enchantress, Bea trice and Fascination; dark pink, In dianapolis, Freedom, Mrs. T. W. Law son, Mrs. E. A. Nelson, Ethel Crocke President McKinley, Mrs. Theodor Roosevelt and Sibyl; red or scarlet G. H. Crane, America, Adonis, Apollo Mrs. Potter Palmer, The News and seedling; crimson, Harlowarden, Gov ernor Roosevelt; white variegated Stella.



SANDER & SONS' PRIZE WINNING COMMERCIAL AZALEAS AT GHENT QUINQUENNIAL EXHIBITION.

New York Florists' Club.

Notwithstanding the very inclement weather on Monday evening, June 8, a fair attendance of members was present at the regular club meeting. President Troy occupied the chair. After a very full discussion of the subject, those present indicated their preference as to a railroad route to Milwaukee, in the West Shore and its connecting lines, and the committee on transportation was authorized to act accordingly. Invitations were received from Secretary Sullivan, of the Detroit Florists' Club, asking the intending delegates to join the Detroit members and travel with them to Grand Haven, thence across the lake to Milwaukee. The matter was left in the hands of the committee.

A letter was received from Mrs. E. A. Withers thanking the club for the resolutions of sympathy on the death of her husband, James W. Withers, of American Gardening.

The committee appointed to prepare resolutions on the death of F. L. Harris, an honorary member of the club, submitted a report in which they testified to the high personal character, and great ability of the deceased, his self-respect, his love for his fellow-members of the craft and his untold kindness. His professional career should be an example to the younger generation. He built an everlasting monument in the wonderful collection of plants which he had gathered and grown for his employer, and established for himself an enviable fame. He was the truest of friends, one of the foremost gardeners in this country and an ornament to the horticultural profession. A copy of the resolutions was ordered sent to the deceased's family.

Chairman Traendly, of the outing committee, reported satisfactory progress, and had on hand copies of the program of sports, which is a most interesting and varied one. Applications for outing tickets, as well as remittances, should be made early.

Messrs. Lenker, O'Mara and Plumb were constituted a committee of awards to judge some peony exhibits on display.

President Troy appointed as a nominating committee to name officers for the coming year: Messrs. Sheridan, Burns, O'Mara, Plumb, May and Taylor.

It was announced that the bowling fraternity would meet on Tuesday last at Thirty-first street and Broadway for the purpose of getting up a team to represent the city in the Milwaukee contest.

The club adjourned to meet the second Monday in October.

Rare Plants at Ghent Quinquennial.

Our illustration shows a prize group of new and rare plants exhibited by Sander & Sons, of St. Albans, Eng., and Bruges, Belgium, at the recent Ghent Quinquennial Exposition. Some of the plants appearing in the picture are:

Asparagus Sprengeri variegata, a variegated form of this well-known subject.

Saintpaulia ionantha variegata.

Alpinia Sanderæ, a species from New Guinea, with erect stems, ascending, very shortly stalked, glabrous leaves, 4 to 4¾ inches long, ¾ to 1¼ inches wide, rich, shining green, tapering at both ends, regularly striped at close intervals, with broad, white bands diverging from the midrib to the margin.

Heliconia Edwardus Rex, introduced from New Guinea, is one of the most striking of colored foliage plants. It has bold musa-like foliage, with broadly oblong acuminate leaves, pale yellowish green on the upper surface, with a red midrib, and irregular blotches of the same color, the lower surface of a uniform rich crimson. The young leaves are rolled round like a furled flag, so as to show the rich coloration of the under surface.

Polypodium Knightiæ, a graceful Australian fern, with long narrow arching fronds, pinnately divided, with the pinnæ prettily subdivided into linear acute lobes of unequal lengths, and more or less crested.

Dracæna Rothiana variegata, Dracæna Victoria and Ficus pandurata are also included in the group.

PRIZE WINNING GROUP OF NEW AND RARE PLANTS
Shown by Sander & Sons, Bruges, at Ghent Quinquennial Exhibition.

World's Fair Palace of Horticulture

The Palace of Horticulture at the World's Fair at St. Louis is on the summit of Skinker Hill, and is separated from the Palace of Agriculture by 250 feet of model landscape gardens.

The beautiful palace, 400x800 feet in its extreme measurements, is in the form of a cross with a center pavilion, 400 feet square, and two wings, each 204x230 feet. The wings are divided from the center pavilion by glass partitions and the floor of each is 9 feet lower than that of the center pavilion. This difference in elevation produces a monumental effect, which is further heightened by the use in the main entrance on the north front of two towers 150 feet high.

The eastern wing of the building is almost entirely of glass and will be used as a conservatory. A water heating plant is to be installed in the cellar and the pipes are led throughout the wings. Plants will be forced during the Winter and early Spring for outdoor planting, and in the conservatories will be kept tropical plants. At the close of the Exposition many of the valuable plants that would perish from the cold, will be stored therein and kept during the Winter. The glass sides allow the admission of the sun throughout the day. In this wing will be shown specimens of plant cultures grown in different countries for use and ornament, and the forced culture of vegetables and fruits.

The west wing is used for general horticultural exhibits. In the basement of this wing cold storage is provided for the fruit to be exhibited, the cellar having double walls packed with sawdust. In the basement is an unpacking room which will keep the shipping debris out of sight. A gallery is provided on three sides. The west and north galleries will be used as restaurants. Tables will be set so the visitor may observe the exhibits below while at lunch. The gallery is easily accessible by stairs from the center pavilion and from the main floor. The southern gallery will be used as offices for the working force of the Department of Horticulture.

The center pavilion will contain the pomological exhibits, including, according to the classification, pomaceous and stone fruits, such as apples, peaches, nectarines, etc.; citrus fruits, such as oranges, lemons, limes, etc.; tropical and sub-tropical fruits, such as pineapples, bananas, olives, figs, etc., small fruits, such as strawberries, gooseberries, etc., and nuts.

The construction of the building shows no change from the accepted method of the other buildings. The exhibit spaces are covered by trusses, which range in span from 72 feet over the center aisle to 48 feet over the side aisles.

Sander's Prize Azaleas

The accompanying illustration shows the prize-winning azaleas, exhibited by Sander & Sons, of Bruges, Belgium, at the recent Quinquennial Exhibition held at Ghent. The honor won is one of very great distinction as for many years the prize for commercial azaleas has remained in Ghent, this being the first time in a great while the premium has left the "azalea city." The collection included sixty commercial varieties of azaleas, and Sander & Sons are to be congratulated on their great success, which more loudly than words proclaims the merit of the firm's products. We are indebted to Mr. Dimmock for a copy of the picture reproduced.

Annandale (N. Y.) Rose Show.

The thirteenth annual Annandale Rose Show was held on Wednesday and Thursday, June 10 and 11, at Annandale, N. Y. The show as usual was given in a tent on the campus of the college. The patronesses were Miss Cruger, Miss Julia Barton Hunt, Mrs. John N. Lewis, Mrs. Douglas Merritt. Mrs. L. P. Morton and Mrs. Geraldine Redmond. George Saltford, the curator of the show, was ably assisted by Richard Lewis, of Ossining, N. Y., formerly gardener for Miss Cruger. The judges were Messrs. R. W. Allen, John N. May and Patrick O'Mara.

The show improves annually in quality and quantity, and this year it was a distinct advance over previous efforts. Despite the unfavorable season, the rose exhibits were excellent, those from Mr. Archibald Rogers (James Horrocks, gardener), were noticeably fine. Following are the principal exhibits and prize winners:

The group of stove and greenhouse plants from Col. J. J. Astor (H. A. Deal, gardener), carried off first prize. A fine group from Hon. L. P. Morton (Thos. J. Talbot, gardener), unfortunately arrived too late for entry. A specimen adiantum and a standard azalea (Souvenir du Prince Albert), from Col. J. J. Astor were conspicuous features of the show.

A dinner table decorated by H. A. Deal carried off first prize uncontested. No covers were set or chairs placed, and it looked meager, but it was according to schedule. The center-piece was too bulky and too high, a glaring and too common fault in such decoration.

The patronesses' prize—a silver cup—for best twelve vases of roses was won by Mr. Winthrop Sargent (Frank E. Witney, gardener). The silver cup, 1901, for best 24 distinct roses, was carried off by Mr. Archibald Rogers (James Horrocks, gardener), with a fine exhibit. The Peter Henderson & Co. prize was won by Mr. F. R. Newbold (Thomas Bell, gardener), for six vases of roses, six of each variety. Mr. Newbold also received a deserved certificate of merit for vases of roses not in competition.

Mr. Irving Grinnell (John C. Galvin, gardener), was awarded first prize for best vase of Mme. Gabriel Luizet; Col. J. J. Astor being second. First prize for vase of Paul Neyron went to Dr. G. N. Miller (H. Asher, gardener), F. R. Newbold being second.

The medal offered by the American Rose Society for the best general showing of roses was easily carried off by Mr. Archibald Rogers (James Horrocks, gardener). He also won the Cruger prize for the best six vases of blush roses. Several certificates of merit were awarded to Miss Cruger for exhibits not in competition. Mr. Archibald Rogers also carried off first prize for the best twelve roses on boards.

The Dutchess County Horticultural Society offered two prizes for the best collection of herbaceous flowers, first prize being awarded to Mr. Winthrop Sargent (Thomas Bell, gardener). A grand collection from Dr. G. N. Miller (H. Asher, gardener), was disqualified because of the presence of swainsona, roses and sweet peas in the collection. A certificate of merit was awarded to Mr. Warren Delano, Jr. (J. A. Galvin, gardener), for a grand collection of digitalis and campanulas, also for sweet peas and roses.

First prize for collection of vegetables went to Mr. Archibald Rogers and second to Hon. L. P. Morton (Thomas Talbot, gardener). First prize for best three heads of cauliflower, a magnificent exhibit, went to Mr. Warren Delano, Jr. (J. A. Galvin, gardener). A display of wild flowers and cultivated plants also "made up" designs by children was very interesting. The exhibit of plants by amateurs was also very creditable, many well grown plants being noticed.

The attendance was very good and included most of the wealthy residents in the neighborhood.

PATRICK O'MARA.

EXHIBITIONS.

The preliminary schedule of the third annual exhibition of the New Haven County Horticultural Society has been issued. The show will occur November 10-12, inclusive, in Music Hall, 115 Court street, New Haven, Conn. Thos. Pettit, 316 Orange street, is secretary.

Philadelphia.

News of the Week.

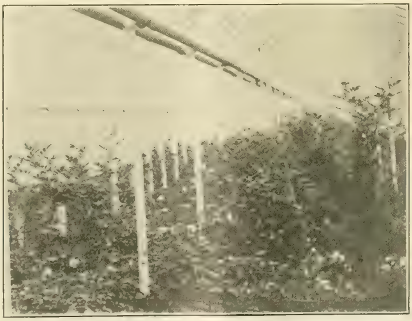
The outing of the Florists' Club to Samuel C. Moon's nurseries, at Morrisville, takes place next Wednesday, June 17. Arrangements have been changed from the previous notice sent out. The program is now to go by steamer Columbia—leaving Chestnut street wharf at 9:30 a.m.—to Bristol, thence to Morrisville by train; returning by same route. As now arranged, a large crowd is expected. Be one of the number, and have a good time.

VIEW OF ESTABLISHMENT OF OTTO GRUNDMANN, SECAUCUS, N. J.

O.B.GRUNDMANN.

William McKissick, of Leo Niessen's establishment, was married on Wednesday to Miss Bessie Chaundy, of Colwyn, Va.

Recently many of the growers have again been going around from store to store with their boxes selling flowers. Several of the commission men report that it is difficult to maintain prices now that this is being done. If it is a fact, it is a great pity that more unity does not exist among the growers for the welfare of all.



INTERIOR OF CRIMSON RAMBLER ROSE HOUSE OF OTTO GRUNDMANN, SECAUCUS, N. J., AT EASTER.

A large number of bedding plants is yet to be seen around—too many for this date. Probably the recent rains may help to move some of them.

A severe thunderstorm visited this city on Wednesday. The rain came down in torrents for fully an hour and a half. There was considerable hail in the central portion of the city, but up to time of writing no reports of damage had been received from growers.

At Garretford, James Verner has a house of rose Kaiserin Augusta Victoria planted for Summer cutting. William Munro, who has the Anderson place, has three houses planted, one with Kaiserin for Summer.

Charles A. Knapp is now doing considerable landscape work. The last operation was a polo field at Whitemarsh.

The Floral Exchange cut 40,000 roses during May from the large house on their place at Edgely, Pa.

The outdoor roses on several private establishments were at their best June 6 to 9. The rose exhibition was, therefore, too early for some gardeners.

DAVID RUST.

Buffalo.

News Notes.

The bedding plant business is enjoying good patronage, despite the complaints of some grumblers, and a scarcity of geraniums for the demands is noted in cases.

Recent improvements among the East Side florists stores indicate a pleasing increase and development of business. Miss Rose L. Reinhard, formerly of 349 William street, has moved one door further west, now occupying a newly-fitted-up corner store of ample width, which includes the finest of plate glass show windows, with the floor tiled. Other fittings are in harmony, and attest to the allied energy of this successful establishment.

Across the way, at 352 William street, is Schoenhut, who owns a good-sized property, recently enlarged by adding growing or supply houses as supplementary to store facilities. Such now include two houses of one hundred feet long, and a third constructing. A miscellaneous stock, besides palms, ferns, etc., and forcing of bulbs here beget attention. A stock of Summer blooming lilies in variety is unusually fine and perfect. While the bulbs were no doubt of good selection, present conditions also attest to the skilled attention of Charles Roesch, the grower in charge, formerly in the employ of William Scott.

George McClure, locally known as a landscape gardener of more than ordinary ability, finds himself fully occupied with plenty of commissions and business right within the confines of this city.

W. A. Adams, now head store man at Anderson's, holds a veritable cinch on all business emanating from any political classes or the City Hall. His long-time popularity among the business occupants of the imposing structure remains proverbial and his "pull" is a substantial one.

Daniel B. Long visited Detroit and Cleveland last week, stopping incidentally at Toledo also. He inclines to dilate on the pleasantness of the boat trip between Buffalo and Detroit, the hours taken up with same being most agreeable, the service commendable in every way. To those who are going to the S.A.F. convention from points hereabouts and further East, this part of the trip, as outlined by the enthusiastic and openhearted Detroit contingent, would appeal most strongly to anyone familiar with the enjoyment to be gained, compared to rail travel.

J. F. Cowell, of the City Park, is to take active part in the meeting of State Park Superintendents at Albany later in this month, and leave of absence has been officially granted to him.

VIDI.

Hartford, Conn.

Club News.

The Florists' Club held a well attended meeting Tuesday evening, it being the last indoor meeting until Fall. A number of invited guests were present. After the business meeting a social session followed. Refreshments were served, the officers of the club being the hosts. It was voted to suspend the regular meetings for the next three months, and during this time meetings will be held at the call of the president. Arrangements are under way whereby a joint outing of the Hartford Florists' Club, the New Haven County Horticultural Society, New London club and the Bridgeport club will be held in the near future. One new member was voted in.

J. F. Huss made a fine exhibit of outdoor flowers and gave a very interesting talk on them.

Robert Karlstrom, gardener at Elizabeth Park, brought in the following collection of rhododendrons: Boule de Neige, Parson's gloriosa, album elegans, Betsy Parsons, John Waterer, Everestianum, Caractacus, delicatissimum, astrosanguineum, Blandyanum; also fourteen varieties of azaleas and a very striking and beautiful poppy, name unknown. Mr. Karlstrom gave a talk on this exhibit.

A certificate of merit was awarded to Elizabeth Park Nurseries and to Mr. Huss for their exhibits. Judges for the evening were: Messrs. G. A. Parker, W. W. Hunt, and Hans J. Koehler.

Mr. Koehler, who is forester at Keney Park, and one of the charter members of the club, is to leave the city. This announcement was heard with much regret. Mr. Koehler was made an honorary life member of the club.

The resignation of Mr. Koehler from the Keney Park force was received with deep regret by the trustees and other officers of the park, and his fellow-workmen as a token of their respect and friendship presented him with a number of books.

J. F. C.

New Greenhouses at Secaucus, N.J.

Our illustrations show the establishment of Otto Grundmann, of Secaucus, N. J. S. Jacobs & Sons, Brooklyn, N. Y., are building for him another house 150 x 24 feet, 16 x 24 glass. This house will be completed by the 1st of July, and will give Mr. Grundmann a range of 20,000 feet of glass built in one year.

Review of the Market

NEW YORK. There has been no change for the better in the cut flower trade since our last report, in fact, conditions are worse in some respects, particularly in the case of roses and carnations. Ordinarily, these two staples have diminished greatly in supply by this time, but such has not happened this year. Both are coming in heavily, and while a great many of the roses are covered with mildew, and many of the carnations are small and inferior in quality, all help to glut the market and keep prices below the normal. Some rose growers are shipping every other day only and just now, when buyers are both scarce and fastidious, it is a difficult matter to get rid of such stock at any price, as it is off color, and too far open to be serviceable. American Beauty are in in great numbers, and some phenomenally low sales have been recorded within the past few days.

Daffodils that have been grown from retarded bulbs are a feature in the market, and, if there was any business, they would be appreciated. As it is, they are a drug in the hands of the dealer, and have no fixed value.

Lily of the valley is offered at lower figures than have been ruling for many weeks, but too much of this stock is coming in for the limited demand.

Peonies are not nearly so plentiful, and the demand for them is probably better than for any other flowers. Sweet peas are both plentiful and of many grades. Some of them do not bring more than one cent a bunch, while others will realize five or six times that amount. Lilies can be had at from $2.00 to $3.00 a hundred, and there are plenty of them. Gladiolus and antirrhinum are not so much in evidence this week. Smilax has taken a drop in value to six and eight cents a string. No change is noted either in adiantum or asparagus.

PHILADELPHIA.—Any quantity of flowers, and not so much demand is the condition this week. The only thing that will prevent a glut is the fact that most growers are now tearing out old roses and preparing to plant for next season. The quality of all flowers is gradually depreciating. It is difficult to quote prices, as they vary so much. First-class American Beauty roses are being sold at $1.50 and $2.00 per dozen, while selected stock for shipping is held at $3.00. White roses are yet in good demand. Peonies are about over. S. S. Pennock reports having done a good business with these flowers this season; the prices obtained were good, and a better demand was noticed than last year. The flower market also did well on peonies, making an average of $6.00 per 100. Lily of the valley is yet in good demand, selling at from $3.00 to $5.00 per 100.

There is a fair demand for white carnations; other varieties are not moving well. DAVID RUST.

BOSTON.—Business this week at the market and commission houses was rather quiet up to Wednesday, when it took a big slump. But with the retailers there has been more or less going on in the line of decorations for commencements, which began earlier than usual; also weddings, but the work is rather light. The market is very well stocked with seasonable flowers. Roses are becoming poor, except Kaiserin Augusta Victoria, which are very fine just now, and prices are low. Carnations hold out of good quality, but are greatly in overstock and move slowly at low figures. Peonies are plentiful, but find little demand at $3.00 to $4.00 per 100. Sweet peas are now coming in from outdoors, but do not move very fast; the price is 15c. to 35c. per 100. F. J. N.

BUFFALO.—More rainy and favoring growing conditions recently inclined to further increase the visible supply of blooms, and the quality has kept well for this date. With business running only moderate, the daily supplies this week are more than ample. Peonies are in their prime, locally, and compete for favor with roses and carnations, the latter especially being numerous. Both are placarded in some of the retail stores at special sale prices. VIDI.

CINCINNATI.—The rainy season is now past, at least, so says the weather man. Roses are deteriorating very fast, and mildew is getting in its work. American Beauty still holds up better than other roses, both in quality and price: extra bring $3.00 per dozen; medium, $2.00 to $2.50; fair, $1.00 to $1.50; short, $2.00 to $3.00 per 100. Bride and Bridesmaid, $2.00 to $5.00 per 100. Liberty, La France, Golden Gate, about the same price. Sweet peas are not coming in rapidly and the stems are very short; the price is 25c to 35c. per 100. Carnations are still holding out best of all, and are selling at $1.00, $2.00 and $3.00 per 100. Smilax brings 15c; eastern ferns, per 1,000, $1.50; western, $1.25. The new eastern stock is very fine; much better than the western being not nearly so coarse. E. G. G.

CHICAGO.—Trade, taken as a whole, was never so unsatisfactory as now, both in the wholesale and retail lines. For the month of June, so far, shipping trade has been rather unsatisfactory, that is, to Southern and Southwestern points. Shipping direct is out of the question on account of the floods. St. Louis is practically cut off from all points, so far as shipping perishable goods is concerned. New Orleans can only be reached by way of Chattanooga, and the first day of the present week the American Express Company refused to accept goods under any consideration. If conditions continue as they are, a great deal of stock will find its way to the rubbish barrel. American Beauty are selling at from $2.50 to $3.00 per dozen for the best; other grades are bringing from $4.00 per 100 to $1.50 per dozen. Bride and Bridesmaid are coming in in fine condition and the color is extra good for this time of the year, they are realizing from $3.00 to $6.00 per hundred. Some fine Meteor are to be seen, also Golden Gate; both selling at from $3.00 to $8.00 per 100. Kaiserin Augusta Victoria realize $3.00 to $8.00. Mme. Abel Chatenay are exceptionally fine, and sell at from $8.00 to $10.00 per 100.

Carnations are coming in in immense quantities and some extra fine stock is to be seen in several places. The price on this latter class is from $2.50 to $3.00 per 100, while the inferior grades are jobbed off at almost any figure. Some sales are reported as low as 40c. per 100. Peonies are arriving in large quantites. Dark red and white, which are not overplentiful, are selling at a good figure, while the other colors are hard to move at prices satisfactory to the grower. The values on the latter stock average from $1.25 to $8.00 per 100.

Callas and longiflorum lilies are not over abundant. Some Cape jasmines are still to be seen, selling fairly well.

Sweet peas are abundant, and in some cases are hard to move. Good ones find ready sale at a good price.

Lily of the valley is in sufficient quantities to meet all demands, with the price at from $3.00 to $4.00 per 100.

Asparagus is selling well at from $35.00 to $50.00 per 100. A. Sprengeri is more plentiful, and is bringing from $2.00 to $5.00 per 100. Hardy ferns go at 25c. per 100; adiantum at from 75c. to $1.00 per 100; smilax, $1.50 per dozen. R. J.

ST. LOUIS.—At this writing, June 9, our commission men are having a hard time getting in their shipments, as trains are delayed by the great flood on the East side. There is no telling how long this state of affairs will last. No doubt it will hurt the trade a great deal.

Business has been very good of late; some large wedding decorations have been reported, which used up considerable first-class stock. A few more for this week, with school work, should keep the trade on the jump all week.

Our nights have been very cool of late and some of our best rose stock comes in quite mildewed. Bride and Bridesmaid are mostly affected by it, still they sell well, as stock is somewhat scarce. These roses bring from $3.00 to $6.00 per hundred. Souvenir du President Carnot, Golden Gate, Liberty and Meteor are selling at the same figure. With little or no mildew on them American Beauty, the best long ones, bring $3.00 per dozen, and from that down to $1.50 per dozen; plenty of short ones are in at $5.00 and $6.00 per hundred.

The market is, and has been, short on good carnations. A good quantity of common small stock is arriving, but it does not sell well, bringing $1.00 and $1.50. The best run as high as $2.00 per hundred. The carnations mostly looked for are Flora Hill for white and Ethel Crocker for pink. No good red is in the market.

A few callas come in, going at 5c. and 8c. each. Lily of the valley is very scarce just now. Gladioli are not yet plentiful. Peonies are all cut out. Cape jasmines are plentiful at 50c. per hundred. Sweet peas are still selling well at 50c. per 100. The rainy days of last week spoiled a great many of sweet peas; they come in watersoaked. The light shades are the best sellers.

New fancy ferns are in the market and the trade is laying in a supply of them. All greens have a good call. Galax and smilax are being much used for decoration work. The latter is selling at 15c. to 18c. per string. ST. P.

INDIANAPOLIS, IND.—June so far has been a satisfactory month with the florists. There has been no rush of business but a firm steady demand for all kinds of stock. The quality of roses is, as a rule, poor; but the demand has been quite up to expectations. Bride and Bridesmaid have sold at $1.00 to $1.50 per dozen. American Beauty are moving slowly at a retail price of $2.00 to $3.00 per dozen. Meteor are entirely off the home market; they do not sell well when Liberty is to be had.

Carnations wholesale at $1.50 to $2.00 per 100 and retail at 50c. to 75c. per dozen. There is a surplus of carnations, and many go to waste.

Sweet peas are plentiful at 35c. per 100. The pink ones are mostly in demand at 25c. per bunch of thirty.

The bedding season is nearly over and all of the growers are well cleaned up for so early a date. I. B.

GRAND RAPIDS, MICH.—A spell of torrid weather that threatened to annihilate carnation plants in the field, that cooked carnation buds open when not wanted, that spread terror in the hearts of the faithful for fear the crop would be off at Decoration Day, was followed by a week of rainy, raw, cold weather. It was with difficulty that flowers kept for even two days without showing a tendency to go to sleep. The three days preceding Memorial Day there was no rain, yet it continued raw and cold. In spite of all these adverse conditions, the cut of carnations was the largest ever known at this season. Roses were in fair crop, but scarce. Carnations were all used up Friday by shipping orders.

The best of the bedding season is over, yet straggling orders are continually coming in and will do so for the remainder of the month.

Prices are better and firmer than last year and plants in bloom and cut flowers sold out closer.

Prices: 35c and 50c per dozen for carnations; roses, $1 per dozen; lilies, $2; peonies, $1.50 per dozen. Outdoor shrubbery was not in bloom, owing to the backward season.

H. Bunyard was a recent visitor. Nothing like his cold storage lilies to cool a fellow off. G. F. C.

WORCESTER, MASS.—For Memorial Day the florists booked orders as early as Easter, and only the dry spell brought any shade of disappointment. Without exception, the florists reported a scarcity of flowers. Lilacs, that hitherto played a prominent part in the decorations, came and went before their usual time. Most of the wild flowers were dried up, but even then, with an unfavorable season, the trade was heavier than ever before. The G. A. R. Post of this city found it necessary to make 1,250 wreaths against 1,200 of one year ago. The shortage of stock was very prominent here also, but the school children bravely responded to the call and sent in wagon loads used in their school decorations. The G. A. R. have a grievance. Many of the leading stores lost sight of the main object of the day and profusely decorated their stores - not in memory of the fallen heroes, but for a horse show. C.

DENVER.—Trade for Memorial Day was greater than that of previous years. While town trade was good the great bulk of business was done in shipping. Stock looked plentiful at the beginning of the week, notwithstanding the scarcity of outdoor material, though by Friday a few snowballs and lilacs did show up; but not enough to cut any figure. Carnations and roses were sent in in good big lots, but by Friday night flowers of all descriptions were very scarce. Saturday morning, though, saw the stores fairly well filled. Glauber, of Montclair, Colo., struck it nice with a good big supply of stocks (ten week) and some giant candytuft, which helped out very much in mixed cut flower lots. Sweet peas were in good supply, and found ready sale. Plant sales during the week were good, but the cold weather, no doubt, hurt the trade considerably. P. S.

PITTSBURG.—Trade in cut flowers is fairly good and stock plentiful. Prices are low enough to suit everybody. Plant trade is still good and will continue so for another week, as considerable planting is yet being done. Cannas are about the only plant that is abundant, but too many were grown. Last year they were scarce, and so everyone increased his stock this season. E. C. R.

SAN FRANCISCO.—Memorial Day business this year was a record-breaker. There was no dearth of flowers and no dearth of buyers. Phenomenally good has been the shipping trade for grave decorations. The principal points of consignment were Nevada, Utah and Arizona, and numerous mountain and valley towns in Eastern and Northern California. ALVIN.

NORWALK AND SOUTH NORWALK, CONN.—The Spring and Decoration Day trade has been exceptionally good this year and very fair prices for both plants and flowers were realized. R. G. Hanford had a big rush on cut flowers Memorial Day morning and many orders had to be refused. Everything in the shape of a flower was sold out. The sale of bedding plants was, if anything, in excess of former years. On Tuesday, Mr. Hanford was very busy with quite a large wedding decoration, palms, ferns and peonies being used in great profusion.

Peter Gingue filled thirty six vases on Thursday and Friday of last week and reports a very large Spring trade.

The Smith Estate, of South Norwalk, have been exceptionally busy this year with box and vase work, and have as much bedding out work as they can attend to. P.

BRIDGEPORT, CONN.—The Spring trade in this city has been exceptionally good, especially when the many strikes are taken into consideration. The trolley strike has not yet been settled and there are labor troubles affecting almost every line of business.

Decoration Day brought a lively demand for both plants and flowers, and good stock soon ran short. Many hydrangeas were seen in the different stores and sold very well at moderate prices. The best geraniums retailed at $1.50 per dozen in 4-inch pots, Jean Viaud, Alphonse Ricard and S. A. Nutt being most in demand. Carnation flowers brought 50c. per dozen for ordinary kinds, a few of the fancy varieties bringing 75c. and $1.00. The carnations that are planted out are beginning to show the effects of the continued drouth, and all outdoor plants are suffering.

Reck & Son had the Grand Army order, and also report a very good business. They sold out of geraniums and had to buy to fill their orders. They have about 30,000 carnations planted out, but it takes considerable care and labor to keep the plants from dying for want of water. Through the medium of The Florists' Exchange, they have cleared out their large stock of ivy and have had to cancel several orders.

James Horan had a large quantity of 8 and 10-inch pans of geraniums made up for Decoration Day and they sold very readily at from 75c. to $1.00. The demand for bedding plants and box and vase work with this firm was greater than in previous years.

Keith & Jackson, who recently bought the retail branch of George Whitehead's business on State street, are doing a lively trade, which is constantly increasing. They make a specialty of landscape gardening.

Mr. Whitehead is devoting the whole of his time to the wholesale plant and flower business at his establishment in Southport.

James E. Beach has over 50,000 carnations out in the field. His young rose stock is looking in good shape. P.

Indianapolis, Ind.

News Jottings.

Between four and five thousand coreopsis were sold for the Shortridge high school commencement this week. The class color being yellow, the coreopsis was the only yellow flower obtainable.

This section of the country is experiencing the worst series of thunder and windstorms in years. Sweet peas and other outside flowers are showing the effects of the continual downpour of rain.

Saturday afternoon a storm of unusual velocity struck this city. It seemed to reach a climax in the east end, where Bertermann Brothers' greenhouses are situated. Two houses were torn out of the ground and released to assume their normal position with the exception of large variations in the purlins. The ends were entirely torn out, and many of the sash bars were broken in two. In John Bertermann's residence, a hundred feet away, could be seen small particles of glass driven clear through the weather boardings. This seems almost incredible, but the glass remains there as proof. About one hundred square feet of shingles were torn from the residence.

One noticeable part was that in the greenhouses where the damage was done, the ventilators and doors were tightly closed. In several other houses, a few feet away, no damage was done, but the ventilators and doors were partly open. The wind was accompanied with a heavy hail storm.

Business at Tomlinson Hall market has been quiet this week. The growers there are looking forward with interest to the new market house which is being erected. A large part of the space in the new building is to be used by the florists.

The committee of the Indiana State Florists' Association on picnic is preparing for an elaborate one. It will be held about the middle of July, but the place has not been fully decided on. I. B.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.

WHEN you cannot fumigate with our **Fumigating Powder** you can apply our **Black Stuff Fine** direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5-pound package for nothing if you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

ROSES.

Cultivation of Outdoor Roses.

Read before the New Jersey Floricultural Society by Andrew Grierson, gardener to Mrs. Hicks-Arnold, of Portchester, N. Y.

The most popular roses for garden planting are those of the hybrid perpetual class (although the most of them only make one large display in June), owing to their hardiness and large and handsome flowers and their strong, rich fragrance, especially the crimson varieties. For the successful cultivation of this class one must provide an open situation, free from all shade, and well-drained ground; and if the soil is a strong clayey loam, so much the better. The ground must be trenched to at least a depth of two feet, and if you mix some of the lower with the top soil it will do all the good in the world; it seems to put new life into the top soil and the roots will take a hold of it right away. You will require lots of good cow manure if you can get it; if not, then horse manure will do. I always put a layer of manure at the bottom of the trench, then some soil, and afterward a good dusting of ground bone, such as is used in the rose beds inside; then more soil, another layer of manure and another dusting of bone near the surface.

There is a difference of opinion among gardeners as to when to plant roses. I always plant in the Fall, even should it run to the new year. One is so much ahead in the Spring; it gives the plants a chance to make roots during the Winter and they are ready to go right ahead in the Spring. I think roses that have been put out this Spring will have had a pretty bad time of it. From the first of November to the last of December is my planting time, and I always try to get as well ripened wood as I can.

The distance to plant varies with the different varieties, the Baroness class - Captain Christy, Pride of Waltham and others of that type -will do very well fifteen inches apart, Paul Neyron, Mrs. Sharmon Crawford, Ulrich Brunner, Prince Camille de Rohan will take two feet; and the very strong growers, such as Jacqueminot, Captain Hayward, Marquis de Castellane, Mme Gabriel Luizet, Duke of Edinburgh and Margaret Dickson, will take at least three feet.

About the kind of stock to plant: I prefer budded plants, and for stiff soil the briar stock; for light soils I would take the manetti. I don't believe one can get as good plants on their own roots (except of a very few varieties) as he can by using budded stock; at least, that has been my experience. One advantage own-root plants have is, that you don't have any suckers coming up and killing your plants, which is the cause of a good many people wondering why their roses don't bloom, although they grow finely.

In planting roses, should they be budded, always put the bud from three to four inches below the ground level. That protects the bud, and the plants will make roots from there also. After planting and as soon as the ground begins to freeze, I put a mulch of strawy manure around them. That both protects the plants and gives them a chance to make roots as long as possible. Before doing so, however, should there be any field mice around I take some oats, dampen them and put enough Paris green to color them, then scatter the oats over the bed, and put on the mulch. In some places mice do a great deal of damage by barking the plants.

About the first or middle of March take off the mulch and prune the roses. To get large flowers you require to prune pretty hard, cutting away all weak wood at the same time. Should you wish to make a big display with some plants that have good strong shoots, just peg these down, and you will have something to look at.

Varieties for pegging are: Ulrich Brunner, Mme. Gabriel Luizet, Gloire Lyonnaise, Margaret Dickson, Captain Hayward, Climbing Captain Christy, Clio, Grand Mogul and Salamander.

The following are some of the best varieties for this climate: White, blush and flesh—Clio, Margaret Dickson, Boule de Neige, Climbing Captain Christy, Coquette des Blanches, Mabel Morrison, Merveille de Lyon, Violette Bouyer.

Pink—Baroness Rothschild, Jennie Dickson, Mme. G. Luizet, Mrs. John Laing, Mrs. Sharmon Crawford, Queen of Queens, Spenser, Mlle. Marie Finger.

Rose—Countess of Roseberry, Heinrich Schultheis, John Hopper, Magna Charta, Marquis de Castellane, Paul Neyron, Pride of Waltham, Victor Verdier.

Light crimson—Alfred Colomb, Captain Hayward, Duke of Teck, Marie Baumann, General Jacqueminot, Gloire de Margottin, Tom Wood, Ulrich Brunner, Suzanne Marie Rhodocanachi.

Dark crimson—Duke of Edinburgh, Earl Dufferin, Fisher Holmes, Horace Vernet, Louis Van Houtte, Mme. Victor Verdier, Prince Arthur, Victor Hugo, Star of Waltham.

Maroon and purple—Abel Carriere, Baron de Bonstetten, Black Prince, Grand Mogul, Prince Camille de Rohan, Reynolds Hole, Rowland Hill, Xavier Clibo.

Next in importance to the hybrid perpetual come the teas and hybrid teas, with their lovely forms and coloring. There is some wonderful coloring in this class of roses. It is a class which is not grown nearly as much as it deserves to be. Most people think the plants too tender to stand our Winters; but this is not the case. With a little care and trouble the most delicate of them will come through the Winter all right. All they need is a covering of something. The best article that I have found for the purpose is fresh, dry leaves, which are easy enough to secure in the Fall. In covering up the plants peg down the long shoots. A stone, or anything else will do to keep the shoots near the ground; then put on as many leaves as will cover the plants nicely. You can use branches, wire netting, or such like, which will keep the leaves from blowing away. In the Spring when you remove the leaves I think you will find most of the plants alive.

Of course, tea roses require a more open soil than the hybrid perpetuals, and it cannot be made too rich, if you want good flowers and to have the plants bloom throughout the whole season, as they will do, if properly treated. Tea roses can be planted much closer than the hybrids—about a foot apart each way will do for the most of them. There are a few varieties that need more room, but the majority will grow well, afforded that distance.

Where practical it would be best to plant each variety separate, say in lots of 6, 12, 25 or 50, or use two or three varieties that will go together in the same bed. As regards pruning this class, they need not be cut in quite so hard as the hybrid perpetuals. Cut out all weak wood and shorten the strong shoots about half. The climbing varieties require very little pruning, and when the old canes have given out, cut them right down to the ground, so as to secure young canes from the bottom.

As regards varieties that are suitable for a bed, I would place Maman Cochet at the head. The plant is one of the strongest growers in this class; the foliage is always, or mostly, free from mildew, and the flowers are produced freely and are of the largest size. Next comes Gustave Nabonnand, pale rose, shaded yellow. The flowers are not as double as some, but they are produced throughout the whole season, and I have never seen mildew on this variety. This sort, I think, is as good as Maman Cochet. Princess de Sagan is the best crimson maroon tea rose that we have; it makes a lovely bed. The flowers are very bright and show off very well indeed with the dark green foliage.

20,000 BEST COMMERCIAL CHRYSANTHEMUMS.

Ready to ship. From 2¼ in. pots.

Eaton, Appleton, Ivory, Bonnaffon, Maud Dean, Yanoma, Shrimpton, Murdock, Mrs. Jones, and many more, $2.25 per 100; 300 for $5.00, our selection.

AMERICAN BEAUTY ROSES

We have a fine lot in 2 1-4 inch pots, just ready for shifting or planting, which we offer at

$7.50 per 100; $60.00 per 1000.

From 3½ in. pots, $12.00 per 100; $100 per 1000.

These plants are grown from double-eyed cuttings made from select blooming wood, the same in all respects as we use ourselves. We grow nothing but American Beauty Roses, and both our plants and our blooms are recognized as having no superiors.

These Plants will be Carefully and Lightly Packed, and We Know will Give Satisfaction.

F. R. & P. M. PIERSON, Scarborough-on-Hudson, N. Y.

Mention the Florists' Exchange when writing.

Belle Lvonnaise is on the Gloire de Dijon type—deep canary yellow. It makes a good bed, only you have to look out and get as much old wood as you can. Reve d'Or, an extra strong grower; the foliage is almost the finest and the plant retains it throughout the season. The buds and flowers are very fine—far better than those of the old Gloire de Dijon. This rose should be given as warm and sheltered a place as possible. Enchantress, creamy white, buff center, one of the new roses and very promising. Hon. Edith Gifford, flesh and white; a good strong grower, giving fine blooms.

The following are some the best teas: Sunrise, White Maman Cochet, Sunset. Souvenir de Mme. Levet, yellow and orange; Souvenir de J. B. Guillot, nasturtium red and coppery red, fine and distinct; Souvenir Catherine Guillot, copper and orange (good); Princess Beatrice, yellow; Marie Van Houtte white, yellow and rose; Marie de Orleans, Mme. Lucien Linden, Mme. Hoste, yellow; Mme. Jacques Charreton; Mme. Falcot, apricot yellow; Mme. Chidane Guinosseau, canary yellow, fine bluds; Mme. Charles, bright apricot; Jean Pernet, bright yellow; Golden Gate, Francois Kruger, coppery yellow and peach; Devoniensis, pale yellow, fine; Corinna, flesh and rose; Countesse de Madillac, rosy flesh and copper; Beryl, golden yellow; Anna Olivier, flesh, rose and salmon; Amazon, yellow; Mme. Eugene Verdier, Mme. Berard, Dijon color; Gustav Rigis, canary yellow, semi-double, fine in bud; William Allen Richardson, yellow and orange; Mme. Pierre Cochet, like the last named, only better; Mme. Ada Carmody, new, ivory white, yellow and pink; Mme. Ravary, golden yellow; Irish Beauty and Irish Glory, single white and white marbled pink; Sulphur, sulphur yellow; Queen Olga of Greece, rosy pink, shaded yellow; Mme. Antoine Mari, Mme. Louis Poucet and Mme. Vermorel.

(To be continued.)

HARDY AND OTHER ROSES from 4 or 5 in. pots at 9 cts., fine clean plants on own roots. Clothilde Soupert, Coquette des Blanches, Coquette des Alps, La Reine, Gen. Jacqueminot, La France, Crimson and Yellow Rambler, etc. Large flowered **Clematis**, finest purple, white, lavender and pink sorts, 2-year, from in. pots, 18 cts.; 1-year from 3 in., 9 cts.; **Clematis Paniculata**, from 5 in. pots, 10 cts. Extra, from in., 25 cts. **Ampelopsis Veitchii**, from 3 in. pots, 5 cts.; from 4 in., 10 cts.; from 5 in. pots, 5 cts. Packing free for Cash.

W. H. SALTER, Rochester, N. Y.

New York.

News Notes.

This city and the surrounding country has been favored with refreshing rains for the past four or five days, for which everyone is extremely thankful.

Business among the retail dealers is not what it ought to be for the month of June. Usually, during this month, there is a fair run of decorative and steamer work; but this year the volume of trade is falling far below the average.

J. H. Small & Sons have one of their Broadway store windows tastefully decorated with cactus plants, in miniature Japanese pots, which proves quite an attraction.

Peonies were exhibited at the meeting of the New York Florists' Club on Monday night. Aside from two flowers shown by Beaulieu, the exhibitors were Charles Lenker, Freeport, L. I., and C. W. Ward, the Cottage Gardens, Queens, L. I. Mr. Ward displayed several very fine varieties, all under number, receiving a certificate of merit.

Mr. Lenker showed a large bunch of a variety, named Fragrance, of a pleasing cerise color. He received honorable mention. Beaulieu also exhibited pansy blossoms of the Mme. Perret strain; and a model of a device, with three rollers, for placing at the corners of paths or benches, over which rubber hose can be pulled avoiding entangling or breaking the hose.

The program of sports for the annual outing of the club on July 1, is out, and a copy has been mailed to each member of the club. The advertising columns of the program have been very liberally patronized by the trade, and all advertisers who wish extra copie can obtain them by applying to F. H Traendly, 38 West Twenty-eighth stree

Since the program went to press a additional ten dollar prize has bee donated by John I. Raynor, 49 Wes Twenty-eighth street. The prize is of fered for a bowling match, open to al seven dollars going to the player mak ing the highest score, and three dollar to the second highest scorer.

Joseph Mallon, one of the Fulto street florists, of Brooklyn, is quite lover of fast horses. He is also th owner of a horse that is considere speedy, and on Saturday last Mallon' horse, which is named Collette, wa matched against four others in a rac for $500 and side bet of $10,000, the rac being run on the Parkway Drivin Club's track at Gravesend, winner t take all. The race was run in heats and Collette came in for second hon ors, much to the disappointment of th owner and store men, who had all be heavily on the result.

C. W. Ward, Queens, L. I., has bee appointed by Governor Odell as a trus tee of the New York Agricultural Ex periment Station, at Geneva, in th place of the late Edward A. Callahar of Albany.

The Tarrytown Horticultural Societ gave an exhibition of roses and straw berries in the Young Men's Lyceum, o Thursday, June 11, from 3 to 10 p.m. President J. H. Troy will leave fo Europe on June 27, for a pleasure tri extending over six or eight weeks.

A tar paper manufacturing plant, located close to the nursery grounds o Bobbink & Atkins, Rutherford, N. J is causing some uneasiness to the firr over the possible damage that may re sult to tender stock from the fume of the tar.

Mr. and Mrs. F. L. Atkins will sa on June 24 for an extended trip t Europe. Mr. Atkins will combine busi ness with pleasure, inspecting stock i the European nurseries, from whic Bobbink & Atkins draw their supplies

Alex. J. Guttman is renovating th rooms over his store on Twenty-nint street and expects to take up his resi dence there in two weeks.

P. R. Quinlan, Syracuse, N. Y., wa in town this week. Mr. Quinlan ha interests other than his extensive flor ist business in Syracuse, and last yea spent several months in South Americ looking after his asphalt affairs.

W. Kervan has taken the store at 4 West Twenty-ninth street, recently oc cupied by Hicks & Crawbuck, and i conducting a wholesale flower business

A quartette of New York's exper bowlers met at Thumm's alleys, o Tuesday evening, and began gettin into form for the coming bowling tour nament at Milwaukee during conven tion week.

John, son of David Shannon, ros grower, Madison, N. J., died suddenl on Tuesday evening. The young ma was about 28 years of age. The sympathy of the craft will go out to Mr Shannon in his sad bereavement. Th funeral was held on Thursday.

Alfred Dimmock sailed for Englan Thursday, June 11, on the s.s. Fuers Bismarck.

One of the wealthiest of the Greek fraternity, named I. Stjala, contemplates opening a store in the vicinity of Wall street.

John Gibson, of Gibson Bros., Newport, R. I., was a recent visitor.

W. Atlee Burpee was in town this week attending a meeting of the Wholesale Seedsmen's League.

A Correction.

Editor Florists' Exchange:

I wish to call your attention to an error in your issue of May 2. In it yo state that the firm of Mackay & Marr have leased some greenhouses in Winfield, L. I., where they expect to do a trade in pot plants for the New York market. There is no such firm here, nor has there been. The firm is simply James Marr. I do not intend raising pot plants, but cut flowers for the market. JAMES MARR.

News of the Week.

The Bellevue Improvement Civic League held its first annual flower show last Saturday afternoon and evening in Masonic Hall, Bellevue, a suburb of Allegheny. Similar associations of several boroughs adjoining lent their assistance, and large crowds attended the show to see the many flowers that were contributed by the residents and several florists. Fred Burki, the well-known grower, is an active member of the association. H. P. Joslin, secretary of the Florists' Club, is also a member of the association. Both contributed, as did E. C. Ludwig, the Allegheny Market florist. Beside these over a hundred of the residents of the borough helped with all kinds of blooms to make the show. One of the largest exhibits came from the private conservatories of H. C. Frick, in charge of his gardener, David Frazer, one of our best plantsmen. The Frick conservatories are noted for their gloxinias, and a splendid lot of fine plants were shown and very much admired.

The Civic League Association is officered by the best known people of Bellevue, and the work of the various organizations is being done through committees, such as tree planting, public floral exhibitions, front lawns and back yards, care of vacant lots, culture among school children, streets, public park and buildings, and flower shows.

J. F. Gibbs several months ago made a visit to Missouri and was so well pleased with the country that he is thinking seriously of locating there. He sold his florist business last year to his son Sydney, only retaining the flower stand in the Allegheny Market, which he will likely dispose of soon.

The outing committee has selected Thursday, July 16, for the florists' picnic to be held at Ross Grove, the same place where it has been held for the past few years.

M. Rice, of Philadelphia, spent several days in the city. E. C. R.

Cincinnati.

News Jottings.

The annual meeting of the Cincinnati Florists' Society will be held Saturday evening at the club rooms at the Jabez Elliott flower market. Five directors will be elected to pilot the society through the coming year.

Florists' Societies.

Florists' societies, taken as a whole, are about the toughest propositions we have to try and keep pulling along smoothly. They work very much like a yoke of oxen—pulling in opposite directions, consequently harmony is a very scarce article in many of them. And for this reason, if no other, I advocate the election of the younger element; for, as "Job" says, it is better adapted for the work, and will take more interest in oiling up the machinery. Take the S.A.F.O.H., for instance. There is nothing that will do this grand old society so much good as to entirely change its methods; put the younger timber in the harness, and let the older give advice, provided it be not too ancient. One of the best points made in President Burton's address at Asheville last August, and which was promptly voted down, was, the right of the directors of the society to name the places of meeting. This would give the society a chance to stand on its own bottom and be independent, instead of accepting the hospitality of some large city (for only a large city can now entertain the national society). And I want to tell you, that to raise the necessary funds for such an entertainment is a task that no one relishes. There are many small places where the national society could go, and do lots of good. Another very important thought. The members who attend the meetings in the smaller places would not be running around town; but when the bell tapped for the business meetings they would all be in their seats ready and willing to take part in the proceedings.

I see that St. Louis is bidding for the next meeting. Personally, I do not think the society should go there next year. Do the members go to attend the meeting? No. They go to see the World's Fair, and mighty little time they will spend attending the sessions of the S.A.F.O.H. Consequently, the annual meeting will amount to very little. On the other hand, if the directors had the appointing of the meeting place, they could select some point adjacent to St. Louis, where the convention could be held with some degree of satisfaction.

Frank Deller, nephew of R. Witterstætter, was married Wednesday evening, June 10. Frank, we all wish you many years of happiness.

C. P. Dietrich, of Marysville, Ky., was in the city, also Charles Weltz, of Wilmington, O. E. G. GILLETT.

San Francisco.

Flower Show.

For the benefit of Redwood City's free kindergarten the citizens of the town gave a very successful Flower Show last week under the auspices of resident ladies. The nurseries and private homes of Menlo Park and San Mateo joined with their neighbor, Redwood City, as competitors for prizes and honors.

News Notes.

A result of ex-Queen Liliuokalani's recent visit to San Francisco is a good supply order on the John H. Sievers Company for choice ferns and the new developments she saw in carnation and orchid lines, and that were very much to the Queen's taste. She wants to grow the plants in her famous Honolulu gardens.

Leopold & Ephraim are enlarging their downtown Post street store, the show-window space having been increased 50 per cent. Side wall mirrors are being set and the walls and ceiling covered with an olive green coating.

J. W. Bagge, gardener to the Crocker estate, has his mind on the coming dahlia show, to be held under the auspices of the Pacific Coast Horticultural Society, his determination being to enter some cactus varieties that will corral all first prizes.

E. P. Hosp, Riverside, is moving his headquarters to Oceanside. His hothouses in Riverside are also being transferred to Oceanside. ALVIN.

Manhattan, Kas.

Henry Moore was one of the unlucky florists who was first hit by hail and afterwards flooded by water. He was insured in the Florists' Hail Association.

Kansas City.

Disastrous Floods.

Not in many years has there occurred a disaster that has crept into the avenues of all lines of business as the present inundation is doing in this city. Although none but the manufacturing portions have been swept by water, nevertheless society in general has postponed its various functions and turned its attention to the great charitable work of caring for the hundreds who have lost everything. A fair estimate of the amount of money required alone will be $250,000. In addition to this liberal subscription many carloads of provisions and clothing are being daily disbursed.

It will be readily seen that the man who does not deal in the absolute necessaries of life is the first to feel the business depression, and the florists have been in the front row in this class. Supplies have been shut off from Chicago, and even small orders could not be filled. Several retailers doing business on the city market were requested to give their spaces to the vegetable merchants.

The growers dependent on city water experienced some annoyance, since the great main pipe was washed away, but fortunately this is a season when the houses are not heavily stocked.

At the Electric Park the landscape work is a total loss, having been under 5 feet of water for six days. The bottom lands in this locality are principally occupied by vegetable growers, and many thousands of feet of glass were wrecked in conjunction with crops.

The Blair & Kaufman nursery, near Argentine, has suffered heavily. The small stock was completely washed out of the soil and the larger stock flattened to the ground by the heavy rush of water and driftwood. At this point the Kaw River is two miles in width, which at its normal tide is but 150 feet.

Jottings.

Samuel Murray has returned from Excelsior Springs.

W. L. Rock was cut off from his home for three days. He spent the time at Excelsior.

James Payne has taken posession of the Ducret place recently purchased.

R. S. Brown & Co. report the heaviest Spring business in the record of their place. Decoration Day trade was light, owing to heavy rains.

ELLSWORTH.

Chicago.

News Items.

The cool weather of the past week has caused a shortage in some lines, and quite an improvement in the quality has been noticeable, especially in roses, which suffered considerably during the recent warm spell.

At present we are experiencing the dullest June the Chicago cut flower market has ever seen. The cause is attributed in a great measure to the unsatisfactory labor troubles the city is passing through; also the flooded conditions of some of the large southern cities, all good shipping points, which are hard to reach by express, unless by a roundabout route and a delay of several hours, or a day or more. Some of the express companies have refused to handle cut flowers destined for those points, consequently a considerable quantity has been thrown on the local market. Plant trade continues good; better than in former years.

Business among the retailers is as good as usual at this time of the year.

John Hoeft, formerly of Park Ridge, has opened a cut flower store in Elgin.

J. B. Deamud is receiving the cut of peonies of the Chicago Carnation Company, Joliet. Some very fine flowers are to be seen, and they are selling at a good price.

Vaughan's Greenhouses, at Western Springs, are sending some very fine peonies to the firm's stand in the Chicago Cut Flower Growers' Market.

F. Ben reports plant trade with him as a great deal better than in former years. His cut of carnations is extra heavy at this time.

A. Fuchs reports trade extra good. His place is in fine condition at present; he is devoting it chiefly to the growing of palms, ferns and rubbers.

At Lincoln Park everything has a Summer appearance. The bedding plants are all set out and are finer than ever before. In the center of the garden are two large mounds of subtropical plants, consisting of palms, rubbers, acalypha, caladiums, pandanus, alocasias, Schinus molle, abutilons and peperomias, which will in time, when their colors are brought out, make a beautiful sight. Pansies are in fine shape and were never better than they are this year. Head Gardener Stromback finds Sarah Bernhardt the best dark red geranium, with Harrison for light red. These two, with La Favorite, Mrs. Hill and La Constable, constitute the bedding geraniums he uses. Four canna beds are filled with Florence Vaughan, Egandale and Mme. Crozy. Fine beds of Smith's begonias are seen, also one of Stella Gurney ageratum. In the conservatories the chief attractions are fuchsias, pelargoniums, begonias and gloxinias, which are extra well grown. Bougainvillea Sanderiana was in bloom and presented a pretty sight.

The building inspectors have condemned the building in which Walter Kreitling's store is located, as a fire trap.

The Fleishman Floral Company is doing a good business at present, greatly in excess of last year. The firm has several large wedding orders booked for this month.

It is rumored that a movement is on foot among the wholesale commission houses to close on Sunday during July and August, the stores to be kept open on Saturdays until 7 o'clock p. m.

Poehlman Bros. are sending to their commission house the finest Bride and Bridesmaid received on the Chicago market.

W. J. Keimel and Richard Salm, for several years American Beauty growers with Poehlman Brothers Company, at Morton Grove, Ill., have taken an interest in the greenhouses of Brant & Noe, at Forest Glen, and will take full charge on the 15th. They will open a wholesale department in the Chicago Cut Flower Exchange, with Mr. Brant in charge. The firm will be known in future as The Brant & Noe Floral Co.

Visitors included H. A. Bunyard, representing Clucas & Boddington Co., New York; E. N. Zetlitz, Lima, Ohio; F. W. Ball, Cincinnati, Ohio.

R. JOHNSTONE.

Montclair, N. J.

This place is showing uncommon activity in planting. J. C. Williams, of the Chestnut Hill Nurseries, speaks of unprecedented business in this line. Fortunately, however, most of his sales have been among patrons with water at their command. Mr. Williams' crop of strawberries, of great early promise, has suffered.

A. S. Wallace is building a new greenhouse in upper Montclair to accommodate his trade in that section. The house is 18x75 feet and will be used for growing miscellaneous stock.

Robert McImes is back with Paul Wilcox on upper Mountain avenue.

Mr. Read has found employment at Turner's, just beyond. J. B. D.

Warren, Pa.

Jacob Onerle is engaged in tearing out his greenhouse which fronts Conewango avenue and the structure will be replaced this Summer by a three-story brick building. The first floor will be employed as a salesroom for the product of the greenhouses, and the second and third floors will be divided into four tenement apartments.

HORTICULTURIST (on his travels)—Are you having any trouble in this part of the country with the San Jose scale?

STAGE DRIVER—I can't say for certain, but I think I heerd some of the boys say the bosses had refused to sign it.—Chicago Tribune.

FOLEY
CAST IRON
GUTTER

This cut is not full size. We make two sizes: 2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

Mention the Florists' Exchange when writing.

"THRIPSCIDE"
(REGISTERED)
GREENHOUSE FUMIGATING POWDER

is the newest and best article on the market today for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:

1 lb. Tin Can ...	$0.25	25 lb. Sealed Box	$4.50
5 " " ...	1.00	100 " " "	16.50

Send for copy of testimonials. For reference we refer to Messrs. Bassett & Washburn, Hinsdale, Ill.

Henion & Hubbell, Western Agts., Chicago, Ill.

Mention the Florists' Exchange when writing.

Worcester, Mass.

Showers have come at last, too late perhaps to save an entire crop; but enough water has fallen to brighten up our disheartened farmers. Seeds have germinated so poorly that the seedsmen have been driven almost crazy by the abuse they have been forced to receive. The dry spell has increased the demand for millets for catch crops, with Hungarian and Japanese millet as the two leaders. Corn of every description is running close, and according to the Florists' Exchange of June 6, the prospects are not very bright for next season's stock.

The Worcester Conservatories is a new firm recently organized under the laws of the State of Illinois for the purpose of raising roses in this city. Fred G. Davis, of the firm, is personally superintending the erection of seven houses, each 300 feet by 30 feet, with a propagating house 150 feet by 15 feet. Walter Tappan, formerly with the Dale estate in Brampton, Ontario, has been secured as general superintendent. The rose houses are rapidly assuming shape. The first one will be ready in about two weeks and the others will follow in rapid succession. When completed Worcester will have added 100,000 feet of glass to its rapidly growing lot of greenhouses.

At the weekly exhibition of the Worcester County Horticultural Society, June 4, President O. B. Hadwen won two first prizes on rhododendrons and peonies. As usual, Fred A. Blake, of Rochdale, and Edward W. Breed, of Clinton, carried off many honors. There was a large attendance, owing principally to the display of wild flowers.

CAROLUS.

BANGOR, ME.—Carl Beers had the decorations of the County Court House on the occasion of its dedication on June 2. The floral work is highly spoken of by the local press.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

ROCKFORD, ILL.—The loss in the recent Globe building fire is estimated at $120,000. The Buckbee Seed Company used the building as a store house, and it is claimed lost $100,000 in seeds.

James B. Kidd, representing the Cox Seed Company, San Francisco, is registered at the Hotel Albert, University place and Eleventh street, New York.

Mme. Vilmorin, wife of M. Maurice de Vilmorin, died recently at the age of 43 years. She leaves five children. The flower arrangements of the deceased lady have on many occasions been greatly admired.

The Ventura (Cal.) Free Press announces that buyers are trying to bear the bean market in Ventura county, reporting among other things that the acreage this year will be 70,000. All of which the county paper named says is strenuously denied by the growers, who state the acreage last year was 30,000 and that it will be but very little more this season. ALVIN.

The firm of Churchill & Company was incorporated in New Jersey last week, with a capital stock of $10,000, to carry on a clover seed business in Toledo, Ohio. The other grain business of the Churchill interests and Paddock, Hodge & Co. was transferred to the new United Grain Company. The incorporators of the new company are Leroy S. Churchill, Arthur L. Mills and Fred L. Geddes.

R. W. Wright and wife, of the Lake Shore Seed Company, Dunkirk, N. Y., have returned after a six weeks' sojourn in California. During his stay in that State Mr. Wright visited the principal seed farms and, it being his first visit, was greatly impressed with the magnitude of the operations witnessed. He reports all crops promising, and while the acreage planted does not point to any great surplus, the present outlook does not indicate any shortage.

S. M. Isbell & Co., seed merchants, Jackson, Mich., by a recent fire in their elevator and warehouse, incurred a loss of $60,000, partly covered by insurance. The principal loss was of culinary beans, of which the firm are large handlers. Mr. Sheap, manager of the seed department of the firm, will be at the Seed Trade convention.

A circular has been distributed by the Treasury department, under date June 9, 1902, to the officers of the customs and others concerned, as follows:

"At the instance of the Secretary of Agriculture, it is hereby directed that, commencing July 1, 1903, and continuing for one year, two-ounce samples of all importations of 100 pounds or more of grass, clover, and forage plant seeds be prepared at the earliest practicable date after entry, and forwarded to the Seed Laboratory, Department of Agriculture, Washington, D. C., labeled with names and addresses of consignors and consignees, name of seed as given in the invoice and quantity of the consignment."

400,000 California Privet and more than 400 Varieties of HARDY ORNAMENTAL STOCK.

Wholesale Trade Catalogue on application.

American Seed Trade Association.

For the annual convention of the Association at Atlantic City, June 23-25, 1903, inclusive, a railroad rate of one fare and a third on the certificate plan for the return trip will be granted, provided 100 persons are in attendance who have paid a full first-class fare of not less than 75 cents through to place of meeting. The following subjects will be discussed: "Southern Forage Plants," by George B. McVay, Birmingham, Ala.; "The Importance of Accurate Descriptions of the Varieties of Garden Vegetables," by W. W. Tracy, Washington, D. C.; "Limiting Our List of Varieties," by Lester W. Morse, Santa Clara, Cal.; "Bulbs," by Henry F. Michell, Philadelphia; "Vine Seeds—Insect Pests and Remedies," by J. C. Robinson, Waterloo, Neb.; "Seed Advertising, Past and Present; Why it Does Not Pay Better, and Some Remedies," by Frank B. White, Chicago, Ill.; "Cabbages," by J. M. Lupton, Mattituck, N. Y.; "Trials of Peas for the Government," by C. N. Keeney, Le Roy, N. Y.; "Systems in Business," by C. E. Wilson, of the Shaw-Walker Co., Chicago; "The Application of Business Systems to the Seed Business," by H. A. McKee, of the Library Bureau, Chicago.

A neat program has been issued by Secretary Willard. The St. Charles Hotel will be the meeting place and headquarters.

The Wholesale Seedmen's League will hold its sessions on Friday, June 26.

The delegates to the American Seed Trade Association will journey to Fordhook Farm, on Saturday, June 27. Mr. Burpee is arranging to provide a special train for their comfort and accommodation.

Long Island Seed Crops.

Since our last report on the seed crop conditions on Long Island we have had all the rain we could wish, and there has been a marked improvement along all lines, the only drawback being the heavy wind that accompanied the rain, which laid low many pieces of cabbage. But the growers are doing their best to straighten things up, and if we have no more storms the injury from this source will be light. The greatest danger is from stem rot and maggot, which have ruined very many pieces.

The situation may now be summed up as follows: The general appearance is greatly improved, and the damage from storms and disease not sufficient to balance the gain, so that if there are no other disasters we may expect fully half a crop from the acreage put out in March, which was about two-thirds of the acreage contracted for last year. This, with the surplus held over, should be sufficient to fill the growers' orders, other than for some few varieties of which there is but little sale.

The outlook for kale has greatly improved, and with good weather for the next week more than an average crop will be secured; and it will require more to fill all contract orders.

Spinach has improved wonderfully. For a few days after our last report there was not a seed in sight, the plants all seemed dead or dying. But the rain and low temperature have worked wonders. There is now a fair promise of from half to two-thirds of an average crop. While there is but little grown in this country, that little seems indispensable to some of the most critical trade. Many growers, or truckers, refuse to plant unless they can get American-grown seed.

The ruta baga outlook is decidedly poor—never worse. But as American grown seed is, relatively, but little used, and the foreign crop is likely to be up to the average, there will be no shortage. The dealers who have built up a trade on the superior quality of home-grown seed may have considerable difficulty in procuring satisfactory stock.

The beans planted for seed purposes are doing much better than it was at one time seemingly possible. A good come-up and fairly good growth is the present outlook. It may have been better, if planting had been deferred until after the rains; but in that case germination would have been very poor, with the soil as cold and wet as at present. Therefore, those who planted early have been fortunate.

The drouth which had become so serious a problem for the Connecticut seedsmen has subsided and given place to a very cold, wet spell of weather for the past ten days, which has aided us materially in securing a good stand of sweet corn which, if the Fall is late, may yet, except in case of the very late varieties, make a crop of corn. It seems hardly possible that the season can be so favorable from this on as to make anything but a short crop of the late varieties of sweet corn.

Turnip seed has not improved with the rains, neither has kale to any great extent. These early maturing seeds were seriously affected by the dry weather, and have now another drawback in the way of weeds, which have come in since the rains, and which in a very few days will completely smother the dwarfed and stunted plants and render the situation still more trying.

Beet, onion and parsnip have recovered very largely, and are looking fairly well at present. The seed warehouses in this locality are empty; probably never in the history of the trade have the corners been so thoroughly cleaned out as they are at present.

The demand for sweet corn and for all varieties of field corn continues brisk up to this date, until everyone is almost or entirely sold out.

A large delegation leaves this section next Tuesday for the convention at Atlantic City. This delegation has been so enthusiastically invited that they could not refuse the invitation, and anticipate the time of their lives at Atlantic City and at Fordhook.

Numerous failures are reported in the stand for potatoes and onions from seed this Spring. The outlook for these crops through Connecticut is anything but bright, and seedsmen are having their troubles in complaints from customers because of the poor germination of the seed.

European Notes.

The hot wave which terminated on June 1 has been succeeded by bitterly cold northeast winds, with night frosts in some places, which have checked for the time the rapid and satisfactory progress which our plants were making.

Beet and carrot have suffered most, but as a bad attack of beetle always follows the "northeasters," rutabaga is certain to suffer where it is still in bloom.

The German growers of swedes and turnips have been very badly hit. Reports from France are almost as gloomy, especially as regards the extra early turnips.

In England the prospects are more cheering. Spinach has been badly injured in most countries and the setback will certainly delay the harvest.

Brassicas generally are picking up; it is a great pity the acreages are so very limited.

As regards flower seeds, asters are now nearly all planted, but sadly need some warm ground rains. Ten-week stocks are already showing flower buds. Pansies are very variable. On the high and light lands they have suffered severely and have had to be replaced with Spring sown plants, which are not so safe a crop as the Autumn. Polyanthus and bellis are doing badly, and as last year's stocks are quite exhausted, higher prices will rule. Myosotis, biennial stocks and wallflowers are very good.

In agricultural seeds, sugar beet and mangel-wurzel in Germany, have suffered very much; but replanting has been possible in many parts.

C. Loechner, of Suzuki & Iida, is in Europe looking up trade.

S. B. Dicks has returned from his African trip in greatly improved health.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President.
D. S. Lake, Shenandoah, Ia., Vice-President.
George C. Seager, Rochester, N. Y., Secretary.
C. L. Yates, Rochester, N. Y., Treasurer.

Silas Wilson, of Atlantic, Ia., has been appointed superintendent of horticulture for Iowa's world's fair commission.

The second annual convention of the National Nut Growers Association will assemble in New Orleans, La., Wednesday, October 28. The secretary and treasurer is J. F. Wilson, Poulan, Ga.

The eleventh census gives the number of nurseries in operation in 1900 as 4,510, comprising 172,806 acres, with a valuation of $41,978,835.80, and $52,000,000 capital invested. These nurseries employ 45,657 men, 2,279 women, and use 14,200 animals. At the time of the taking of the census, there were growing in these nurseries 3,386,858,778 plants and trees. Of these, 518,016,612 were fruit trees.

THE NEW ENGLAND ASSOCIATION OF PARK SUPERINTENDENTS.—This Association holds its annual meeting in Albany, N. Y., June 23, 24 and 25 next, the program being somewhat as follows:

Tuesday, June 23.—Business meeting in the rooms of the Albany Institute and Historical Art Society, at 6 p.m.; 8 p.m., banquet, Hotel Ten Eyck.

Wednesday, June 24.—10 a.m., carriage drive through the parks and boulevards, stopping at Lake House in Washington Park for lunch. 3 p.m., reception by Governor Odell, followed by an inspection of the Capitol.

Thursday, June 25.—Trip on Hudson to Newburg—to be arranged later.

JOHN W. DUNCAN,
Secretary.

Seasonable Suggestions.

Grafted catalpa, mulberry and other trees will usually push shoots vigorously from the stock, and before the graft grows much. It is well to let these shoots make a few leaves, as it helps the maintaining of the health of the whole; but keep them pinched back to a leaf or two each until the cions are growing strongly, then cut them quite away.

Young maple and other trees are apt to produce shoots below the desired height when first planted. Let them do this during the Summer. The more foliage, the more vigorous the trees become. Trim up to the proper height when Winter comes.

The Persian yellow rose is hard to increase in the way other roses are. Layering of it is slow propagation, but it gives some plants; and this is the season to do it.

Rains have been general in these parts during the past week, and both here and wherever seedlings are coming through the ground, if covered with forest leaves or other shading, it should be taken off gradually. The very dry weather of May dried out completely many seed beds.

Elæagnus longipes ripens its seed about now. Free them of pulp and place them in slightly damp soil, keeping them until Autumn, then sow them out doors.

By a little pinching in of growing shoots at this time, many a shrub can be made of salable appearance by Fall, which, otherwise, would not be. The operation will give several shoots for one.

Double Pink Deutzia.

Among some shrubs in flower from imported stock, we recently noticed a "Deutzia crenata rosea plena," which appears to be but our old friend Pride of Rochester. It is a good thing, anyway. The flowers are pink in the bud, being the outside of the petals. The inside of the flowers being white, there is a pretty combination of colors when the blooms expand. As this and kindred deutzias flower in June, when a large number of other shrubs are out of flower for the season, it is very much in demand for planting

Varieties of Azalea Mollis.

A month or so ago, when writing of the beauty of Azalea mollis, I spoke of the desirability of a larger assortment of Azalea mollis being offered by nurserymen than they do now. In connection with this, the following letter has been received from Koster & Co., Boskoop, Holland:

"We read in the Florists' Exchange of May 23: 'The time will come when the various shades of Azalea mollis will be kept distinct, as is now done with the Ghent azalea.' By same mail we send you a price list in which you find 22 distinct varieties of Azalea mollis, all grafted plants. It would not be difficult to give a list of more sorts. We draw your attention to our Azalea Frisia, Zeelandi and Tubantia, the best colored and finest Azalea mollis in cultivation. We have been grafting Azalea mollis for at least 25 years."

This is information we like to receive. These grafted, named plants should be obtainable at but little more than the cost of seedlings, and they are sure to be in demand. We would suggest to our friends, Koster & Co., and to others interested, that were the labels attached to azaleas to contain the colors instead of the names, or in addition to the names, the plants would be infinitely more salable. Hardly a soul here cares whether the name is Kaiser Wilhelm, Bismarck, Queen Victoria, or what, but they do want to know, and badly, too, what the colors are. The catalogue of the supplying firm may be in the office, but in the hurry of business the colors are wanted on the labels. The Ghent azaleas show that great pains have been taken to label each one, but, to repeat, hardly a person cares one cent for the name, the colors should go on—the color and the name both. I am led to make this suggestion because of the evident interest Koster & Company take in what appears in the Florists' Exchange.

Sowing Mulberry Seeds.

Nurserymen have experienced quite a call for mulberry seedlings the past season, chiefly owing to the demand caused by the revived attempt at silk culture. Every few years this enterprise has come up, since, perhaps, fifty years ago, and, so far without any permamency. In regard to obtaining mulberry leaves for the worms, there should be no trouble. Seedlings soon grow, and by setting out enough trees so that two groves could be formed, one to supply leaves every other year for the worms, no great damage would be done the trees by the taking of the leaves.

In the Middle States, mulberries are ripening now, and if the fruit is gathered, washed and seed sown at once, and afterwards it be seen to that they are kept moist, seedlings will soon appear, and will be six to twelve inches high by Fall.

Whether or not the demand for the plants will keep up is uncertain. As already stated, the fever to plant the trees has been recurrent many times. At any rate, seeds cost but little, and but a small space of ground is required for the seed sowing, so but little outlay is necessary. Should it be that seeds cannot conveniently be sown now, they keep in good condition very well if placed in a cool, dry place and are sown in early Spring.

Morus alba is preferred for the food of the worms, but any of its forms are as good, as, for instance, the Russian or even the Japanese.

Osage orange leaves have been used for the same purpose as the mulberry, but the quality of silk is said to be not as good when the former plant has been the food of the worms.

What is a Kindergarten?

By GEORGE HANSEN

The work deals with the word kindergarten in its literal rendering: "The Children's Garden," and the plea is made for the establishment of such an instructive and inviting spot around every home, and in every park. The author enumerates the list of subjects to be planted that will most interest the child, and in a very practical manner accompanied with various plans for lots of varying size, tells how these plants may be dispersed and treated to appear to best advantage 75 cents postpaid.

AMERICAN ASSOCIATION OF NURSERYMEN

REPORT OF PROCEEDINGS OF TWENTY-EIGHTH ANNUAL MEETING

At DETROIT, MICHIGAN, JUNE 10-12, 1903

The twenty-eighth annual meeting of the American Association of Nurserymen was held at Hotel Cadillac, Detroit, June 10 to 12. The Hon. William C. Maybury, mayor of Detroit, extended a cordial welcome to the convention, which was fittingly responded to by George A. Sweet, of Danville, N. Y

President Ilgenfritz, in his address, congratulated the members on the year of prosperity just passed, and at the same time warned against the danger of overproduction. He suggested that greater effort should be made to encourage exhibits at the annual meetings, and also urged the importance of organizing mutual companies for the purpose of insuring nurserymen against fire losses.

H. W. Collingwood, editor Rural New Yorker, read a paper entitled, "The Nurseryman as the Editor Sees Him," in which he deplored the selling of stock not true to name, carelessness in filling small orders, and misrepresentations of every kind.

Frank B. White, of Chicago, in a paper entitled "Publicity for Nurserymen," urged the importance of advertising, and gave some advice as to how it could be done most effectively. The subject was then discussed by three representatives of the agricultural and horticultural journals—Messrs. R. T. Olcott, National Nurseryman; J. M. Irvine, Western Fruit Grower, and Professor L. H. Bailey, Country Life in America—all of whom agreed in the main proposition that publicity is as necessary a factor in the success of a nurseryman as in that of any other business man. The various media for advertising were discussed, the most prominent among them being the horticultural press; also catalogues, which should be original and artistic. Newspaper advertisements and tree agents also came in for a share of attention, and one speaker advised nurserymen to abstain from advertising in journals of any kind that gave prominence to advertisements of liquors and patent medicines. Professor Bailey elicited applause with the statement: "The best kind of publicity is that which comes about from having first rate good stock, and getting the people in sympathy with you by letting them know just what this stock is by actual tests."

N. W. HALE

President-elect American Association of Nurserymen

The committee on legislation, in its annual report, gave a history of its efforts during the past Winter in attempting to get the federal bill regarding nursery stock through Congress, but could report nothing more than a favorable outlook for the future.

Professor L. H. Bailey read an essay on "The Whole Question of Varieties," which was listened to with great interest and provoked much discussion. Professor Bailey stated at the outset that he must not be expected to solve the whole question of varieties, but would only state some of the important and troublesome aspects of it. He said in part: "The variety-conception is really a late idea in the development of the human race. It is practically only within the past two centuries that cultivated varieties of plants have been recognized as being worthy of receiving designative names. This analysis has been growing more acute, specific, and concrete, with the passing of the years. We constantly define varieties on smaller and more definite points or 'characters.' Once it were enough that a rose were red; now that rose must be not only red, but must bloom at a certain season, produce a certain number of flowers, have certain definite shape and 'substance' of flower, and have twenty other points of merit. This raises the question, What is a variety? Clearly, it is only the ideal of one man, or one set of men. At best a variety is only an assemblage of forms that agree rather more than they differ; and any one of these forms may, with equal propriety, be called another variety. There are some things that every nurseryman can do with profit to hasten the time of more efficient varieties. The time has come when the nurseryman must cease to propagate only from stock merely because it belongs to a given variety. He should propagate only from stock, or trees, that he knows to have direct merit for efficiency. Greater attention must be given to individual merit in plants. Another way of increasing the efficiency of varieties is bv giving the variety the particular care that it needs."

"The Nurseryman's Work in Texas," was the subject of a brief paper by E. W. Kirkpatrick, in which he said that Texas was particularly adapted for horticultural work, owing to the fact that plants peculiar to both temperate and tropical zones can there be grown in close proximity, thus giving opportunity for crossing and hybridizing in constantly increasing forms and combinations.

J. H. Hale, of Connecticut, spoke on the subject, "The Relation Between the Nurseryman and His Customers," and was followed by Messrs. Collingwood and Irvine in a discussion of the same topic.

W. C. Barry, of Rochester, gave a talk on the "Importance of Ornamental Stock to the Nurseryman."

Professor John B. Smith, of the New Jersey State Experiment Station, spoke on "Spraying and Fumigation for Nurserymen Up-to-Date," giving advice as to best methods to be pursued under varying conditions.

George C. Perkins gave his views on "Insurance for Nurserymen." The subject was further discussed by Messrs. William Pitkin, of Rochester, and E. Albertson, of Indiana, both of whom favored the establishment of something along the line of a mutual insurance company. On motion of Mr. Albertson a committee of three, consisting of Messrs. Perkins, Pitkin, and Albertson, was appointed to investigate the matter and report at the next meeting.

The subject came up through the Question Box as to what nurserymen should do about the matter of West Virginia and Virginia licenses and laws which are considered very inimical to the nursery business, as well as unconstitutional. After a discussion, the subject was referred to the committee on legislation, with power to act, and expend money, if necessary, in combating these laws in the courts.

CHARLES WILLIS WARD

President-elect American Peony Society

George A. Sweet, of Danville, N. Y., spoke on "The Cost of a Tree." He said that there are so many elements of uncertainty in the production of trees that there is always a sort of lottery in the proposition. No two blocks of trees ever cost the same to produce, and never will. It is difficult to know where the cost price ends and the profit begins, but it is desirable that experiments should be carried on to determine this question as nearly as possible for each locality.

After a discussion, a motion was adopted that a committee be appointed to look into this question and to report at the next annual meeting.

A question in the Question Box, "Shall June Budded Peaches Be Measured from the Point Where the Bud is Inserted or Not?" was answered in the negative by several members, who stated that they should be measured from the ground.

Another question, "What is the Effect of Crown Gall in an Apple Orchard: How Can it be Prevented in Nurseries?" was answered by Professor Johnson, who advocated dipping the young trees in a two per cent. solution of formaline as a means of prevention.

Professor Stinson, of St. Louis, urged the nurserymen to avail themselves of the privileges afforded by the forty acres practically placed at the disposal of the Department of Horticulture at the Louisiana Purchase Exposition, and to help in making the exhibit in this particular line as creditable as possible.

The committee on exhibits reported a good display of fruit from Texas; also a peach planter exhibited by Mr. Romain, which was said by one of the members to do excellent service.

The following officers were elected for the ensuing year: President, N. W. Hale, Knoxville, Tenn.; vice-president, F. A. Weber, St. Louis, Mo.; secretary, C. A. Seager, treasurer, C. L. Yates, both of Rochester, N. Y., re-elected.

Executive committee, Peter Youngers, Nebraska; William Pitkin, New York, and John Kerr, Texas.

Atlanta, Ga., was chosen as the next place of meeting.

The social features of the convention were unusually pleasant and attractive, owing to the efforts of President Ilgenfritz and other local nurserymen. A trolley ride through the city, a boat ride to the beautiful Belle Isle Park, and visits to the various other parks of the city, proved enjoyable, as well as instructive, excursions to the members of the convention.

The American Peony Society.

The meeting of the American Peony Society, held at Detroit, on the evening of June 11, was a most satisfactory one, and developed much enthusiasm in the project. Several new names were added to the list of members and more were promised.

On reviewing the list of members it was estimated that fully 90 per cent. of the peony acreage of the country is already represented. This, taken in connection with the fact that the society starts off with a paid-up subscription list, is cause for much satisfaction, and augurs well for its future success and usefulness.

The meeting was called to permanently organize the Society, which, up to this time, has been working under a temporary organization. C. W. Ward presided, and A. H. Fewkes acted as secretary.

The question was raised, whether or not the Society should incorporate, and upon a vote being taken it was decided to do so. A charter will be taken out under the laws of the State of New York.

A draft of a constitution and bylaws was presented and carefully discussed. After several amendments had been made the constitution was adopted. The Society then elected officers for the ensuing year, which resulted in the choice of C. W. Ward, of Queens, N. Y., for president; Guy A. Bryant, Princeton, Ill., vice-president; A. H. Fewkes, Newton Highlands, Mass., secretary; J. H. Humphreys, Philadelphia, Pa., treasurer.

ARTHUR H. FEWKES

Secretary American Peony Society

Board of Directors: President, vice-president, secretary and treasurer, ex-officio; C. S. Harrison, York, Neb., for one year; E. A. Reeves, Cleveland, Ohio, for two years; William A. Peterson, Chicago, Ill., for three years.

For the carrying out of the various objects of the Society, the president appointed the following committees:

Nomenclature committee, five members: William A. Peterson, Chicago, Ill., chairman; C. J. Malloy, Rochester, N. Y.; John A. Charlton, Rochester, N. Y.; J. F. Rosenfield, West Point, Neb., and A. H. Fewkes, Newton Highlands, Mass.

JOHN SCOTT

KEAP STREET GREENHOUSES **Brooklyn, N. Y.**

Telephone 1207 Williamsburg

If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN,** although it has been cultivated many years, is still scarce. As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there will be no change in price this season.

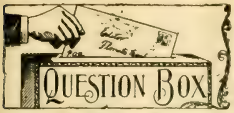
We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

Mention the Florists' Exchange when writing.



Chrysanthemums.

(127). I have chrysanthemums now in four inch pots. The plants have from two to five branches, about a foot high. What treatment must they receive to make good salable pot plants in 7-inch pots in the Fall? Shall I pinch them now to induce side shoots, or leave them alone? The varieties are Major Bonnaffon and Glory of the Pacific. A. H.

—If nice, healthy plants are wanted in preference to plants with one or two large flowers only, the chrysanthemums should be pinched back once more, and potted into larger pots as required until the flowering size is reached. Or, they may be potted at once into the 7-inch pots, if given the proper care in watering afterwards; that is, seeing that they never become over-watered and the soil made sour.

Asparagus Plumosus Nanus.

(128). I have two side benches planted with Asparagus plumosus nanus. I would like to know if I can run them over a second year for cut sprays. I have no room to put them in solid beds to grow strings. L. E.

—By giving the benches a liberal top dressing of soil and manure, the asparagus in the benches can be run a second year with perfect success.

Dahlias.

(129). We planted our dahlias about three weeks ago, and they are about a foot high, some of them showing bud. Would it be better to pinch off the buds or let them come? Did we plant too early? What is the best way to pack the blooms to ship about 100 miles? How long should the flowers stand in water before shipping? A. B. C.

—The dahlias were not planted too early; and it will be just as well to let the buds remain and develop. Cut the flowers in the early morning, place them in water, and pack and ship them at night, or early next morning. Pack in boxes deep enough to hold several layers of flowers; lay them close together so that they cannot move in transit.

Summer Treatment for Steam Boilers

Editor Florists' Exchange:

I would inform H. L. J. of the best method of treating steam boilers in Summer, which is as follows: When your season's firing is over and you want your boiler "laid to rest," get up about five pounds of steam, draw your fire and blow off your water. As soon as the boiler is empty and still hot, open up all valves and manhole and let the boiler dry out by its own heat, which will take only a very little while. Leave the boiler open like this until it is needed again in the Fall. I have found this to be the best method.

F. J. McS.

15,000 VINCA VAR. Good strong plants from cold frame 2 in., $1.25 per 100; $10.00 per 1000; 500 at 1000 rates. Cash with order.

AMBLER, PA.—R. C. Binder, Jr., has gone into the nursery business at his home on Tennis avenue, near Three Tuns, and will erect a greenhouse during the Summer. The property will be known as the Woodland Nurseries.

A Lawn Plant and Soil Binder for Arid Regions.

The great value of a plant which will form a satisfactory sward and prove a successful soil binder under the conditions of the arid region will be readily admitted. The observations and experiments of the Arizona Station, supplementing experience in Southern California, indicate that these requirements are met to a large extent by lippia, or fog-fruit (Lippia nodiflora), a plant belonging to the same family as the lantanas and verbenas. The plant is found in tropical and subtropical regions and occurs in this country in the South Atlantic and Gulf States and from Texas to California, principally along sandy shores and water courses. It "is a perennial, herbaceous, much-branched, creeping plant, the stems of which root extensively at the nodes. The thickened opposite leaves are one inch long or less, mostly blunt at the tips, and rather sharply saw-toothed above. The roots become greatly thickened below during the Autumn, and this reserve food supply undoubtedly enables the plant to begin growth in the Spring with little or no rain, and also to maintain itself during long adverse periods." It has practically no value as a forage plant because it develops a relatively limited vegetative growth, and animals dislike it, but the observations of the Arizona Station indicate that it can maintain a continuous layer of green with less water than any other desirable plant known to that region. During the Summer of 1902 it maintained itself for eight months on the mesa with less than two inches of rainfall. Not only is it a remarkable drouth register, but it can endure without injury extremes of temperature, varying from 10 degrees to 110 degrees F. It is, however, only slightly resistant to alkali, although it has been found to thrive in soils too alkaline for roses.

The plant possesses special advantages as a sand and soil binder. "When set two feet apart in favorable situations, it was observed that well-rooted plants of the fog-fruit covered the surface completely during one season's growth; and there is every reason to believe that it will do equally well in moist, sandy washes, since it favors such locations."

It will doubtless prove equally valuable for preventing washing of reservoir and stormwater embankments.

As a lawn grass for regions in which the usual lawn grass is grown with great difficulty, if at all, lippia seems to have peculiar advantages. It is easily grown and "forms a smooth carpet of green, interspersed with many small capitate flower clusters of rose-purple, varying to nearly white. In general, it gives all the effects of a white-clover lawn, though forming a more compact mass and not requiring the use of a lawn mower." It is not suited to densely shaded lawns and will not endure excessive tramplings.

The plant is propagated by cuttings The best time for planting is "during the Spring or Summer months, when, if well watered, it will be almost certain to secure a good start." The publication by the Arizona Station of information regarding this plant has aroused much local interest, resulting in a quite extensive distribution of plants by this station to persons wishing to try it.—Farmers' Bulletin, 169.

We have a fine lot in 2 1-4 inch pots, just ready for shifting or planting, which we offer at

$7.50 per 100; $60.00 per 1000.

From 3½ in. pots, $12.00 per 100; $100 per 1000.

These plants are grown from double-eyed cuttings made from select blooming wood, the same in all respects as we use ourselves. We grow nothing but American Beauty Roses, and both our plants and our blooms are recognized as having no superiors.

These Plants will be Carefully and Lightly Packed, and We Know will Give Satisfaction.

FLORISTS' PEONIES

1903 SEPTEMBER 1 TO 15 DELIVERY 1903

WE offer the following list of peonies which have been grown by us for several years for cut flower purposes. The stock has been carefully grown, bloomed the third year and rogued while in bloom. All are good bloomers and shippers and all varieties have been culled out and destroyed that do not flower freely. Prices include packing, and a discount of five per cent. will be given on all orders where cash is received with the order. The wet fall and spring have been very favorable for the growth of peony roots and our stock will be found in excellent condition.

OFFICINALIS SECTION

These are the earliest to bloom of all the peonies, and for this reason are very desirable, as they furnish cut flowers a week before the Chinensis section are in bloom.

No. 5. Officinalis Rosea Superba

Brilliant salmon pink, tinged rose; 5 to 6-inch bloom; a pure, clear, true shade of pink without any magenta; the most pleasing of the officinalis section; the first good early, clear pink peony. 300 plants, 3 to 5 eyes, at $25.00 per 100.

No. 208. Officinalis Rubra

The old-fashioned deep crimson peony of Colonial days. 1000 strong plants, 6 to 8 eyes, at $10.00 per 100.

No. 212. Officinalis Rosea

The old-fashioned deep pink variety of our grandmothers' gardens. 600 strong clumps, 6 to 8 eyes, at $10.00 per 100.

No. 198. Officinalis Mutabilis Alba

Opens rosy flesh, fading to blush white; very double 5-inch bloom; the earliest white peony. 500 good plants, 3 to 5 eyes, at $20.00 per 100.

CHINENSIS SECTION

This is the most useful of the different sections. The flowers are larger than the Officinalis, and are borne upon larger, stronger stems, and are richly fragrant, The blooms are especially valuable for cut flower purposes and are consumed in enormous quantities in the cut flower markets of Philadelphia, New York, Boston, Buffalo, Chicago and other large cities. The sorts we offer have been thoroughly tested for a number of years, and the blooms sold upon the New York, Philadelphia, Buffalo and other markets, where they are in steady demand.

EARLY WHITE VARIETIES

No. 4. Queen Victoria Guards light rose, center creamy white, with a few petals edged or tipped with light pink, flower finishing white; good grower; 24-inch stem; 5 to 5½-inch bloom; very free; fragrant; ships well and is a good keeper; a standard double white peony for all purposes. 500 strong plants, 4 to 5 eyes, at $25.00 per 100.

No. 200. Achillea Guards delicate rose, center delicate rosy flesh, fading to creamy white; vigorous; erect grower; strong stem, 30 to 36 inches long; bloom 6 inches in diameter; a chaste, beautiful variety; good keeper and shipper. 500 plants, 3 to 4 eyes, at $20.00 per 100.

No. 270. Marie Lemoine

(Early variety). Guards delicate rose with center of blush white, flower finishing a tender blush white; strong 30 to 34-inch stem; erect, vigorous habit; 5-inch bloom; delicate pleasing fragrance; good keeper; abundant bloomer. 300 fine roots, 3 to 5 eyes, $20.00 per 100.

EARLY PINK VARIETIES

No. 201. Grandiflorum Roseum

(Sometimes known as L L L Pink). Bright rose with silvery reflex, general effect clear, bright silvery rose; vigorous grower, 28-inch stem; 5-inch bloom; strong, rich fragrance; exceptionally free bloomer; good keeper and shipper. 600 strong plants, 6 to 8 eyes, at $20.00 per 100.

EARLY RED VARIETIES

No. 71. Rubra Triumphans

Entire bloom a most brilliant shade of crimson throughout; vigorous, erect grower; stem 30 to 36 inches long; bloom 5 to 6 inches in diameter; the very best early, dark red peony. 200 strong plants, 4 to 8 eyes, at $15.00 per 100.

No. 271. Rosea Grandiflora

Guards deep reddish rose, center light rose tipped with light pink; strong, erect grower; 30-inch stem; 6 to 7-inch bloom; delicate fragrance; extra free bloomer; a distinct, striking variety; ships and keeps well. 100 strong plants, 3 to 5 eyes, at $20.00 per 100.

Mid-Season White Varieties

No. 9. Pulcherima (Early mid-season). Guards white, veined rose pink, center very full, creamy white; strong, erect grower; 20 to 24-inch stem; 5 to 5½ inch bloom; very fragrant; free bloomer; ships and keeps well; a first-class white for all purposes. 500 plants, 4 to 8 eyes, at $20.00 per 100.

No. 203. (Sometimes sold as Humea Alba) (Early mid-season.) Guards delicate silvery pink, center creamy yellow, fading to ivory white; vigorous grower, 30 to 36-inch stem; 6 to 6½ inch bloom; rich, delicate fragrance; very free bloomer; ships and keeps well; one of the best of its class. 200 one-year plants, 3 to 5 eyes, at $30.00 per 100.

Mid-Season Pink Varieties

No. 1. Lohengrin Guards deep rose, center light rose with a few crimson tipped petals; vigorous grower; 18 to 24-inch stem; 5 to 6 inch bloom; delicate, rich fragrance; free bloomer; good keeper and shipper. 200 plants, 4 to 6 eyes, at $15.00 per 100.

No. 49. Rosea Elegans Guards light rosy pink, edged white, center bright rose, tipped white, surrounded with creamy white collar; strong, erect grower; 30 to 36-inch stiff stem, 5 to 6 inch high built bloom; free bloomer; delicate rose fragrance; good keeper and shipper. 50 plants, 4 to 6 eyes, at $25.00 per 100.

No. 206. Baron Rothschild

Guards deep rose with reddish tinge, center lighter rose shaded with rosy cream; vigorous grower; 26 to 30-inch stem; 5-inch bloom; exceptionally free bloomer. 500 very strong plants; 8 to 10 stalks, $6.00 per 100.

No. 2. Edulis Superba (Syn. Pink Beauty) Guards bright rose, center silvery rose; good grower; 20 to 24-inch stem; 5 to 6-inch bloom; free bloomer; delicate fragrance; good keeper and ships well. 500 plants 8 to 10 eyes, at $8.00 per 100.

No. 3. Queen Emma Guard petals light rose pink, center opens creamy white, fading to blush white, with a tuft of flesh pink petals in center; flower 5-inch in diameter; strong 24-inch stem; good grower; free bloomer; keeps and ships well. 300 strong plants, 3 to 5 eyes, $20.00 per 100.

LATE PINK VARIETY

No. 11. Humei (syns. Humei Rosea, Edulis and Thorbeckii) Entire bloom pure, bright, deep rose; very vigorous grower; 24 to 28-inch stem; 6 to 7-inch deep, full, heavy bloom; strong, rich cinnamon fragrance; one of the finest colors of the very late peonies. 1000 strong plants, 4 to 8 eyes, at $8.00 per 100.

LATE RED VARIETY

No. 259. Grandiflora Rubra

Entire flower deep blood red forming a huge globe 7 to 8 inches in diameter, strong, vigorous grower; stands handling; ships and keeps well; 30 to 34-inch stem; one of the latest as well as one of the largest. 200 strong roots, 4 to 5 eyes, at $20.00 per 100.

To get the best results Peonies should be planted as early in September as possible. ORDERS ACCEPTED STRICTLY IN ROTATION. Five per cent. discount for cash with order.

EXHIBITIONS.

CINCINNATI, O.—The schedule of premiums offered by the Fall Festival Association, September 10 and 17, has been issued. Prizes amounting to $1,000 will be awarded for displays of cut flowers, roses, carnations, gladiolus, lilies, asters, and dahlias, glad- exhibition is under the auspices of the Cincinnati Florists' Society. Competition is open to all. John A. Ringold, room [illegible], Perin Building, [illegible] chairman of the floral committee having the matter in charge.

"Greenhouse Men Indemnity Exchange."

A circular announcing the proposed formation of a "Greenhouse Men's Indemnity Exchange" is being distributed among the trade by Mr. Lawrence Woeber, of Wheeling, W Va. It is intended to be a mutual insurance, and the plan and methods are outlined in detail in the circular. The object is to insure against fire as well as "hail and tornado."

Insurance at the Exchange is "available only on high-class buildings or stocks belonging to greenhouse men whose prominence financially, and whose success in their business evidence them to be of a class exempt from the usual ratio of losses; all of which class of men are compelled by the methods of insurance companies to pay rates that are excessive in proportion to the drain upon the companies by careless and dishonest policyholders, and by unreasonable expenses as well.

"Subscribers only are insured. As a subscriber, one participates in the underwriting, having an interest in all transactions as if policies were issued by a corporation, and he a stockholder. The profits of participation are returned annually to the subscribers.

"To become a subscriber one executes a copy of the agreement under which the business is conducted, and deposits a sum called his subscription—from $20.00 to $200.00, as he may elect.

"Insurance on stocks in greenhouses will be written to cover two-thirds of their average value during the working season. Losses will be paid at 75 per cent. of the loss sustained up to the amount covered by the policy issued."

Regarding "hail and tornado" insurance, the circular states: "The plan of indemnity against loss sustained by hail and tornado is based on the same principles pertaining to fire insurance, with the exception of a difference in rates.

"Owing to lack of statistics bearing on the subject, we find it a difficult matter to determine just how much to charge for hail and tornado indemnity, but have finally decided to charge a premium of 3 per cent. on double thick glass, and 5 per cent. on single thick, to cover both hail and tornado. We believe that these premiums will be ample to cover all losses, and probably will justify a reduction of rates later. On the whole, however, since the subscribers participate in the surplus over losses, the initial charge is, in a sense, only perfunctory."

A 3 per cent. on double thick glass would be about 30 cents per hundred square feet. The Florists' Hail Association charges 6 cents.

John G. Esler, secretary of the Florists' Hail Association, to whom Mr Woeber's circular was submitted for an opinion, writes as follows:

"The plan of insurance outlined is a feasible method of insuring mutually, used by men in the same line of business. They are close corporations which do not concern the masses. The weak point of inter-insurance is, that it is largely based upon presupposed profits, a failure of which to mature would weaken the reserve, to say the least, if it did not enhance the cost of insurance. This, of course, would only happen in case of excessive loss. Again, any proposition that insures florists' stock against fire, or greenhouses against wind, can safely be placed in the extra hazardous class."

A Substitute for Glass.

The Flexible Glass Company, of Jackson, Mich., is offering to the trade a substitute for glass that is worthy the consideration of all greenhouse owners. The material appears to be unbreakable, colorless, and admits just as much light as does ordinary glass, and can be laid in continuous strips from ridge to eaves and bent to any curve without injury.

A clouded grade of the flexible glass is made for putting on palm or other houses that require shade. After seeing samples of the flexible glass, we are of the opinion that at last there appears to be a substitute for glass in the field that seems practical, though, of course, actual tests will have to decide the matter.

Peter Barr on American Horticulture

When the veteran English seedsman and daffodil grower, Peter Barr, V. M. H., of London, was in this country on his tour around the world, he made many friends among the trade, who, we have no doubt, will be glad to read the impressions Mr. Barr formed of American horticulture during his stay with us. The following is culled from the Journal of Horticulture, London:

Mr. Barr explained that he had been absent since April 5, 1898. Japan and South Africa were his two objective points, to study the features and floras of both countries. Mr. Barr has been a great traveler in his day, having four times visited parts of the least accessible regions of Spain, also France, Belgium, Holland, and Norway.

Starting in 1898 on his presently concluded world-tour, he made for Boston, and traversed the United States and a large part of Canada. From the Californian coast he proceeded to Japan, then to Shanghai and Hong Kong. Manila, in the Philippine Islands, was also visited while in this quarter, and he sailed southward to Port Darwin, in Queensland, and journeyed, with many halts and leisurely, right round to Perth in the West. New Zealand was included in this tour and Mr. Barr traveled from one end to the other, touching all except the King Country. The King Country is that portion of New Zealand which is reserved for the Maoris, and it is only now that Mr. Seddon, the Premier, has been successful in persuading the Maoris to allow roads to be made through this country. The Maoris are represented in Parliament by two or three of their own race

Visiting Tasmania, the veteran traveler included in his circuit the old convict establishment and fruit farms. He then made two voyages to the South Sea Islands, calling on the first occasion at Fiji, Samoa, and Tonga, and on the second at Lord Howe Island, New Caledonia, New Hebrides, and Banks' Islands.

Continuing his tour, Mr. Barr left Western Australia for the Cape, where he remained for fourteen months, "till the British bought peace, and martial-law lifted." His stay included an exploration of the north of Cape Colony, Natal, Transvaal, and Orangia (the new name for the Orange River Colony). Returning to Cape Colony at the end of six months he went up through Bechuanaland, to Lobasti, the starting point of the Chartered Company's territory.

The United States.

Boston was the first city in the United States to which our itinerant went, and Boston is the great teaching center of America. It is here that the world-renowned Harvard University is, and the first events that led to the War of Independence occurred, as every schoolboy has learned, in Boston Harbor. The city is horticulturally notable for its possession of a magnificent new horticultural hall and a unique library of gardening books. Its horticultural establishments, however, cannot be said to excel, most of the nurseries being but small places.

American gardening all through is commercial. The private gardens are made to pay, at least much of the produce in nearly all of them is sold. Our Yankee friends do not ask, How best can we enjoy our gardens? but, How can we make the garden pay? Therefore it cannot be expected that American gardens have the same interest and variety as English ones. Thirty years ago, Mr. Barr says, there was more private gardening in the States than there is to-day. No desire seems to exist "to found a family," and pass on an estate after the English fashion

Speaking of gardeners in the States, Mr. Barr declares that they are nearly all Scottish, English, Irish, or German. The law of contract between a master and an apprentice is not admissible in America, therefore the native-born lads do not complete their probationship even if they start Black labor is often employed for the heavier and rougher garden work.

But we were at Boston. The public park of this city is profusely planted, and bedding is practiced much on the same lines as in England The system of naturalizing bulbs in grass has not been attempted, though bulbs would succeed, and so far, our traveler found that only the common double daffodils meet with a demand. The planting season for trees and shrubs, he said, is confined to five or six weeks, succeeding the thaw in April, till the time when the sun is too powerful to allow of further planting with safety

Referring to the florists' stores of New York, Mr. Barr pointed out that the florists are simply distributing agents, and in many cases run great businesses as company concerns. Cut flowers are sent very great distances in America, as, for instance, from Toronto to Washington, or Toronto to Boston, a distance of nearly a thousand miles. Evidently the American railway companies furnish more suitable wagons for this class of freight than ours do at home But it must surely pay a grower to send stock even a thousand miles when we hear of a charge of three dollars per flower for American Beauty roses. These, however, must have stems of 5 feet in length, and it is said that to grow such roses at less than a dollar apiece means a loss. Long stemmed chrysanthemums are likewise all the vogue.

It is often and justly said that we in England know too little of America and the Americans. It is especially true, we venture to assert, in matters horticultural. And it is hoped, therefore, that the somewhat copious notes which we will give of Mr. Barr's tour, may be in the nature of an awakening to many, a refresher to others, and of some interest to every reader. We have stuck as much as possible to the aspect that pertains to our class literature, and the divergences therefrom may be condoned for various good reasons.

As Mr. Barr spent a whole year in the United States and Canada, and visited a large number of the leading cities, he was able to see and learn much of the nursery, park, and gardening systems. For convenience sake the towns and their features are arranged as nearly as possible in the order in which our traveler reached them.

As we have already stated, first he entered Boston, which has large pleasure parks, all of which are remarkable for shelters, well-built and well-arranged, where children may play out of the sun, or escape when the weather is wet. These parks are under the superintendence of J. A. Pettigrew, whose office and house are at Jamaica Plain, and who kindly drove our friend round his extensive control. At the time of Mr. Barr's visit they were reclaiming much land, and a great deal of planting was being done. The last letter Mr. Barr had from Mr. Pettigrew stated that the latter had been down to Virginia purchasing from Vanderbilt immense quantities of trees and shrubs. It is five years since the veteran traveler tarried in Boston, and he feels quite sure that the surroundings must have been considerably improved under the direction of Mr. Pettigrew, who appeared to have carte blanche. Boston Public Library (a magnificent building) is remarkable for its collection of books, and in the vestibule of this building Mr. Barr saw a map showing the London parks which had been supplied by the County Council at the special request of the city of Boston.

From Boston to New York is not a very far cry, and thither journeyed the Daffodil King, visiting here the Central Park, the most important of that city. It may be said to be in town, yet is bounded on one side by a natural forest, where the squirrels freely run. The park has a distinction for the largeness of its collection of bad statuary! The Zoological Garden is not of much consequence. The Park has abundance of seats and nice shade trees. The new New York Botanic Gardens will be a great feature in time to come. They are under the directorship of Dr. Britton, who is assisted by an old English gardener, Mr. Samuel Henshaw. There is a great deal of decoration of one kind and another around New York, and some very handsome residences.

Albany, the capital of New York State, was chiefly interesting to our narrator on account of the statue of Robert Burns in the park, the full story of which Mr. Barr is able to relate. It was erected by a Scottish lady, the daughter of an old Highland couple who landed in Albany in the early days of that city. The impression of the face is said to have been taken when Burns' body was exhumed long years after his death, and represents Burns as a powerful man, with strongly marked large face and head.

Rochester, in the same State of New York, is horticulturally and pomologically historical on account of its being the early home of fruit growing Here are the extensive nursuries of Messrs. Ellwanger & Barry, and the story of their development, as narrated by Mr. Barry, is that a young Irishman (a Catholic), and a young German (a Protestant), saw that there was a coming demand for fruit trees in the United States. These two men went up to Rochester, sending to Europe for trees. England could not supply many, but at last they found a French firm who annually shipped them large quantities; in fact, the Frenchmen found it answered their purpose to grow fruit trees specially for the American firm As time went on the two partners covered their ground with stock, their reward being the accumulation of large riches, and they presented a public park and handsome shelter to the town. Adjoining this is the Highland Park, used as a nursery for the public parks. This nursery is an interesting place, as the shrubs, flowers, and other subjects are arranged and cultivated together in their natural orders. It is under the practical management of John Dunbar, a Scotsman, who is assistant superintendent, and who obtained his American experience under your friend Mr. Falconer. Mr Barr was driven over the park system, which, on the whole, is a worthy institution for the comparatively small town of Rochester. On one side of the River Hudson is situated a large expanse of meadow, opposite it being a high and somewhat steep bank, which it was contemplated to plant with the native flora of the State.

Reverting to the Ellwanger & Barry nursery, it was here that our Victoria Medallist saw them lifting trees with the plough, which will give some idea of the great extent of their culture. The trees are thrown out on to their sides, and simply hauled out and packed off. Mr. Barr was informed that apple trees are never grown twice on the same land and on inquiring how they managed to get fresh land, the answer was that for miles around Rochester there was not a good bit of soil that had not been at one time or another planted with young apple trees.

Mr. Barry is the son of the original Barry, and is a man of about sixty years of age. Mr. Ellwanger, the original partner, is over ninety years of age, still hale and hearty, but feeble. His sons have a literary turn of mind, and have written several very interesting books on gardening topics.

Rochester leads on to Buffalo, N. Y., and is within hail of Niagara Falls. Buffalo is an old, and a very large city, well built, with fine streets, good parks, and well planned avenues. It is here that Mr. William Scott dwells, he, the most prolific writer in the American gardening press and a very notable personality. Making his acquaintance Mr. Barr got rid of some bottles of champagne (?) which friends at Sandusky, Ohio, had insisted on his taking. A health to ye, Mr. Scott.

Crossing the border to Canada, the renowned Canadian fall at Niagara was inspected, admired, and wondered at. Mr. Barr's cicerone, the Scotch gardener at the park here, was of opinion that the Niagara Falls are shrinking, but on this point there is considerable difference of opinion. At Niagara there are two societies, one on the Canadian side, the other on the American, each devoted to historical research and the literature touching the period when the contention between the U. S. and Great Britain for that portion of Canada was rife. Through the kindness of the superintendent of the Queen Victoria Park, Mr. Barr was presented with a volume from the Canadian point of view; but he was not so fortunate with reference to the American.

(To be Continued.)

Obituary

J. T. Anthony.

J. T. Anthony, a well-known Western florist, died at his home in Geneva, Ill., on Thursday, June 11. Mr. Anthony was born at Foster, R. I., in 1842, and went to Chicago many years ago, there entering the employ of a Mr. Page. Later he bought the establishment of Samuel Muir, Michigan avenue, remaining there for eleven years. Subsequently he built greenhouses at Prairie avenue and Thirty-fourth street, Chicago, which he operated in connection with his florist's store in Michigan avenue. In 1893 he bought the Jackson greenhouses, which he conducted for over a year. His latest venture was at Geneva, Ill., where he had been growing stock for the Chicago market.

The deceased took great interest in all horticultural matters around Chicago. He was identified with the Chicago Florists' Club, and with the Horticultural Society of Chicago. In 1893 he was chosen president of the Society of American Florists at St. Louis.

THE LATE J. T. ANTHONY.

Mr. Anthony served in the Civil War, having been a commissioned officer in the quartermaster's department, and was well known in G. A. R. circles. He was also prominent as a Mason.

The remains were interred in Oakwoods Cemetery on Saturday, June 13.

THE LATE JAS. W. McGARRETT.

Jas. W. McGarrett

James W. McGarrett died at his home in New York City of a complication of diseases, after a lingering illness of over a year's duration. Mr. McGarrett was one of the oldest representatives of the florist profession in New York City; his first employment commencing with Messrs. Bridgeman & Co. In the early sixties he was a member of the National Guard, and during the Civil War patriotically responded to the government's call for volunteers, going to the front with his regiment and participating in the battle of Gettysburg and in other active service, both with the Twelfth and Eighty-fourth regiments, S. N. G. of N. Y.

THE LATE GEORGE HANCOCK.

(See Obituary in last week's issue.)

After his return home Mr. McGarrett again sought employment in his profession and served many years among the trade in New York, having been in the employ of the elder Walter Reid for eighteen years, and with Rickards & Co. for many years, his last employment being with J. W. Hauser, of Madison avenue, where he remained for ten years, until the time of his fatal illness. He had also been a respected employee of Charles Thorley, of Broadway, and of Alex. McConnell, of Fifth avenue.

Mr. McGarrett was held in high esteem by all, especially in the trade where he was well known. He was of strong character, conscientious in the discharge of his duties, faithful to all trusts, never swerving from what he considered just and right.

He leaves a widow, four sons, and four daughters. William, a printer, George, with A. McConnell, and Frank, an architect. His eldest daughter, Mabel, is a teacher in one of the New York public schools.

Funeral services were held at his late residence, [illegible] East Fifty-[illegible] street, on Sunday, June 14. The

ALEXANDER McCONNELL.

Photographs

The Florists' Exchange will pay $1, either in cash, a year's subscription in advance for our paper, or a credit for $1 worth of books, to be selected from our Book List, for each and every accepted photograph of any specimen plant, shrub or tree, foliage or flowering. Photographs can range from representations of the most ordinary bedding varieties up to the most stately palm, stove plant, shrub or tree, the desire of the publishers being to obtain as nearly a complete collection as can be secured. By "specimen" we mean one plant standing alone, all background to be screened off; to obtain this effect some cloth of neutral tint, as a gray for instance, should be used. Also, we will pay as above for distinctive lawn views, hedges of privet, boxwood, etc., for single specimen blooms, or artistic arrangements of cut blooms from flowers or flowering shrubs and trees.

Please note this is no competition, the only condition for acceptance being that photographs must be clear in detail, and each picture forwarded be accompanied with a proper description.

Size of photographs must not be less than 4 x 5 inches, although $6\frac{1}{2}$ x $8\frac{1}{2}$ inches would be preferred.

Address correspondence to Photograph Department.

FORT COLLINS, COL.—Mr. Clippings, who recently started the Pansy Greenhouse establishment here, is doing a very satisfactory business.

ROSES

Cultivation of Outdoor Roses.

(Concluded from page 679.)

Hybrid tea roses are increasing in popularity year by year, and they have become among the most useful roses that we have. They are hardier than the teas, with increased size of bloom; and we have now almost every color in this class. This is a good type of rose to grow for cut blooms. The stems of most of the varieties are longer than those of the teas and not as heavy as those of the hybrid perpetuals.

The best varieties of hybrid teas include: Antoine Rivoire, rosy flesh; Aurora, salmon pink; Augustine Ginnoisseau, rosy white (fine); Belle Siebrecht, bright rosy pink; Bessie Brown, creamy white; Cameon's Glory, rose; Captain Christy, blush; Mme. Caroline Testout, the best pink, fine for massing and cut flowers; Charlotte Guillemot, ivory white; Countess of Caledon, pale rose, extra large; Denmark, like La France, deeper in color; Duchess of Albany, deeper pink than La France; Duchess of Edinburgh, rosy crimson; Ferdinand Batel, rosy flesh on yellow ground; Grace Darling, creamy white, edged with peach; Grand Duc Adolphe de Luxemborg, rosy red, reverse petals, brilliant lake, one of the best, handsome and distinct; Gruss an Teplitz, fiery red, good bedder; Helene Cambier, salmon rose to copper rose; Kaiserin Augusta Victoria, the best white and one of the very best roses in cultivation; La France, still one of the best; Lady Battersea, rosy crimson, shaded with orange; Liberty, bright red; Mme. Cadeau Ramey, rosy flesh; Mme. Jules Grolez, fine rose; Mme. Pernet Ducher, canary yellow, nice buds; Marquis de Salisbury, brilliant velvety red; Marquisse Litta, carmine rose; Mildred Grant, blush, white tinted pink (extra); Robert Scott, rosy pink; Souvenir du President Carnot, flesh, one of the best; Viscountess Folkstone, creamy pink, extra large flowers, a first-rate garden rose.

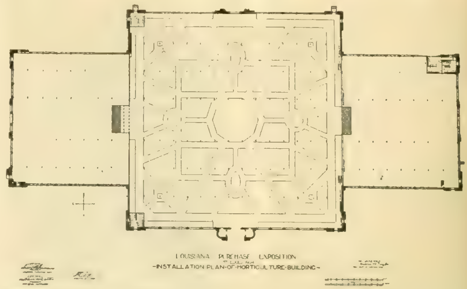
One of the most useful, and one of the most decorative roses that I know is Rosa rugosa. Anywhere it is in place, be it in the garden proper or in groups upon the lawn, or in the wild garden. It also makes one of the best hedges. It needs no pruning every year, as does privet, spruce, etc., and no staking or wiring like the climbing roses. It is one of the first to bloom in May and keeps on flowering through the season. The buds are very handsome, especially those of the white variety. One of its best points is its handsome foliage, which holds its color until frost. I have never seen rust upon it yet, and insects do not trouble it, with the exception of the June bug, which sometimes feeds upon it. But the foliage is so plentiful that you cannot see where the insects have been. Another thing recommending this rose is the fruit which shows up as we approach the Fall, and is produced in abundance, lasting long into the Winter.

This rose opens up a great field for the hybridizer. Some good things have already been obtained from it, one of the first being Mme. Georges Bruant, with clear white buds, something like those of Niphetos; Blanc double de Coubert, Conrad F. Meyer, silvery rose, very sweet; Mercedes, soft rosy pink, outer petals white, a new color in this class, and also very sweet.

For cultivation, plant in very rich ground and let the roses grow free from all pruning. Should they get too large, or bare at the bottom, cut to the ground, and they will come again as strong as ever. Next to R. rugosa, I would place the hybrid sweet briars. They are almost as useful as R. rugosa, with their lovely single and semi-double flowers and sweet-scented foliage, especially after rain or when the dew is on the leaves. They make a fine hedge, but need a little tying in of the long shoots the first year or two. They are also good for grouping, and if one has a rough corner, they are the thing to cover it up. Plant in good soil, and then keep the pruning shears from them and they will soon take care of themselves. They can be used to advantage in shrubberies, on the edges of woods and by woodland walks, where the shade is not too dense.

Rosa Wichuraiana is another rose that has become of great value in our gardens, especially the hybrids which have been raised from it. There is no rose better adapted for covering dry embankments where grass will not grow. The plants will flourish covering rock or rough places, stone walls and such like, and if planted so as to get into some trees, will make good climbers. The foliage of most of the varieties is very attractive, and the newer sorts have very handsome buds. Among the best are Evergreen Gem, Gardenia, Jersey Beauty, Manda's Triumph, Pink Roamer, Ruby Queen, Alberic Barbier, Rene Anare. The last three are new varieties.

We will now take the multiflora rose, especially the climbing varieties. They are all strong growers, and are first-rate pillar roses. For hedges they are also very useful, or as single specimens. First comes the Crimson Rambler, which drew attention to this class of rose. It is one of the most popular ever sent out, and to-day you see it everywhere. It flowers at a time when other roses are getting pretty well past. For single specimens, or in groups, it is equally good; and it makes a grand hedge. Aglaia is in the same class, and is also very good, being very sweet-scented. Electra, double yellow (new); Leuchentstern, single bright rose, white eye; Queen Alexandra in the style of Crimson Rambler, but the flowers are lighter in color; Royal Cluster, white and blush, fragrant, the Dawson pale rose, I think, is the best of its class; it is a good grower, the color of the blooms is good and clear and they are very sweet-scented. A fine rose for pillars.



LOUSIANA PURCHASE EXPOSITION
-INSTALLATION PLAN-OF-HORTICULTURE-BUILDING-

The dwarf polyanthas are useful for massing, or for edging other beds. They are free bloomers. Anna Marie de Montravel, white, free; Blanche Rebatel, purplish crimson; Cecil Brunner, rose, yellowish center; Gloire des Polyantha, rose, free; Mme. E. A. Nolte, yellow; Magdelene de Chatelier, pale yellow and copper; Mignonette, soft rose, one of the best; Parquerette, white; Perle d'Or, nankeen yellow, one of the best; Perle des Rouges, velvety crimson, always in flower; Clothilde Soupert, still good.

This is a class that demands more attention than it is receiving; that is, the species and their varieties. There are some very handsome plants in this class, useful either as climbers or bushes. Some are best when left to grow wild. Among the best are: Bardou Job, a garden variety, will grow six or seven feet high. It is one of the richest colored roses there is. Carmine Pillar, another garden variety, rosy carmine with white eye; one of the best pillar roses extant. Gloire des Rosomanes, crimson, semi-double; Hespida, pale yellow, single; Macrantha, large white blooms, with yellow stamens, makes a very handsome bush; Paul's, single white, good; Pissardii, white and lilac in fall; Pomifere, blush, followed by deep red fruit, a strong growing bush; Prairie rose, flowers in July after it can get a hold of a tree to climb on. This latter is our best native rose, and Spinosissima.

Scotch roses, single flowers of various colors, dwarf bushes. The Ayrshire rose and its hybrids should be put where they can get a chance to climb on tree stumps, rocks, or anything in that line. The best are: Bennett's seedling, white, double; Dundee Rambler, white, semi-double; Mme. Viviand-Morel, carmine rose; Queen of the Belgians, creamy white, double, splendid flesh color.

The moss rose has always been a favorite of our gardens. To get the most out of the plants they should be set in very rich ground. There are numerous varieties in this class, but not many of them are worth growing. The common moss is one of the best yet, Crested comes next to it, Crimson Globe (new); Gloire des Mousseuses, blush (good); Gracilis, heavily mossed (fine); White Bath; Blanche Moreau; Perpetual, white moss.

There are a few other roses that should have a place in the garden, such as the old cabbage, red damask, or Mme. Hardy. All Austrian roses are worth growing; in fact, our finest yellow roses belong here. The Persian Yellow is the finest of yellow roses and should be in every garden. Harison is a little lighter in color, but a rather stronger grower. Austrian Yellow is a single, but is the purest yellow of all and requires good growing to get it up to the mark. Austrian Copper should be grown by everyone; it has a most lovely color—orange red.

And we must not forget a few of the old-time pillar roses, such as Blairii No. 2, blush pink; Chénédolé, vivid crimson; Coupe de Hebe, deep pink, and Fulgens, deep crimson. Mme. Plantier is good as a bush hedge, or it will do as a pillar rose also; Paul Ricault, rosy crimson; Purity, white, blush center.

The rose is like everything else that grows—it needs lots of care and watching to bring it to perfection. We must make the conditions for the plants as suitable as we can, keeping the ground free from weeds, and suckers from the bushes. Keep the soil as firm as possible, placing only a dust mulch on the surface. Some people like to have the digging fork among the plants all the time; but this is a great mistake, as the rose likes to fight its way through firm soil.

Rose beds, after the Spring pruning, should be forked over and some manure and bone worked in. Bone, provided it is pure and free from acids, is one of the best of foods for roses.

After the plants have started well, you will have to keep a sharp lookout for insects, especially the rose slug and caterpillar. As soon as you see signs of these give the plants a dusting of hellebore with a powder gun. The time to do this is in the morning, when the dew is on the leaves, but once will not suffice; you will have to keep it up for some time—about once a week. You will gain by doing so, because you will have healthy foliage and handsome flowers. By using hellebore you will not be troubled with green fly. Of course, pillar roses that are planted around the house will get affected with fly sometimes; also with the white thrips. Tobacco water is the best cure in that case.

Some seasons we have been greatly troubled with the June bug eating the foliage and young shoots. There is no remedy for this pest except to hunt the bugs with a light at dark. Use a lantern and small can with water and kerosene oil, and go among the bushes and pick off the insects, dropping them into the can. In this way I have caught

PALACE OF HORTICULTURE, WORLD'S FAIR, ST. LOUIS.

(See page 675, issue of June 13, for description.)

as many as eight to ten quarts of bugs in a night. For mildew, use sulphur. I think it is one of the best remedies yet. Some seasons certain varieties will get a reddish rust on the back of the leaves, which spreads very fast. Bordeaux mixture is good for it, but disfigures the plants, so I would recommend copperdine, used in paste form; one pound will make fifteen gallons of solution.

In conclusion, if you want to have roses, start in the right way, with the best varieties. Plant your roses where they will not be disturbed for a good many years, and you will be well repaid in increasing bloom for any extra trouble you may have had in the planting of them.

In the discussion following the reading of the paper, Peter Duff coincided with the speaker, particularly upon the point of grafted stock. J. C. Williams preferred plants on their own roots. The speaker contended that, with the exception of climbers, grafted stock did "twice as well." J. B. D.

Cultural Notes.

There is really no set time when roses should be planted, as the work depends entirely on the condition the young stock is in, though most of the roses are benched in June out of 3½ or 4-inch pots. If, however, the benches are still occupied with paying stock the rose plants, if pot-bound, can be shifted into 5-inch pots; or break off about one-third of the ball and repot in the same pot, using fairly rich soil. If this be done, the plants should be cut back a little, and after the first watering be kept a little dry, till the roots start. Syringing should be done as often as possible. By this means the planting can be put off for some time, and the plants kept from becoming hard and checked.

When the old soil is removed from the benches these should be washed out thoroughly, and, when nearly dry, receive a coating of lime or cement wash. The latter is preferable, though a little more expensive. When dry, spread over the cracks some hay, straw, or cover with pieces of sod.

Before the soil is brought in, it should be turned at least twice, breaking up all the large lumps. It is better not to get the soil too fine. At the last handling it should receive some bone meal, at the rate of 75 to 100 pounds to a 100-foot house.

Just before setting out, the plants should receive a good soaking. This is a very important detail, for if not planted in this condition it will take them very much longer to start, and they are very apt to become weak. After planting, the whole bench should receive an even watering to settle the soil. After this but very little water is required. The grower must now use a great deal of judgment, especially in cold, cloudy weather, as if overwatered the plants soon become weak and spindly; and if allowed to get too dry they become hard and are apt to drop their leaves.

For the first few weeks water only the ball of the plant. Some of our leading growers make a little bowl or hollow around each plant, in which to pour the water, but with little care this is unnecessary.

It should be borne in mind, however, that it does not pay to plant any inferior stock; each plant should be made to produce good flowers, and this is impossible with poor, weak plants. Good stock can be obtained at a very small outlay, and it will be found a good investment. PENN.

Agaves at Botanic Garden, Washington.

The bed of agaves shown in the accompanying illustration is on the west side of the walk approaching the main conservatory from the south of the Botanic Garden, Washington, D. C. Another bed of a similar character is on the east side of the walk. The bed contains about fifty varieties, arranged according to their height, the taller ones being in the center, grading to the lower edge, which is an eight-inch border of portulaca. The bed has a rockery for a background, planted with herbaceous plants. At the north end of the agaves is a round bed elevated by a wall made of coral-rocks and planted with a variety of echeverias and other ornamental succulent plants.

Rose Establishment at Hamburg, N.Y.

For some unsolved reasons, attempts of but indifferent character have been engaged in to grow roses locally for the Buffalo market, that is, for the trade. Though a certain reliable demand of no mean proportions exists, the town is distinctively known as receiving its general supply from over-night distances.

Five years ago, Charles T. Guenther, a comparatively young man, possessed of a practical working knowledge of rose growing gained by experience in metropolitan districts, broke ground for such an establishment at Hamburg, N. Y.

A first visit to the place last week at once betrayed an air of prosperity in all parts of it, and told of a successful result. This, in spite of the fact, which Mr. Guenther admittedly states, that through comparative lack of sunshine here, and fuel conditions not so favoring, roses cannot be produced to the same cost advantages, as in the East.

In locating the plant, for better or desired isolation from the public and to obtain a better water supply, the structures were placed well back from the street and close to a creek that borders the five-acre lot on the rear, and with the ground favorably sloping towards it, to the south. This stream furnishes a continuous water supply of an adapting soft quality. It is pumped into a tank by steam power in the Winter season, in Summer by windmill power.

The rectangular-shaped lot being narrow, in approaching from the north, a well appointed shed is first entered, and reaching nearly across the lot. From this, at right angles, a 10-foot wide house leads off, serving, practically, shed purposes to the other east and west houses. To the east six houses extend 50 feet in length, to the west the same number are 100 feet in length; in width they range variously from 10 to 26 feet.

The personal application that is so necessary to produce good flowers, combined with intelligent knowledge, is earnestly practiced here. The varieties grown are closely limited to Bridesmaid, Bride, and some American Beauty for Winter, with Kaiserin Augusta Victoria and Souvenir du President Carnot added features for the Summer demands. Solid beds are the rule. A house of Kaiserin, now in full crop of perfect blooms, is in its fifth year. Another of younger stock, just starting for this season's cropping, seemed absolutely perfect in plant growth and vigor.

A new house now building 16 by 100 feet, is being fitted with cement sides for the ground beds.

Two houses are devoted to carnations, and a successful quality of blooms is produced. The varieties favored here are: For pink, Mrs. Frances Joost, The Marquis and Mrs. Lawson; White Cloud for white; in fancies, Prosperity and Mrs. Bradt; light pink, Morning Glory. Local conditions of soil and treatment are not so favorable to the Marquis, but the others bid fair to be relied on as staples for next season.

The heating facilities located in a detached walled basement, include two steam heaters, of capacity respectively of 35 and 45 h. p., with one of 22 h. p. for emergency. Butted glass of large size only is employed in all the houses. Without going into details of why and wherefore, Mr. Guenther stated decidedly that the advantages of the system overweigh its few deficiencies as he sees them. VIDI.

Some Neglected Evergreens.

Editor Florists' Exchange:

An examination of the catalogues of most of the leading nursery firms in this country would lead one to believe that some of the finest varieties of coniferous evergreens are not in great demand here, or else that the nurserymen are neglecting their opportunities by not offering them. With your permission, and in the hope of inducing others to try them, I will mention a few sorts which seem to me worthy of a place in every collection and which are seldom brought to the attention of the ordinary buyer.

Tsuga canadensis var. microphylla is a dwarf variety of the common hemlock, all of whose parts are a miniature copy of the type. The leaves are from one-fourth to five sixteenths of an inch in length and the annual growth amounts to but little more than one inch. So very slow is the growth that my specimen, which is nearly as old as I am (and I, like it, have been out of the nursery for some time) has only attained a height of 13 inches and a spread of 34.

It is perfectly hardy; the only care necessary is to see that it does not get broken by the weight of the Winter snows.

Tsuga canadensis var. aurea is spoken of in "Veitch's Manual of Coniferæ" as being inconstant in its color, but my own tree has retained its golden hue to some extent throughout the season. Like most varieties of evergreens departing from the normal green, it is brighter when making a new growth, but it is at all times sufficiently golden to stand out well in a group of green.

Neither the bright sun nor the cold winds of our Winters seem to affect its foliage.

The dwarf form of our common red cedar, Juniperus virginiana var. globosa, is of globular growth and is very neat, perfectly hardy, economical of space and distinct in foliage and form.

Among the retinosporas there are several rare kinds which should be better known.

Retinospora obtusa var. filicoides is one of the most beautiful little plants known to me, its sprays of foliage having all the grace and delicacy of fern fronds.

R. obtusa var. filicoides aurea (sometimes known as R. tetragona) is like the last named, except that its foliage is a rich yellow and it is of slower and more compact growth. Both are hardy in well drained soil, but should be protected from the weight of the snow, as they are not of very strong growth.

The dwarf form of R. squarrosa, known as var. nana, is a little gem and very rare. It has the soft silvery foliage of the parent form, but of diminutive size, and it grows so slowly as to seem scarcely to gain at all from year to year. If this excellent little plant were procurable in quantity it might be effectively used for bordering walks or formal flower beds, as the box was used in old gardens.

R. pisifera var. nana argentea variegata, another exquisite miniature form, has the pisifera foliage in reduced size, specked with white and of dense growth.

There is also an uncommon variety, of R. filifera known as filifera aurea variegata. Retinospora filifera, or the thread-branched retinospora, is a well-known tree of moderately strong growth. Its golden variety (R. filifera aurea) is also frequently planted and forms a small drooping shrub of much beauty, and the first mentioned variety (R. filifera aurea variegata) is also shrub-like and beautiful, the color appearing in "splotches and splashes," instead of being evenly spread on the foliage.

Among the yews, probably the best for our climate are Taxus baccata var. adpressa, T. b. var. repandens, T. cuspidata, and T. canadensis, for they do not require protection. All of these yews, however, are to be found in well-furnished commercial establishments.

The above-named sorts, with the possible exception of the golden hemlock, are suitable for small lawns, as they do not attain any great size and are therefore desirable plants for many whose limited space forbids and should prevent the planting of large growing trees. GEO. H. BUDKE.

Insurance for Nurserymen.

Read by George C. Perkins before the American Association of Nurserymen, at Detroit, Mich.

I don't know just how I came to get into this mess. I am usually retiring and unobtrusive enough to avoid all such opportunities of displaying my ignorance. I think it came about in much the same way that I am told people sometimes get into a state of intoxication; that is, I was in it before I knew it.

I feel entirely out of my class, too, in being slated to talk on the same subject with such people as Mr. Pitkin and Mr. Albertson. I never was much of a talker, and those of you who have done business with the other gentlemen know what they are, especially when it comes to getting the best end of a bargain.

I don't know much of anything about fire insurance, either, though I am a firm believer in it. A friend of mine at home is the treasurer of the church at which I am a regular attendant, at least by proxy, for my wife goes every Sunday. My friend, the treasurer, is what Bill Nye calls an "irreverent cuss." He sent me a postal card a while ago on which was written "Your fire insurance has run out." As he wasn't in the insurance business I couldn't make out what he was driving at until it had occurred to me that I had neglected to pay my pew rental for the last quarter, and this was his delicate way of reminding me of it. I suppose it is fire insurance for this world rather than the next, that we are to discuss to-day, however.

When this insurance question came up, it was suggested to me that if reliable data could be obtained regarding the average percentage of losses sustained in the past upon nursery cellars, we might go before the national board of underwriters and make a showing that would enable us to secure lower rates from the old line companies. It occurred to me, also, that if unsuccessful in this, it might be possible for a few of the nurserymen to form an organization after the style of the Manufacturers' Lloyds, and if so, these data would be a necessary prerequisite to that also.

With these ends in view I had considerable correspondence with a business friend in New York, an insurance broker by occupation. He is really an expert upon matters of this sort, and has access to the records of most of the old line companies. He thought he could procure the statistics we wanted and offered to do so for $100. I wrote a few of the nurserymen to ask if they wanted to subscribe $10 apiece to defray this investigation. Nearly all replied favorably and I told my friend to go ahead, but he found, upon attempting it, that it was quite impossible to compile separate data of the losses upon nursery cellars, as there were no separate records of them, so my investigations along these lines are without results.

When I found I was expected to say something on the insurance question here, I also sent out some letters to a few of the leading nurserymen, asking for information about the rates now required in their several localities upon both their own properties and, for the purpose of comparison, upon other risks of apparently no greater hazard. The information obtained has not proven to be very valuable, for the reason that there seems to be no uniformity of rates in different localities.

In a general way, however, the rates upon nursery cellars and their contents do appear to be unreasonably high. It would seem to an outsider that nursery cellars are a much safer risk than barns or other farm buildings, and yet the rates upon the former two are two to five times as great. The average barn always has a litter of hay, straw, or some such inflammable material, has wood floors; the farmer frequently has to go to it after dark with a lantern; if he drops a match or a spark from his pipe, or if the cow kicks over the lantern, the material for a conflagration is right at hand. The nursery cellar has a dirt floor; if burning matches are dropped on it they go out. It is seldom necessary to go to a nursery cellar after dark, consequently lanterns or portable lights are rarely carried into them.

I have also tried to draw some comparison between the rates upon nursery stock in storage and the stock of dry goods stores. It is difficult to make a satisfactory comparison because conditions vary so greatly and rates in different localities vary a great deal even when under about the same conditions. In general, however, the rates demanded upon nursery stock in storage average about the same as the rates upon dry goods stocks. The injustice of this is manifest. There is practically no risk of smoke and water damages upon nursery stock, whereas in dry goods stores the greater part of the damage is usually from these causes. Nursery stock is not easily inflammable and at the time of year when it is in storage the bankings are kept so full of moisture that fire would be very slow in getting under way. These conditions are entirely different in dry goods stores.

I think everyone will admit that most of us are paying much higher rates than are equitable, but what we are going to do about it is not so easily determined.

There has been some talk of forming a mutual company. There are in the United States about 2,000 mutual insurance companies in good standing, but I know of none which attempts to do business over so large an extent of territory as would be necessary in order to take in the majority of the nursery cellars. Most of them are simply county organizations, or, at the most, cover only a few adjoining counties.

The difficulty in doing business over such a wide territory is that the expenses of inspection and of adjusting losses upon such widely scattered risks would be very high in proportion to the amount of business done.

I believe that mutual companies which have tried to do business over a considerable extent of territory have not, as a rule, been very successful. An organization was formed a few years ago among the florists for the purpose of insuring greenhouses, but it was very shortlived, remaining in existence only about three years, I think.

Another objection is, that no purely mutual organization which we might form could safely write amounts that would anywhere nearly cover some of the risks that would be offered. There are quite a number of houses that would need to carry $25,000 to $50,000 on their stock in order to be even approximately covered, and a few who want $75,000 to $100,000. In my humble opinion, even $10,000 would be too large a sum to be safely written on one risk by any mutual organization of our own; indeed, it is difficult to get more than $5,000 from any one of the old line companies.

I believe that relief, if we ever get it, is coming from mutual companies, but from those already in existence, rather than by forming one of our own. I learn that many of the nurserymen who are located in small places, especially in Michigan, are obtaining insurance at very low rates from some of the numerous Farmers' Mutual companies. Many of these companies have been in successful operation for a long time, and furnish very cheap and safe insurance. The amount accepted by any one company upon a single risk is usually small, but policies of $2,000 to $3,000 may often be obtained in several different companies. Since I commenced investigation for the preparation of this paper I have found where we can place up to about $18,000 upon each of our two cellars in good mutual companies, and I think it will soon be possible to do likewise almost everywhere.

In a recent conversation with a mutual insurance man in Syracuse, I was told that the field of mutual insurance companies is soon to be greatly broadened. There is at present a national association of co-operative insurance companies, whose president is W. D. Forbes, Des Moines, Ia. This is an organization whose present field seems to be simply the calling of delegate conventions and attending to any matters of general importance in connection with mutual insurance. It does not exercise any jurisdiction over the business of the various companies.

I am assured, however, that there is a movement on foot whereby the larger mutual companies will be brought into closer relations with each other, so that the agent of one company may also write business in many others, and by thus dividing the properties among a number of companies, be able to safely cover quite large amounts.

This matter is to be taken up at the next meeting of the national association, which occurs very soon now, and my informant seemed very confident that this new organization would be perfected and ready for business by the first of next year.

I have had quite a lot of correspondence in connection with this topic, but have not been able to dig up any ideas of special value. I have not anything definite to suggest, except that perhaps it may be as well to wait and see what is done by the national organization of mutuals. I trust something more valuable may be brought out by the other gentlemen.

Holland Bulb Crop.

Notwithstanding the many contradicting reports that have been published in regard to the prospects for this year's bulb crops, it remains a fact that the outlook in many places is far from promising, and although it may not at first affect prices as much as it would do in ordinary seasons, the effect is sure to be felt later in the season, and at any rate it will take away any chances for a glut in the market like there was last year. No doubt the fine and warm weather that we have had for the last two weeks has very much improved the condition of the ground, and if the month of June should give us a further good dose of warm weather, it must work favorably upon the ripening of the bulbs in the ground even if it should not make them grow any more. —Dutch correspondent, Horticultural Trade Journal.

Buffalo.

News of the Week.

On Tuesday, Anderson filled an order for a large standing scroll, ordered by the Erie County Board of Supervisors as a tribute to the deceased clerk of that body.

On Wednesday of last week J. H. Rebstock handled a wedding decoration of unusual character and pretensions, considering the small spaces treated. It was in one of our North street mansions. A free treatment of the large hallway of the house for begetting a chapel effect was given studied attention, in a liberal overhead covering of the ceiling and a second festooning of Asparagus plumosus entwined with white roses. Other details of colonial columns employed, decorated candelabras, with ribbon spaced portions, combined with fitted settings of choice specimen plants, lent an unusual effect to the whole, which elicited much approbation.

Palmer & Son executed a decorating order in Bradford, Pa., last week. Arthur Beyer, of the establishment, attended to the working details, being absent four days on the same. Fifteen hundred lily of the valley sprays were employed, largely in a canopy effect, in the dining room, and for table decorations were combined with white roses and asparagus. The parlor of the large home in which the ceremony was performed included a church altar effect, all in white and green. White columns introduced specially lent character, in their free decorating of white roses and peonies, which blooms, besides asparagus, were largely used. A finishing treatment of fine textile cording, arranged in a novel style, added a fitted charm to the arrangement. The book cases and mantels in the library were surmounted with bankings of red peonies. An advantageous feature here for further decorating as done about the house, was gained in using mountain laurel branches and foliage, now in full flower on hill-tops so near by, that the stock could be gathered the day of using.

The bedding plant trade continues active, and in a call that assures all good stock cleaning up closer than for some years, while as a rule satisfactory prices are being obtained.

Louis J. Neubeck, who has been conducting the George Troup (formerly known as the Webb houses) growing place at Corfu, N. Y., during the past year, as a supply for his retail needs, has relinquished his lease and occupancy of same. The new tenant, Wm. Ehmann, now less than two years a resident of this country, demonstrates his faith in American interests.

The store on Main street directly opposite Forest Lawn Cemetery entrance, formerly conducted in retail florist lines, but for some time vacant, has been reopened by J. W. Shaw, who was formerly connected with the cemetery under Superintendent Troup.

Palmer has inaugurated a Saturday half-holiday for his store employees, alternately during the three Summer months.

Mr. and Mrs. W. F. Kasting spent last week in the vicinity of Richmond, Va., he being interested in the doings of a convention of a fraternal order holding in that city.

A plant of Adiantum Croweanum, under the care of Peter Crowe, of Utica, N. Y., was seen here last Saturday. This novelty has the appearance of a coming winner.

VIDI.

GENEVA, N. Y.—The R. G. Chase Company has practically finished moving their office from Main to Pulteney street into their new building. For some time the old building on Main street has been altogether too inadequate for the needs of the growing business. The Pulteney street building is situated adjacent to the nursery grounds and in this respect will effect a great saving in time. The structure has been put up with a special view to the nursery business, so that in all respects it is thoroughly modern and finely equipped. The offices will be all arranged in one commodious room.

CANADIAN NEWS

Ottawa.

News Jottings.

After weeks of dry weather the rain has come. What a pleasure now to look at the carnations in the field and see them regain their rich color. They are starting off rapidly, and with the quantity of rain we have had no further fear for them throughout hot July need be experienced.

The Spring trade is over. Business has been far ahead of that of former seasons. Veranda boxes have made rapid strides and, I should say, trade in these has doubled itself. Next noticeable has been the demand for scarlet geraniums. All good geraniums have brought $1.50 per dozen. Cannas and caladiums have had an increased sale. The demand for carpet bedding plants has greatly decreased. Alternanthera will be to spare. Tuberous rooted begonias are becoming very popular and good plants have sold at $2.00 and $2.50 per dozen.

The Government Improvement Commission is bedding out large quantities along the beautiful driveway made around the city.

The city parks are looking very fine this year; Major Hill Park is a little beauty, and I do not think it can be equaled in Canada. Located at the foot of Parliament Hill it gives a view of the buildings, the Ottawa River and valley of the Chaudiere Falls and the country round for miles. Its new conservatory is very fine and the bedding out up to date. Parliament Hill, with its many beds and grand surrounding scenery, is a great resting place. Rockliff Park, about a mile from the city, is a grand natural park. In the hands of the present superintendent it is improving year by year. This is the popular recreation place of the city.

Our city fathers are even doing something to boom the decoration of the city, having placed boxes of flowers on each window of the handsome city hall. So, I am glad to say, we are climbing upward.

Business is still fair; lots of weddings and some funerals and a fairly good demand use up all stock. Carnations, and what roses there are, still show fair quality, Ethel Crocker and Glacier being the best at this time. Peonies have sold well at 75c. per dozen; but the varieties around Ottawa are not of the best. Palms from Europe seem to be slow in arriving.

R. Wright's new store and conservatory are nearing completion.

Having got through with fires, drouths, and Spring rushes, we shall turn to building and conventions for amusement.

E.

TORONTO.—Business in shrubs, hardy perennials, bedding plants, and cut flowers, during the past few weeks has been very good, and most of us have had a little time for anything but business. In bedding plants quite a number of the growers are sold out; all have had a good season and are likely to clean out everything before the end of the month. Prices have been a trifle higher than in former years. The cut flower trade has been, and still is, good. Roses and carnations are plentiful. Dunlop is sending in fine American Beauty roses; Lawrence, Golden Gate, and Dale some good Canadian Queen, which is a very taking variety and lasts well.

We have had considerable dry weather, but during the last few days have experienced several fine rains. The ground is in good condition, and most stock in the fields is looking very well. Carnations, which had rather a hard time at first, are now growing finely; the same may be said of violets. A considerable quantity of pansies and other outside flowers have been used this season, and hardly any really good stock has been wasted.

William Hill, of Yonge street, is showing a well-flowered plant of Oncidium incurvum in his window; the sprays are nearly six feet in length. Dunlop has been showing a few nice flowers of the native Cypripedium spectabile. These are quite as choice looking as any of the exotic varieties.

The Horticultural Society will hold a rose and flower show in St. George's Hall next Tuesday, June 23. The officers are working hard to make it a success. No charge will be made at the doors, but admission will be by ticket. The show is likely to be a good one.

THOS. MANTON.

Review of the Market

NEW YORK.—There has been such a shortening up in the supply of cut flowers since Monday that prices of nearly all kinds of stock have stiffened considerably. It is evident that growers of roses have begun to throw out their old plants in good earnest, and that the carnation benches are nearing the end of this season's yield. Outdoor flowers are also coming in in but limited quantities, and, taken altogether, we would estimate that within the last three or four days the supply of flowers has diminished more than 50 per cent.

American Beauty roses of the best grades have advanced to $3.00 per dozen again, and special Bride and Bridesmaid touch the 8c. mark occasionally, though about 6c. is the ruling figure. Some fairly good Liberty are coming in, and the better grades are fetching from 10c. to 15c. each.

Carnations have advanced in value quite perceptibly, some of the best Mrs. Lawson going as high as $3 per hundred. White varieties are quite scarce; more of these could be sold if obtainable.

Sweet peas are in better demand and a general advance in prices has resulted. These flowers are mostly sold in bunches, and it is noticeable that the size of the bunches has decreased materially lately.

Longiflorum lilies have also taken an upward turn. While inferior flowers can still be had at 3c. or 4c. each, those who want good blooms have to pay 8c. for them.

The call for green of any kind has diminished to almost nothing; neither smilax, asparagus nor adiantum is selling satisfactorily. Lily of the valley is firm in price, the supply not being in excess of the demand.

Some fine varieties of Japanese iris are arriving, also a limited supply of delphiniums and gladiolus.

ST. LOUIS.—Shipping conditions are more favorable this (Tuesday) morning. All of last week our wholesale men had a hard time getting in their consignments, as nothing could come over the bridge, and the only available route was from Alton, Ill., by boat, which often arrived late in the day. Most of the flowers came in in bad condition, having been on the road too long.

At the same time, the trade was very brisk, on account of school work. Several large weddings and funerals called for more work than the trade could handle under the above conditions, much of the work was made up of Cape flowers, sweet peas and galax leaves.

The report to-day is that the express companies are again receiving shipments and the chances are that by the end of the week all cut flower shipments will be delivered on time. The water on the east side is falling fast, and the flood which threatened to stop the wheels of commerce in St. Louis is about over.

First-class stock is now out of the question in this market; and the price asked for some of the stock is really too high considering the quality. The cool weather of last week cut down the local supply considerably. The best roses are selling at from $5 to $6 per hundred, seconds at $3 and $4, with Bride and Bridesmaid still badly mildewed. Meteor came in too open to sell well. Perle des Jardins are the best roses now on the market, some 3,000 of these were used last week for school work. Kaiserin Augusta Victoria also came in full blown, which makes them practically useless. Good American Beauty are very scarce now, and the few that arrive bring from $2 to $3 per dozen. Sweet peas are of a great deal better quality this week and are also in big demand, at 50c. per hundred, with plenty of them in the market. Good carnations are always in demand but are now coming in very small, with the price still up to $1.50 to $3 for good common stock. A few fancies go at $5, but very few of these are in the market. White and Daybreak have the best call.

The Third street commission men were greatly surprised at the big call for Cape jasmines the past week, but this was owing to the scarcity of other white stock. The street corner merchants handled jasmines by the thousands, as no stock was to be had at the wholesale houses. Fancy ferns are again scarce. Smilax is selling well at $15 per hundred.

The past week ended the season for the florists, and from now on alterations and rebuilding will be in order for the growers, and the retailer will look up old accounts. ST. P.

CINCINNATI.—American Beauty roses from new stock grown by the Heller Brothers, of New Castle, Ind., are now arriving and sell at $1.00 per foot. Bride and Bridesmaid and Golden Gate are selling clean at 3c. to 6c. Franz Deegen brings 4c. to 6c., Liberty 4c. to 6c. Carnations realize $1.50 to $2.00, and there are not enough to go round. Sweet peas, owing to the wet weather, have not been good, but are improving in quality; they sell at 50c. per 100. Plenty of smilax, asparagus, and fancy Eastern ferns are available. E. G. G.

INDIANAPOLIS, IND.—The sales of this week have been lighter than those of the week previous, but taking everything into consideration trade has been fairly good. There is a scarcity of funeral work, but many small weddings and receptions have kept the retailers busy.

Roses are of somewhat better quality than in the preceding week, but a great deal of the stock is small and mildewed. No. 1 Bridesmaid and Bride are scarce and sell at 4c. to 5c.; seconds at 2½c. to 3c. A few La France and Souvenir du President Carnot are to be had at 8c. to 10c. Liberty are good and sell at 10c. to 20c. Kaiserin Augusta Victoria are coming in in fine shape, going at 6c. to 8c. American Beauty are poor, and there is small demand for them, at 5c. to [illegible].

Bridesmaid and Bride retail at 75c. to $1.50 per dozen; La France, Carnot and Kaiserin, $1.50 to $2 per dozen; Liberty, $2 to $4 per dozen; Beauty, $1.50 to $5 per dozen.

Carnations are weak and small. Good carnations can easily be disposed of, but the poorer varieties go a-begging. The better grades wholesale at $1.50 to $2 per hundred. The retail price is 50c. to 60c. per dozen.

There has been no rain lately and sweet peas are of better quality and quantity; white and lavender color are in greatest demand, at 50c. per hundred.

Good Lilium auratum are to be had in this market at $1.50 per dozen. I. B.

SAN FRANCISCO.—There has been no let up in trade since the Memorial Day revival. Seasonable blooms are in abundant supply and prices firm. Wedding pieces, memorial tributes for funerals, and pretty designs for girl graduates and commencement day decorations, was the work in hand witnessed at a late hour at the stores of Sievers & Boland, Frank P. Shiberley, Frank Pelicano & Co., E. Rosaia & Co., Shanahan Florist Co., V. Matraia & Co., Charles C. Cohen, and at Charles Strappenbeck's American Florist Depot.

Romneya poppies and Japanese iris are the new-comers this week. Either are going well at $1.00 a dozen, the poppy at this price being 3½ and 4-foot stemmed. Bride and Bridesmaid roses run from $1.00 to $1.50 the dozen, and good carnation stock, notwithstanding the great abundance of same, is bringing 75c. to $1.00 the dozen, excepting such as classify with the Hanna Hobart, A. B. Spreckels and Whitelaw Reid, which are ready sellers at $1.50. Sweet peas are extravagantly plentiful, but prices per 100 are being generally maintained at from 75c. up. Peonies are not scarce, and are being held well at $1.00 a dozen. The lily family, and it never looked better, is many a good help to the retail trade. Callas and Harrisii move well at from 75c. to $1.00 a dozen. ALVIN.

BUFFALO, N. Y.—A kind of mixed business has been the rule at the leading stores recently. Some wedding orders, but only a few, with funeral work helping in cases, have combined to make an average volume. In quantity the stock of flowers has diminished, with quality also at lower ebb. The President Carnot rose makes a good impression; its light shade of pink is always pleasing, while adapting it to many purposes anywhere. Peonies are in full local supply just now. Spanish iris in various colors, outdoor grown, are attractive and popular. A. N. Pierson of Cromwell, Conn., is contributing some specially nice lily of the valley that commands an approach to fancy prices. VIDI.

DENVER.—Trade the past week has been rather quiet, the annual ball of the University Club on Friday doing a little to help along. The decorations for this affair were only ordinary, palms and greens being the chief materials used. Flowers are coming in heavily, carnations particularly so, but as yet good prices are asked. Roses are plentiful and the cool weather of late has helped the quality, stock keeping well. Indoor sweet peas are still abundant and will have to hold out quite awhile yet, as the outdoor peas will be late. Smilax is scarce, strings being cut that are yet hardly right, while asparagus, both Sprengeri and plumosus, is in good supply. P. S.

BALTIMORE, MD.—Last week, up to Thursday, was the dullest yet this season. Roses were in abundance with very few buyers. Carnations hold up in quality, the supply has decreased very much and is not equal to the demand. The quality of roses, with a few exceptions, is poor. Outdoor sweet peas are coming in fairly plentiful. Too much rain has been hard on Maman Cochet roses which are being cut from outside. J. J. P.

WASHINGTON, D. C.—Business has been very good the past two weeks. Decoration Day was a record-breaker, everything that looked like a flower went. Trade for June is looking bright with orders booked ahead for wedding decorations, commencement bunches, etc. Outdoor stock is in the best of shape. We are getting just sufficient rain to keep this stock in good condition. W.

CHICAGO.—The general tone of the market is about the same as a week ago. The supply is not so large. American Beauty are not very plentiful, and those coming are not of the [illegible] extra quality. Good flowers of the [illegible] find ready sale at from $[illegible] to $[illegible] per dozen for first quality. Other grades are priced at from $[illegible] per 100 [illegible]. Bride and Bridesmaid are not nearly so plentiful and the best grades are quickly bought up at prices ranging from [illegible] to $6.00 per 100. Inferior [illegible] goes at almost any price. Kaiserin Augusta Victoria [illegible] at from $4.00 to $8.00 per 100. Meteor and Golden Gate bring from $[illegible] to $[illegible]. Some extra fine Liberty are coming in from several of the growers and realize $[illegible] per dozen. Other grades sell at from $4.00 to $10.00 per 100. Sunrise and Mme. Abel Chatenay go at the same figures.

Carnations are not so abundant as last week and good prices are realized for the best grades. Mrs. Lawson, and others in that class, sell at from $[illegible] to $[illegible] per 100. Stock in the next grade brings $1.00 to $1.50.

Gladiolus are in increasing quantities, some of extra fine light color selling at from $3.00 to $8.00 per 100. Not so many of the Bride are on the market as in former years, this variety does not seem to take with our trade.

Harrisii and longiflorum lilies, as well as callas, are in limited quantities, bringing from $6.00 to $10.00 per 100. Lily of the valley has been in good demand and the quality has been extra; $3.00 to $4.00 per 100 was the selling price.

Peonies are not seen in so large quantities as last week and are easier to move at from $3.00 to $8.00 per 100.

Hardy herbaceous flowers are on the market, but the prices realized are not very satisfactory. R. J.

Philadelphia.

News Notes.

The retail stores are all doing a fair business for this season of the year. The work is chiefly for weddings, the number of which has been very large this month. On several days this week the stores experienced some difficulty in obtaining just the kind and quality of stock desired; while all flowers were very plentiful last week, the supply has diminished now, and business has kept up. This is accounted for by the fact that most growers are busy replanting. All kinds of roses are scarce, as also are good carnations. White flowers are in demand above other colors.

Club Outing.

The trip to Morrisville, Pa., to visit the nurseries of Samuel C. Moon, took place on Wednesday and was an enjoyable outing. There were sixty-nine adults and nine children in the party, which left this city by the steamer Columbia at 9.30 a.m. for Bristol, thence the party went by train to Morrisville. They were met at the station by Mr. Moon, and given a genuine straw ride in farm wagons to the nursery, two miles from the station. A substantial country lunch was provided, and the afternoon was spent inspecting the nurseries. The party returned by the same route, leaving Morrisville at 5.30 p.m. and reaching home at 8 p.m. John Westcott as usual had a brewing which was sampled on the boat going up and on the return. All enjoyed the trip and feel benefited by a better knowledge of evergreens and shrubs in general.

The annual convention of the American Seed Trade Association opens in Atlantic City on Tuesday next. Walter P. Stokes, of Johnson & Stokes of this city, is president. Most of the delegates will pass through Philadelphia, so that the seed firms will have many visitors. On Saturday, June 27, W. Atlee Burpee will entertain all the delegates at his Fordhook Farms, Doylestown, Pa.

DAVID RUST.

Chicago.

News of the Week.

The weather for the past week has been rather erratic; this city and vicinity has experienced some light frosts which from reports have done some damage to the tomato fields, but the frosts were not severe enough to damage florists' outside stock. A few good showers of rain are needed in and around Chicago. Several of the carnation growers are complaining of the drouth; a good many will have to resort to hand watering in a few days if rain does not come, and as there has been a much larger acreage planted this year than ever before, the task will be no small one.

Shipping trade is extra good at present and [illegible] to stand up the [illegible]. The Southern and Southwestern [illegible] mostly [illegible] work [illegible] complain [illegible] of the [illegible] good growing stock. [illegible] growers are [illegible] the [illegible] for the [illegible] stock [illegible].

The past week [illegible] Nashotah the [illegible] growers [illegible] of the [illegible]. [illegible] large a [illegible] number of [illegible] of all kinds by the [illegible] of the growers.

[illegible] of Park Ridge [illegible] A. T. [illegible] some fine Spanish iris, yellow and blue.

[illegible] Anning [illegible] some extra [illegible] Elbert, Crocker carnations, [illegible] the grower.

F. R. Hills of Morwood [illegible] sending in some [illegible] good [illegible] the [illegible] grower [illegible] some fine [illegible] Bridesmaid roses.

Outdoor grown sweet peas are coming in from several growers and are better than [illegible].

The [illegible] Club has secured rooms in [illegible] Hall, the same in which they [illegible].

A. [illegible] has improved in health [illegible] after a Winter's sojourn in Mexico and the Southwest.

The growers are [illegible] planting [illegible] more [illegible] to be devoted to [illegible] than last year.

A meeting of the various branches of the trade was held Tuesday, June 16, to devise ways and means to entertain the [illegible] as they pass through here on their way to Milwaukee. Committees were appointed with full power to act.

In the death of J. T. Anthony the trade loses one of its most valued workers, and a man who was never known to refuse [illegible] to a brother tradesman when in [illegible].

A. [illegible] had the decorations for the [illegible] wedding. Peonies and [illegible] were used with smilax and oak [illegible].

[illegible] of Vaughan's seed store is now [illegible] after a severe siege of sickness.

Alfred J. Smith, assistant head gardener at Lincoln Park for seven years, has resigned his position there and accepted one at Geneva Lake, Wis., where he has full charge of J. J. Mitchell's place. On leaving the park his fellow employees presented him with a gold watch and chain.

Edgar Sanders continues to improve and is now able to be out for a few hours every day when the weather is fine.

By unanimous vote of the faculty admiring friends of the graduates will be obliged to refrain from bestowing flowers upon this year's graduating class of the Academy of Our Lady, Longwood.

Herman Rennock was found guilty of killing his brother-in-law, Oscar Knetling, June 11, by a jury in Judge Chetlain's court and will be sentenced to the penitentiary for fourteen years.

Visitors in town: C. O. Wilhelm, Batavia, Ill.; J. J. Hess, Omaha, Neb., en route to Europe; O. Soderbom, Cromwell, Conn.; E. Haentze, Fond du Lac, Wis.; C. W. Ward, Queens, N. Y., and P. A. Freeman, Aurora, Ill.

R. J.

CHANGES IN BUSINESS.

RACINE, WIS.—M. B. [illegible] has opened a flower store at 119 Washington street.

BLOOMINGTON, ILL.—F. A. Baller is moving his greenhouses from East Bowker street to a five-acre lot which he has purchased and which is situated east of Brokaw Hospital.

CHARLESTON, W. VA.—The R. G. [illegible] Company, incorporated under the laws of the State of New York, with principal office in [illegible], with $[illegible] capital to deal in [illegible] stock, has been granted the proper authority by the Secretary of State to operate in West Virginia.

WEST BOYLSTON, MASS.—Potter & Cousins, who have carried on a general market business in West Boylston for the past few years, dissolved partnership June 8. Charles Potter will continue the business in West Boylston, and will later enlarge the greenhouses. Mr. Cousins has bought greenhouses in Leominster, and will remove there at once.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.

WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective indoors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5-pound package for nothing if you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF Co., 116, 117 West Street, New York.

A Progressive Association.

For a body of flower growers in the South who have formulated themselves into a real, live, florists' club, one that by self-manufactured plans is wide-awake and progressive, commend me to the Crystal Springs Floral Club of Mississippi. Commencing work in 1894, principally as amateurs, and by keeping vigilantly at it, many of the members have merged into florists and are working on a most pleasant and profitable basis.

Chrysanthemums appear to be a hobby with those who have successfully passed through the test as a fad, and the membership is so meritoriously prejudiced in this flower's favor, that for the Fall show little else is attempted, with the single exception of a fair sprinkling of roses. Mrs. S. H. Howell is president and Mrs. J. M. Dampeer, recording secretary.

The November flower shows held by this organization have always been of the very highest merit, and every member is well acquainted with the art of growing prize-winning flowers to the up-to-date proficiency of the art. They have attracted the attention of some of the largest chrysanthemum growers of America, and it appears that they have little to learn from any one. Such firms as Nanz & Neuner, of Louisville; Nathan Smith & Son, of Adrian, Mich., and James Morton, of Clarksville, Tenn., have all sent exhibits to the shows and not more than barely escaped with a fair share of the premiums. Mr. Newsom, the leading grower of chrysanthemums of New Orleans, acted as judge last year, and carried with him a few of his best specimen blooms to prove what culture in his city could accomplish. The flowers caused no other comment than that they were grown by the judge.

Parties who have seen their wonderful exhibits attribute the marked success first to the "eternal vigilance" of the growers, and second to the natural adaptation of the climate and soil. The soil used contains a large percentage of iron, besides being naturally loose and rich; and chrysanthemums are grown in open ground up to a certain stage when they have canvass protection, which ensures perfect foliage and blooms in the last stages of cultivation.

This club is preparing extensively for another show this year, on a much larger scale than ever before. The exhibition is attracting such attention that the governor of the State and other prominent officials are expected to be present on the opening day.

The members ship their flowers to markets to the demands of surrounding States and are beginning to be a considerable factor in the floral world of the South. S. J. MITCHELL.

Houston, Texas.

HARRISBURG, PA.—Harry Bouder and Miss Helen Marie Fleck were married here recently.

NEW HAVEN, CONN.—Edward J. Morse, florist, has been elected an alderman of this city.

AURORA, II.—J. M. Smely recently met with a painful accident, resulting in a double fracture of his forearm. He hopes to recover within a month.

NEW CASTLE, IND.—Fifteen men engaged in refilling beds at the South Park greenhouses went out on strike on June 10. They were being paid $1.50 per day and demanded $2.00. The demand was refused and new men will take their places.

San Francisco.

News Jottings.

Wedding bells are ringing merrily in California and the Pacific States. Many seasons have passed since such a number of important weddings have taken place in the month of roses in this city, State, and on the coast, as has been characteristic of the last ten days of this year's June.

J. Seulberger, the pioneer florist and seedsman, located for twenty years at 509 Seventh street, has just opened another store at 414 Fourteenth street, which will henceforth be his principal place of business, the original store to be maintained as a floral depot. This new, modern store building, of 1903 construction, is 20 x 110 feet and has an airy basement of the same dimensions that will also be utilized by Mr. Seulberger.

There is a strong probability that Uncle Sam will shortly establish a botanical station at Fresno, Cal. Last week A. J. Pieters, botanist in charge of the seed and plant division of the Department of Agriculture, arrived here from Washington and spent a couple of days in Fresno, the object of his mission being to look up suitable places to locate experiment stations for determining the adaptability of foreign plants to this soil and climate. While Mr. Pieters did not say he would establish a station at Fresno, he was very well pleased with the country.

The forty-four members of the German Agricultural Society of Berlin, who are making an inspection tour of the United States, now in California, were shown through Golden Gate Park last week. After they had finished the drive and were having a farewell look at the floral section of the park which, by the way, is under the superintendency of Florist Thomas A. Munro, secretary of the Pacific Coast Horticultural Society, Erich von Flugge, who acts as manager of the party, was asked what feature of the park interested him most. With eyes focused across the low valley expanse of flowers to the grassy hillside opposite, where yet remains in plainest view the living flower "Welcome to the President," a floral masterpiece propagated by Florist Munro, and which immensely pleased President Roosevelt when he looked upon it a month ago, the distinguished German husbandman responded to the question thus wise: "The fact that you have cultivated this glorious flower garden upon a sand hill."

ALVIN.

Lenox, Mass.

The Lenox Horticultural Society held its regular meeting Saturday evening, June 11. W. W. Woods showed over 100 herbaceous flowers, for which he was awarded a diploma and given special mention for the choice varieties exhibited. A. J. Loveless exhibited a fine lot of early vegetables, including cauliflower, peas, string beans, lettuce, beets, cucumbers, and large muskmelons. He was awarded a diploma. William Henry received a diploma for a fine collection of peonies.

The Society has prepared a very attractive schedule for its Autumn exhibit.

Milwaukee.

Messrs. Riemer & Radmer, No. 411 State street, agents of the Herendeen Manufacturing Company, Geneva, N. Y., have recently been awarded the hot-water heating contract for the new greenhouses now being erected for E. Haentze, of Fond du Lac, Wis. They will use two large Furman sectional boilers. Messrs. Riemer & Radmer are making quite a specialty of greenhouse heating, and they will install several more plants in their vinicity this year.

"THRIPSCIDE"
(REGISTERED)
GREENHOUSE FUMIGATING POWDER
is the newest and best article on the market to-day for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of Green Fly and Thrips. There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:
1 lb. Tin Can . $0.25 25 lb. Sealed Box $4.50
5 " " . 1.00 100 " " " 16.50

ST. P.

BRIEFS FOR BUSY FLORISTS.

CINERARIAS.—As soon as the seedlings are large enough to handle they should be put into small pots and grown along on a shaded side of the greenhouse. If one has a frame convenient, facing the north, that is the ideal spot in which to grow the cinerarias through the Summer months. If there are snails in the neighborhood of the frame, a strict watch will be necessary to keep them away from the plants; and an occasional dusting of the sides and bottom of the frame with air-slacked lime should be done in order to keep the snails out, as they love to feed on cinerarias.

ARDISIAS.—Young stock of these should be kept growing as briskly as possible, and, if it is convenient to devote a bench to them, plant them in three or four inches of soil and they will do better than if kept in the pots all Summer. They will also do quite well if planted outdoors, providing a bed with moderately light soil be prepared for them. The older ardisias—those that are coming on for next season's sales—will be benefited by a little weak liquid manure afforded them about once a week.

ASPIDISTRAS.—This is a good time to increase the stock of these decorative plants. Knock a few old plants out of their pots; shake the soil from the roots, then cut each leaf apart, with a portion of root attached. Pot the pieces in three-inch pots, and put them in a warm palm house, where they will go right ahead.

Ivory Soap.

(130) Use a small cake of the soap to five (5) gallons of water. This will keep down the thrips.

Dusting the foliage with sulphur is the only remedy for mildew, so far as our experience goes.

The Week's News.

We are having a protracted spell of cool, rainy weather, which is quite unusual for this city at this time of the year. Business conditions in the retail line do not assume their normal state for June; and it is due only to the great curtailment of the flower supply that prices have taken such an upward turn.

Rudolph Asmus, who for thirty-seven years has been a wholesale grower in New Durham, N. J., and who we stated recently had sold his greenhouse property, has purchased land at Bogota, N. J., and will erect a dwelling thereon, where he will live and enjoy a well-earned rest from his labors.

Herman Schoelzel, who recently purchased the greenhouse property of Mr. Asmus, at New Durham, will, until the first of August, maintain both his newly acquired establishment and the one on Union Hill that he has been operating for some years. After the date mentioned he will devote all his energies to his New Durham greenhouses only.

Geo. Stumpp, of the Stumpp & Walter Co., seedsmen, Barclay street, with Mrs. Stumpp, sailed on Friday, June 19. for Bermuda. The visit to Bermuda will be a brief one only, and upon their return Mr. Stumpp will sail for Holland, in the interest of the firm's bulb business.

A certificate of incorporation was filed in Albany, June 13, with the Secretary of State by the United States Cut Flower Company, of New York City; capital $600,000. Directors: D. De Wolf Wever, G. C. St. John and A. H. Mattox, of New York City.

D. Y. Mellis, whose establishment is located near Holy Cross cemetery, Brooklyn, lost a great many plants of alternanthera, owing to the dry time and the scarcity of water during the first week in June.

J. I. Thielmann has been spending a few weeks in Chicago, Milwaukee, and other Western cities.

Mr. Charles Zeller, the veteran florist, continues in very poor health, we are sorry to say.

George Hildenbrand, the popular salesman for John Young, is a happy father. The boy arrived on the 15th inst. at 3 a.m. Mother and son are doing well.

Max Roth, a Jewish young man, 19 years of age, and for the last six months in the employ of James McManus, died suddenly last Sunday morning at his home in Thirty-first street. The young man was well known to the wholesale flower trade of the city, and was a member of Company B, Ninth Regiment, N. Y. V. When he left work on the Saturday evening, he appeared to be in his usual health, but on Sunday morning he was found dead in his bed. The doctor called in diagnosed the cause of death as cerebral hemorrhage.

Wm. Elliott & Sons have installed electric fans in their auction room; and we can keep cool now, however warm the weather or the bidding may be. The last sale of the season will occur on Tuesday next, June 23, when a lot of grand palms will be sold under the hammer. The palms are from Charles Zeller & Son and David Clarke's Sons, and are reported to be in first-class condition.

B. Suzuki, of Suzuki & Iida, left for Japan, via Vancouver, on Friday, June 19.

The date of the outing of the New York Florists' Club is now less than two weeks away, and those who intend going had better procure their tickets at once.

Vaughan's seed store report a very good wholesale trade, but a falling off in the retail line, this latter condition being, no doubt, a result of the cool and wet weather that has prevailed lately.

John Kral, salesman for Moore, Hentz & Nash, is enjoying a three weeks' vacation on his farm at Portchester, N. Y.

Hicks & Crawbuck, the Brooklyn wholesalers, have added florists' supplies to their cut flower trade, and are now carrying a full line of all such goods as are generally used in the retail florists' business.

R. Vincent, Jr., White Marsh, Md., will be in New York on Monday, June 22, and on the day following will sail on the Cunard line steamer for Liverpool, accompanied by Mrs. Vincent.

J. S. Wilson, manager of Vaughan's greenhouses at Western Springs, Ill., is expected in the city this week for a short stay.

W. Kervan has discontinued the wholesale flower store in Twenty-ninth street after a few days' trial. A card in the window states that he has gone back to No. 24 Twenty-ninth street.

William Scott, gardener to Mrs. Thomas Eastman, Tarrytown, N. Y., sailed on the Lucania Saturday, June 13, and will make a visit to his parents in Scotland.

J. T. Lovett, Little Silver, N. J., is operating three retail stores, one each at Long Branch, Elberon, and Lakewood, N. J.

Cincinnati.

The Week's News.

Business for June is holding up nicely, and everything is selling, and at fair prices. Roses are now of better quality since the extreme hot spell is over; and the few cool days and nights will give the plants a new start. Mildew is to be dreaded now; we are getting really fine Bride and Bridesmaid that are badly affected, and, of course, they have to be sold cheap in order to move them.

Annual Election.

Saturday evening the Cincinnati Florists' Society held its annual election for a new board of directors, which resulted in the following gentlemen being chosen: C. J. Ohmer, Ben George, George Murphy, William Schuman, and Louis Kyrk. Committees were appointed to make arrangements for our annual outing, and to select a route to travel to the annual meeting of the S.A.F.O.H. at Milwaukee. The outlook now for the attendance from this city is very good, and if those tributary to Cincinnati will join our delegation, we shall endeavor to make the trip as pleasant as possible. A letter addressed to George Murphy, or to E. G. Gillett, will bring all the necessary information.

On July 9 the first of the outdoor meetings of the Cincinnati Florists' Society will be held at the residence of D. Rusconi, Covington, Ky. Everybody is invited, and a genuine Italian spread is promised. Mr. Rusconi wants a big crowd. Richmond, Ind., people take notice, and act accordingly. Other outside friends in the craft are also cordially invited.

John C. Meyer, of Boston, Mass., he of silkaline fame, was a recent caller.

E. G. GILLETT.

Indianapolis, Ind.

News Notes.

Henry Reiman has had quite a bit of work for the Modern Woodmen of America, who are now holding their convention in this city.

John Bertermann accompanied the Indianapolis Maennerchor to St. Louis. He expects to go from there to Chicago on business.

At the establishment of Smith & Junge may be seen an arch of Crimson Rambler roses which is certainly a beauty. The arch is over eight feet in height and five feet wide, and one mass of bloom. The firm is trying to induce a number of matrimonially inclined couples to use the arch as a marriage bower free of charge.

J. A. Everitt, of the Everitt Seed Co., is promoting what has been termed a Farmers' Protective Association. The object is to keep in close touch with the grain markets of the world and thus be enabled to dispose of grain at a more advantageous time and with more profit than formerly. The project so far has met with success.

I. B.

Washington, D. C.

News Notes.

Shaffer, of Langdon, D. C., is cleaning out some of his houses and commencing to plant them with roses, such as Golden Gate, Bridesmaid and Kaiserin Augusta Victoria. He has about 10,000 carnations in the field looking at their best.

George Fields has cut some of the finest Ulrich Brunner roses I ever saw; the stems averaged 24 to 36 inches in length, and the flowers were superb.

George Cooke is doing a very steady business on Connecticut avenue.

Wolf & Ridenour are also doing a profitable business at their new location.

Those interested in bowling are requested to be at the alleys (rathskeller) every evening, commencing Monday, June 15, at 8 p.m., by order of Captain Ernest.

There was an interesting time here on the 19th. A match game between the Philadelphia, Baltimore and Washington bowlers for the championship and prize cup, known as the "Kramer Cup," standing 23 inches high and valued at $50.00. F. H. Kramer is the donor.

An Envelope in Flowers.

J. R. Freeman made a very beautiful design last week in the shape of a mailed envelope. The design was 5 feet wide and 38 inches high, on an easel, with a U. S. stamp worked out in flowers on the upper right hand corner, and the name of the deceased on the envelope. A small cluster of gardenias was placed on the lower right-hand corner, and on the left upper corner was a cluster of short American Beauty roses tied with ribbon. The deceased was employed in the post office department. The design was sent by his fellow-workers. W.

St. Louis.

Florists' Club Meeting.

The club meeting last Thursday was poorly attended, only ten of the regulars from the city being present. Our Belleville and Edwardsville members were prevented from coming, owing to the high water and no travel over the bridge. Secretary Schray could not attend—too much business kept him at home. President Dunford opened the meeting at 3 o'clock, with J. J. Beneke acting as secretary. It was announced by the trustees that they had made arrangements to hold the annual picnic of the club at Priester's Park on Thursday, July 23. A program of games of all kinds will be made up with prizes; a band of music will also be engaged and dancing will be indulged in. The programs and invitations will be mailed to all in due time.

Chas. J. Juengel was appointed on the transportation committee to see the railroads as to rates to the Milwaukee convention. Mr. Jeungel would like a list of the names of those going as soon as the members make up their minds.

He is also working on his report as State vice-president of the S. A. F., and the members are requested to make up their yearly business report and send it to him at latest by next meeting of the club.

The club will hold its next meeting at Kirkwood on the invitation of Wm. Winter, who promises everybody who attends a good time. The nomination of officers will take place, an essay by Fred C. Weber on "Benefits Derived by Attending Conventions" will be one of the features. President Dunford and Mr. Winter expect the attendance will be the largest of the year. This meeting will be held Thursday afternoon, July 9, at 2 o'clock, so the members should start by 12 in order to arrive in time. Visits will be made to the other florists living in the neighborhood.

News Notes.

F. W. Taylor, of the Horticulture Department, who attended the nurserymen's convention at Detroit last week, is back; so are the Webers and George Sailer. They report a great time and were sorry that they could not bring the next meeting to our city; but the majority wanted Atlanta. All came home happy, as Frank Weber had the honor of being elected vice-president of the association.

J. G. Bennett, who represents the Commercial Cut Flower Box Company of Binghamton, N. Y., called the past week to interest the craft in cut flower boxes. The young man met with good success.

Mrs. M. M. Ayers, Grand avenue, had a busy week with all kinds of work. She furnished one of the biggest wedding orders of the season. It kept Will and Chester hustling to get enough white roses, which numbered into the thousands.

A call at the Ellison establishment found everybody busy. They report that they used some two thousand Perle des Jardins roses for one order last week. Their present location is much better for business than the one vacated by them some time ago.

Alex. Siegel, Fred Foster, John Burk and the Hon. Mr. Potts make a great quartet at the wholesale houses every morning. Funeral work is their great specialty. They are out early and often.

ST. PATRICK.

Denver.

It is now almost certain that Denver will be well represented and also put in a bowling team at Milwaukee. The six constituting a team have promised to go, and one or two from Colorado Springs may join the party. Al. Mauff, our best man, has been doing good work on the alleys all Winter, and will have to show us the way at Milwaukee. Besides Mr. Mauff, Gus Benson, Bob Kurth, J. A. Valentine, Emil Glauber, and Phil Scott will make up the Denver team, all new ones to a bowling tournament but one, who looks forward to a friendly argument on the alleys once more with Kasting, Beneke, Kift, and a few other captains.

P. S.

Worcester, Mass.

Jottings.

Wild flowers have become quite a fad, and are freely used for decorations in place of cut flowers. Laurel in a large measure has superseded roses and carnations. An evidence of this was seen in the First Universalist Church, June 9, at a large wedding. H. F. Littlefield had charge of the decorations. The principal feature was a solid bank of laurel extending from the choir gallery to the edge of the platform. The pews also were trimmed with the same flower. For the house decorations Mr. Littlefield furnished pink roses and carnations.

Potter & Cousins, of West Boyleston, also had a church wedding last week. The decorations were reported as very fine.

June 14 was children's Sunday, and many of the churches followed their usual custom of giving the smaller children a potted plant. CAROLUS.

Cumberland, Md.

John Krout, aged 44 years, fell down a staircase at his home in Ridgely, W. Va., just opposite Cumberland, on June 8, and broke his neck. He was a native of Germany and was engaged as a florist and landscape gardener at Riverside Park here.

LOCKLAND LUMBER CO.
LOCKLAND, OHIO.

Reading, Pa.

This city is keeping well up with the general advancement in horticulture, and during the past six years has spent considerable money in laying out and improving its park system. The principal work done has been at Penn Park, which is located at the upper end of the city at the foot of the mountain. Nature has made a good provision in placing this mountain as a background and working from this Charles Gindra, the superintendent, has done some grand work in planting choice evergreens, and laying out flowers gardens, also basins for tender water lilies.

The past Spring the bulb display was a grand one. The beds were planted chiefly with hyacinths and tulips. The planting showed much forethought and artistic taste, as the designs were all good and the colors well blended. Pansies are used here very extensively, and the pretty and useful flowers are planted in a way seldom seen. When sowing the seed all colors are kept separate, and the beds are all planted out in designs. The plants are put closer than is usually seen, and the effect produced is grand, proving that fine results can be obtained if good judgment be exercised. The hillsides back of the flower gardens are thickly planted with broom and gorse, and these, with their yellow flowers, produce a grand effect in the Spring.

There are three large greenhouses used for propagating and growing bedding plants, and ornamental foliage plants, which are all used in Summer around the park.

This city is fortunate in getting large returns for the amount of money expended, and the public shows much appreciation, as at the time of my visit there were lots of people admiring the flower beds and asking information—taking even more interest than is often seen in larger cities. DAVID RUST.

SHIRMANSTOWN, PA.—J. F. Rupp is having new benches installed and hail guards put in place over his six greenhouses.

FOLEY CAST IRON GUTTER

This cut is not full size. We make two sizes: $2\frac{7}{8}$x5 inches and $2\frac{7}{8}$x$6\frac{1}{8}$ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

SEED TRADE REPORT

ASTER COSMOS PANSY SALVIA ZINNIA
BEANS CLOVER GRASS ONIONS PARSNIP

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

WINCHESTER, KY.—The grain and seed warehouse of D. S. Gay was burned June 14. Loss, $100,000; insurance, $75,000.

ST. PAUL.—A brisk trade in millet and occasional calls for corn have been the features of the trade the past week. A local house shipped two carloads of seed potatoes to Texas a few days since.

L. L. May and family have moved to Mayfield farms for the Summer. Owing to the illness of Mrs. May he was prevented from attending the convention at Atlantic City. VERITAS.

DUNKIRK, N. Y.—The second annual outing and banquet of the Lake Shore Seed Co.'s travelers was held at the Oakdale Hotel, Point Gratiot, on Saturday, June 13. Through the inclemency of the weather the parlors of the hotel were used instead of the green lawn. Singing, dancing, cards, etc., were indulged in and specialties were given by D. Morey, of Brocton, imitations of steam piano; Ed. Obertriefter, of Fredonia, Dutch songs; D. Ferguson, of Stockton, fancy step dancing; Hy. Weekes accompanied on piano. Refreshments were served during the afternoon. At 8 o'clock the dining room was opened and all sat down to a well-supplied table.

The following were present, who represent the company in over half the United States: R. W. Wright, F. Kauffman, T. T. Light, H. Weekes, A. Delahoy, R. Ayers, C. A. Snow, C. N. Wilcox, E. Card, J. Murray, D. Ferguson, C. Kauffman, D. Morey, Ed. Obertriefter, Ed. Miller. Letters of regret were received from several who, through other duties, could not be present. After dinner, R. W. Wright gave a brief talk on his recent 6,000 miles Western trip. Thanks were given to A. Delahoy for his capable management of such an enjoyable day.

The seed plantations around San Jose, Cal., are said to receive $3,000,000 a year from the sale of seed. The first experiment of the planters in this line were made less than half a dozen years ago. One onion patch now covers 3,000 acres, with furrows almost two miles long. A single plot of sweet peas occupies 800 acres, a bed of asters 210 acres, a lettuce bed 2,100 acres. There are within a radius of eighty miles around San Jose 14,500 acres devoted to raising plants and flowers for their seed alone.—New York Times.

European Notes.

During the past few days the much-needed rain has fallen, and although very partial in its visitations, the districts affected have benefited considerably. What we need now is sunshine to develop the seed-bearing properties of our plants. It is a far cry yet to harvest time, and, so far as we can now judge, it will be quite as late as last year. The whole of Europe is affected in the same way; if there is any difference the south is the most backward.

The reviving interest in Spring flowers has given an impetus to cultivators of some of the most popular perennials and biennials. As a result, we have the beautiful strains of papavers, pyrethrums, aquilegias, gaillardias, and delphiniums which have lately graced the tables at our Spring exhibitions. Of the five items named the greatest advance appears to be in connection with aquilegias, and those who were fortunate enough to see the magnificent display of the long-spurred hybrids from Cannell and Dobbie at the last meeting of the Royal Horticultural Society were both astonished and delighted at the size of the individual flowers, and the great variety of colors. These plants are so easily grown that no garden need be without them.

EUROPEAN SEEDS.

Pansy Seed. World's Fair Mixture. NEW CROP Ready July 1.

SHELLROAD GREENHOUSE SEED CO.,
Grange P. O., Baltimore, Md.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President. D. S. Lake, Shenandoah, Ia., Vice-President. George C. Seager, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer.

AMERICAN PARK AND OUTDOOR ART ASSOCIATION.—The seventh annual meeting of this association occurs at Buffalo, N. Y., on July 7, 8, and 9. A very interesting and comprehensive program has been prepared, and the delegates will be delightfully entertained during their stay in the Bison City. Professor J. F. Cowell, Director of the Buffalo Botanic Garden, will speak on "Some Features of the Buffalo Park System"; Professor Bailey on "The Forward Movement in Outdoor Art." Mrs. Frances Copley Seavey will deliver an address on "The Possibilities of the Home Grounds." The "Landscape Features and Problems at Niagara" will be discussed. Professor Spillman, of Washington, will talk on the "Significance of the School Garden Movement"; and there will be an exhibition by stereopticon of school garden achievements.

The subject of "Outdoor Life in Cities" will be treated by Volney Rogers, of Youngstown, O.

The headquarters of the convention will be at the Lenox Hotel, North street and Delaware avenue, in the coolest and most beautiful residential part of Buffalo. There will also be an exhibit of photographs and plans of landscape work, including the work of the branches of the Women's Auxiliary. Charles Mulford Robinson, of Rochester, N. Y., is secretary of the association.

The convention of the American League for Civic Improvement will open in Chautauqua, three days after the close of the meeting of the foregoing association.

President Hale, American Association of Nurserymen.

Nathan Wesley Hale, president-elect of the American Association of Nurserymen, is still a young man. He was born in Scott County, Va., February 11, 1860, and comes of Revolutionary stock. His father served in the Union Army during the civil war.

Mr. Hale's school education was limited, consisting of eighteen months' training. In 1882-83 he sold goods in his home county, taught school there in 1884, and saved some money which was swallowed up in a patent right. Mr. Hale left Virginia in 1885 and went to Knox County, Tennessee, where he engaged in the selling of nursery stock for Messrs. Bird & Dew, of the Knoxville Nursery. His faithful attention to his duties and his capabilities quickly advanced him, and he was soon offered (and accepted) an interest in the business. He has risen to the presidency and management of the Knoxville Nursery, owning one-half of it. He is also president of the Southern Nursery at Winchester.

Mr. Hale was elected to the lower house in the Tennessee Legislature in 1890, and in 1892 to the Senate. In 1894 many counties in Tennessee instructed their delegates to vote for Mr. Hale for Governor, but he did not attend the convention, and since then has been devoting all his time to business. However, he is a candidate for the Republican nomination for Congress next Fall, and came near being nominated a year and a half ago over the present incumbent in that office.

He represents the company in the wholesale drygoods and notion house of Brown, Payne, Deaver & Co., Knoxville, and has other business interests.

Mr. Hale married the daughter of a prominent lawyer in Kentucky; they have two boys and two girls at their home in the suburbs of Knoxville.

The president-elect is a ready speaker, and his counsel is sought in the deliberations of the national body. He has demonstrated the possibilities before every young man possessed of the necessary grit and energy.

Naming of Azalea Mollis.

Editor Florists' Exchange:

A few weeks ago I observed the mistake Mr. Meehan made in saying that the time would come when the various shades of Azalea mollis would be kept distinct, as is now done with the Ghent azaleas. Named Azalea mollis have been grown by our firm as long as I remember, and the list is increasing every year.

Now that Mr. Koster corrects our esteemed friend Mr. Meehan in the last issue of The Florists' Exchange, the latter kicks again and says that he does not care a cent about the name; it is the color that is wanted; and advises those interested to put the colors on the labels instead of the names, or in addition to the names.

Mr. Meehan cannot be in earnest in

seeking to discard the names and put an indefinite color on the label. I think it is sufficient to name the plants as we do the Ghent azaleas, rhododendrons, roses, apples, pears, and everything else in our trade, and the retailer who knows his business will be thus better able to obtain just what he wants.

For those who are little acquainted with this important class of plants, it will perhaps be worth while to note that we have, since 1888, distributed to the trade our wholesale catalogue in which a list of named Azalea mollis with a short description of the colors is to be found. It may be to their advantage to print a list of the varieties in our last catalogue, of which I send you a copy; and if that is insufficient, I have in my possession a little book, printed in 1896 and distributed by the society, Plantenbeurs in Boskoop, Holland, which gives, in addition to a long list of names, a practical description of Azaleas mollis, pontica, rustica flore-pleno, mollis × chinensis, and rhododendrons, which is at your disposal.

P. OUWERKERK.

Jersey City, N. J.

[We thank Mr. Ouwerkerk for the foregoing information, and would suggest that parties interested apply to him for a copy of his firm's catalogue, which will no doubt be cheerfully sent. Ed.]

Ants on Lawns.

Gardeners are oftened troubled with ants among their plants and on their lawns. When undisturbed, the insects remain in one place on a lawn for years, adding to the height of the mound of earth yearly. A correspondent of the Practical Farmer has this to say:

"To Destroy Ants. Make holes with a crowbar or convenient stick, from six inches to one foot deep and about 15 inches apart, over the ground infested by the ants, and into each pour two or three spoonfuls of bisulphide of carbon, tramping the dirt into the hole as soon as the liquid is poured into it. The bisulphide of carbon at once vaporizes, and, permeating the ground, destroys the ants, but does not injure the grass or any living plant. One should remember while using this substance that it is highly inflammable and should not bring near it a flame, or lighted pipe or cigar."

On the Pacific coast the bisulphide is used for the killing of destructive animals, the homes of which are in the ground.

Syringa Japonica.

Your correspondent from St. Paul refers to the Syringa japonica and its value as a late blooming shrub, flowering with him, as he says, the latter part of June. With us it is in bloom in the early part of June. It is, as he says, highly ornamental, and for the colder States, where hardy shrubs are not numerous, it is much more in demand than it is with us, where so many other shrubs are available.

To those who obtain this shrub, or small tree, without knowing what it is, it is sometimes disappointing, as it is not a true lilac, as lilacs are generally known. It really partakes more of the privet than of the lilac; and the odor of the flowers is that of those of the privet and not of the lilac. Not everyone likes the odor of the privet flowers. Some years ago, when the weeping form of this lilac was sent out there was general complaint when it was found that it was not the old common lilac, as purchasers had been led to expect. The botanical relationship of the privet and the lilac is very close, both being in the same natural order, oleaceæa. The shrub under discussion, Syringa japonica, was formerly classed in a distinct genus, and was known as Ligustrina amurensis. It would be better for the horticulturalist were it still separate from syringa.

The Growth of Japanese Ivy.

The question was asked me recently why it is that when the Japanese ivy is planted to a wall, it usually starts to grow by pushing toward the left. Though having witnessed cases of the kind, it was put down to a seeking of the most light by the vine, but should it not be this, it must be that it is natural for it to twine from left to right, and in pushing to the left it is following natural law. All vines have a law to follow in the way they turn, some turning to the left and some to the right, and it is useless to attempt to change their course if best results are looked for. Set the young shoot in a contrary way to that which it has been taking, and it will try its best to get free from it and back to the original one. It will be interesting to hear of other cases of the course of the Japanese ivy, to see if it is a left to right grower.

Summer Care of Rhododendrons.

As rhododendrons come to us from Europe, they carry a ball of black soil in which they have been grown, and in which the fine roots have ramified in all directions, binding the mass together securely. When planted out here, unless the soil in which they are placed is securely packed around the ball, roots do not take hold of it, in which case the only moisture and nourishment the plants get are what is in the ball spoken of. That this is so is often witnessed in the case of rhododendrons, even those planted for some time. The surrounding soil may be fairly moist, and yet from its not having been of a fine nature and not packed firmly about the ball, the plant would be found dying for lack of water. Soil in which there is some sand is good for placing around newly set rhododendrons. It packs close to the plants, which is what is required, yet often not attained.

Beds should be watched in Summer, and mulched if possible, that the plants get the moisture they need, which is a good deal.

JOSEPH MEEHAN.

CHARLES H. VICK.
Supt. of Floriculture and Horticulture for New York State at World's Fair, St. Louis.

Charles H. Vick.

Charles H. Vick, of James Vick's Sons, Rochester, N. Y., has been appointed Superintendent of Floriculture and Horticulture to represent the State of New York at the St. Louis Exposition, and has established his office at No. 16 Elwood Building, Rochester, N. Y. There is to be an especially fine display of fruits in the State's exhibit, the finest specimens being shown from May until the close of the Exposition. The grounds around the State building are to be laid out in sections and planted with hardy shrubs by leading nurserymen of the State. Special arrangements are to be made also for the accommodation of New York State florists who wish to make a display under the State authority.

Mr. Vick has not yet completed all his arrangements for the floral exhibit, but will have done so in a couple of weeks, when a further announcement will be made in The Florists' Exchange. He will ask the leading florists of the State to co-operate to the extent of making the Empire State grounds surpass all others, and is taking a personal pride in making the arrangements on a broad and liberal plan, so that there shall be nothing at the Exposition to approach his department.

W.

American Seed Trade Association

TWENTY-FIRST ANNUAL MEETING
AT
Atlantic City, N. J., June 23-25, 1903

The twenty-first annual convention of the American Seed Trade Association was held at Atlantic City, N. J., June 23 to 25. The convention was one of the largest as well as the most enthusiastic ever held by the association. Over 150 were in attendance.

Independent of the business, as outlined in the programme given in our last week's issue, not much was done, with the exception of a discussion of the work of the Department of Agriculture. A strong effort is now making by the Wholesale Seedsmen League, in conjunction with the American Seed Trade Association, to bring this matter before the courts; and it is likely that action in this direction will be taken soon.

On the evening of June 24 a dinner was tendered the association by the Philadelphia seedsmen in the St. Charles Hotel, over 200 being present. The occasion was such an enjoyable one, that the small hours of the morning had arrived before the company dispersed.

Regarding the next place of meeting, a strong invitation was tendered by the city of Atlanta, Ga., as well as the president of its Board of Trade, who promised the association a most hearty welcome. St. Louis, however, got the convention.

The officers elected were: President, S. F. Willard, Wethersfield, Conn.; vice-president, J. C. McCullough, Cincinnati, Ohio; secretary-treasurer, E. C. Kendel, Cleveland, Ohio; executive committee, Walter P. Stokes, J. E. Worthing, H. M. Schisler, M. H. Duryea and M. L. Webster.

Among the firms represented at the meeting were: C. L. Allen, of Floral Park; H. C. Anthony, Portsmouth, R. I.; L. H. Archias, Sedalia, Mo.; F. Barteldes & Co., Lawrence, Kan.; A. A. Berry Seed Co., Clarinda, Ia.; F. W. Bolgiano & Co., Washington, D. C.; J. Bolgiano & Sons, Baltimore, Md.; B. L. Bragg Co., Springfield, Mass.; Alfred J. Brown, Grand Rapids, Mich.; W. A. Burpee, Philadelphia, Pa.; J. L. Childs, Floral Park, N. Y.; A. N. Clark, Milford, Conn.; Cleveland Seed Co., Rochester, N. Y.; Comstock Ferre & Co., Wethersfield, Conn.; R. G. Craig & Co., Memphis, Tenn.; F. H. Ebeling, Syracuse, N. Y.; Frank T. Emerson, Waterloo, Neb.; S. W. Flower & Co., Toledo, Ohio; Godden Co., Amzi, Birmingham, Ala.; Griffith & Turner Co., Baltimore, Md.; T. Griswold & Co., Wethersfield, Conn.; W. H. Grenell, Pierrepont Manor, N. Y.; Hart, Welles & Co., Wethersfield, Conn.; Hickox, Mull & Hill Co., Toledo, Ohio; Illinois Seed Co., Chicago, Ill.; Iowa Seed Co., Des Moines, Iowa; S. M. Isbell & Co., Jackson, Mich.; Johnson & Stokes, Philadelphia, Pa.; N. B. Keeney & Son, LeRoy, N. Y.; A. C. Kendel, Cleveland, Ohio; S. F. Leonard, Chicago, Ill.; Livingston Seed Co., Columbus, Ohio; J. M. Lupton, Mattituck, N. Y.; J. M. McCullough's Sons, Cincinnati, Ohio; J. Chas. McCullough, Cincinnati, Ohio; Henry F. Michell, Philadelphia, Pa.; Henry Nungesser & Co., New York; L. L. Olds, Clinton, Wis.; Page Seed Co., Greene, N. Y.; Henry Phillips Seed & Implement Co., Toledo, Ohio; F. S. Platt, New Haven, Conn.; J. B. Rice & Co., Cambridge, N. Y.; J. C. Robinson, Waterloo, Neb.; August Rolker & Sons, New York; Rogers Bros., Chaumont, N. Y.; Schisler-Corneli Seed Co., St. Louis, Mo.; J. Steckler Seed Co., New Orleans, La.; Steele, Briggs Seed Co., Toronto, Ont.; L. Templin & Son, Calla, Ohio; J. C. Vaughan, Chicago, Ill.; Weeber & Don, New York; T. W. Wood & Sons, Richmond, Va.; S. D. Woodruff & Sons, Orange, Conn.; Young & Halstead, Troy, N. Y., and others.

New members elected to the association were, among others: the Cox Seed Co., San Francisco, Cal.; Lilly, Bogardus & Co., Seattle, Wash.; Churchill Seed Co., Toledo, Ohio; W. W. Rawson & Co., Boston, Mass.; Frances Brill, Hempstead, L. I., and the Alexander Seed Co., Atlanta, Ga.

Among the guests, in addition to the members of the association present at the banquet were: Messrs. Charles H. Allen and Arthur H. Goldsmith, Floral Park, N. Y.; Professor Johnson and Mr. Barrett, of the American Agriculturist; Moore & Simon, Philadelphia, Pa.; H. W. Wall, Brooklyn, N. Y.; Charles H. Rowe, Philadelphia, Pa.; Charles W. Whitbeck, Schenectady, N. Y.; John Connon, Hamilton, Ont.; J. Horace McFarland, Harrisburg, Pa.; Frank B. White, Chicago, Ill.; Mr. Stecker, Rochester, N. Y.; Professors Peters and Tracy, of the U. S. Department of Agriculture and Wm. Henry Maule, Philadelphia, Pa.

President-Elect S. F. Willard.

The election of S. F. Willard, Wethersfield, Conn., to the presidency of the American Seed Trade Association, is an honor worthily bestowed. Mr. Willard has been secretary since the Washington convention of the Association in 1897, when he succeeded, in that office, A. L. Don, of New York.

The president-elect was born at Wethersfield, Conn., where he has lived ever since. He has been connected with the corporation of Comstock, Ferre & Co., seed growers, ever since October, 1871, and has been president of that concern since 1898. Mr. Willard has a large acquaintance with the seed trade and the seed growing sections of the United States and Canada.

That he is equally as highly thought of by his neighbors as he is by members of the American Seed Trade Association, in which he has always taken an active interest, was testified to by his election to the Connecticut General Assembly for 1901.

Ullery & Company, of Brattleboro, Vt., have purchased the New England Farmer and Our Grange Homes, of Boston, Mass. The publications will be consolidated and published under the title of the New England Farmer, at Brattleboro.

A bulletin on "The Propagation of the Easter Lily from Seed" has been issued by the Department of Agriculture. The writer of the bulletin is George W. Oliver. We shall refer to it at length in next week's issue.

S. F. WILLARD.
President-elect American Seed Trade Association.

A BUSINESS OFFER!

YOU can earn good high interest on your money by filling empty spaces in your houses now with well-grown palms in medium and large sizes. If you want the best paying crop that you can plant for Summer, plant

THE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The demand has been so great and our advance sales so large that we have not offered it recently, having only just completed filling our advance orders. We have a nice lot of young stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, and there is sure to be a tremendous demand for it another season when it can be offered at lower prices. **Now is the time to invest** in it and get the benefit of the tremendous demand and good prices which are sure to prevail another season.

The **BOSTON FERN**, although it has been cultivated many years, is still scarce. As Nephrolepis Piersoni will sell better and be in greater demand even than the Boston Fern, we predict a scarcity of Nephrolepis Piersoni for several years to come and at big prices. Owing to the great and continued demand, we do not expect to be more than able to meet the demand this spring, so that customers can rest assured that there will be no change in price this season.

We offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants at 60 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

Extra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall trade, and they are also very nice for immediate sales.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

Mention the Florists' Exchange when writing.

Geraniums, Le Soleil, J. Viaud, Castellane and J. Doyle, 2 inch, young stock, 25 of each, $1.60; by mail, $2.00. **Coleus**, Fancy and Giant, $1.00 per 100. **Pansy Seed**, Herr's select, given satisfaction past 23 years, 4000 seeds, $1.00.; 1 oz., $5.00.

Summer Pruning of Trees and Shrubs

Read before the Germantown Horticultural Society, June 3, 1903, by Joseph Meehan.

That the pruning of trees and shrubs in Summer is not practiced nearly to the extent it should be, is partly due to the fact that its benefits have never been made as clear to those interested as could have been done, and because that in the Winter season the gardener has fewer duties demanding his attention. It is the writer's belief that Summer pruning is far preferable to that of Winter, as the objects of pruning are the quicker and better obtained by it. These objects, in a general way, are the forming of beautiful specimens, the producing of flowering shoots and, in the case of fruit trees, the forming of flower buds looking for fruit to follow them.

As an illustration of the way Summer pruning forms beautiful specimens, take, for example, a privet hedge. At this writing, the first days of June, the young shoots of this season are nearly a foot in length. Let alone they will be two to three feet by Fall. But cut them back half their length now and half a dozen shoots replace the one; do it again when these are six inches in length, and again a month or so later, and a bushy mass of shoots will have replaced the original one. It is just the same with trees and shrubs. The many shade trees of our streets and lawns, showing huge scars where large branches have been sawed off, should have been pruned yearly when young and even older, then there would have been no need of cutting off large limbs. The Carolina poplar, a really pretty tree when young, could be kept in good condition a longer time than it is now, had it the care of a Summer pruner. The tree would then be bushy, affording foliage much more dense than as now usually seen. I do not recommend this tree, but use it as an illustration, as ill-formed specimens of it are common in many places.

As shown in the case of the privet hedge, what is required to produce bushiness and shape is the nipping off of the ends of growing shoots. It can be done by the finger and thumb, when growth is soft. Maples and trees, rare and common, should be treated in this way, and not pruned in Winter, when bushiness is the object. Winter pruning acts the other way, mainly. A strong shoot cut back unites its forces to replace what it lost; another one stronger than the other takes its place, with but a few weaker ones in the rear.

Evergreens can be benefited in the way of being made as bushy as deciduous trees are. Pines generally break forth in Spring in clusters of shoots a half dozen or more together. The taking out of the central one will usually suffice, acting as does the pinching off of the end of a shoot on a deciduous tree. The side shoots receive all the support, and thus bushiness is promoted.

Other coniferous evergreens of the same character of growth, such as firs and many spruces, require the same kind of pruning. There is but little advantage in more pruning than the taking off of the central shoot, though the nipping away of the extreme tips of the remaining shoots will cause still further bushiness the next season. Such evergreens as retinosporas and Arbor vitæs and like forms may be treated as recommended for deciduous trees, but their generally numerous branches make the use of a knife or shears a matter of saving of time.

In the case of shrubs, when bushiness is the object, treat them just the same as advised for deciduous trees. Taking a weigelia or golden bell, for example, one would hardly believe the changed appearance of them by Fall when treated to several prunings while they are still growing. No one wants shrubs ball-shaped; pruning is not for that. It is to give bushiness and a pleasing outline while still in reasonable keeping of natural growth.

Pruning for the increasing of flowering shoots consists in the partial cutting away of the shoots that have flowered, that strong, new ones may succeed them, as these new ones are what we look to for our next Spring's flowers. Not all the old shoots must be cut away, as the loss of too many branches is weakening to the bush. As the new ones spring up, there is no harm done in topping them as they grow. It makes the bushy specimens we all like to see.

Fruit trees may be shapened just as other trees are, and besides that it makes them bushy it often promotes fruitfulness. In Europe, where the obtaining of the most fruit possible from every tree is of great importance, Summer pruning is almost universal. The shoots of cherries, pears, peaches and so forth, are pinched back in Summer, while growth is progressing. This causes the formation of fruit buds below where the top has been taken off. In addition to this, a check is placed on the vigor of the trees by removing entirely many of the shoots. To those of us accustomed to letting our fruit trees grow as they will, it is amazing to witness the mass of foliage lying under a fruit tree in England which has just been pruned. In addition to the check thus given, root pruning is largely practiced also, with the idea of forcing fruitfulness by checking growths. There is no doubt the same method would produce fruitful trees here as well, should anyone wish to try it.

Summer pruning of grapes consists of nipping off the shoots producing fruit at two leaves above the bunch. Canes may be allowed to lengthen as they will, Winter pruning bringing them back to the proper length.

Raspberries and blackberries are often cut off when the canes have made two to three feet of growth. The side shoots are formed, making little bushes of each. Though these bush forms are more self-sustaining than others, the fruit is not as large, the greater number of berries produced lessening the size of the whole.

TWO MEN wanted, one to take charge of range of greenhouses, thoroughly experienced in propagation of hybrid perpetual roses from softwood cuttings, must have experience in bedding plants.

Also first-class nurseryman, thoroughly experienced in making soft wood shrub cuttings. Wages paid according to ability. Address E. F., care Florists' Exchange.

BUSINESS OPPORTUNITIES

FOR SALE—A great bargain; 147 acres of good land and a prosperous nursery business. Price $5000. T. K. Godbey, Waldo, Fla.

FOR SALE—Florist place near New York, consisting of 25 lots; 18 greenhouses, 35,000 ft. of glass, good trade. Apply John Thumann, 533 Fulton St., Union Hill, N. J.

FOR RENT or sale, three greenhouses, 24x200 ft., ¾ span; propagating house 100 ft.; potting shed; steam heat; city water; dwelling and stable, at Highland, opposite Poughkeepsie, N. Y. Immediate possession. Joseph Wood, Spring Valley, N. Y.

FOR SALE OR RENT—Park Nursery, Pottsville, Pa., consisting of four acres of land, 11 greenhouses under 14,000 ft. of glass. Population of Pottsville and surrounding towns, all connected by trolley, 50,000. Apply to Jos. DeFrehn, 300 So. 2d St., Pottsville, Pa.

FOR SALE

Old established Greenhouses at Pennsylvania Station, Newark, Delaware. The property is on the main road and contains about five acres of fine rich land, and a good producing orchard. The improvements consist of:

A new eight room dwelling with bathroom, with a fine dry cellar under the whole house.

A large stable with carriage and wagon houses, and sheds for pots, etc.

Three large Greenhouses 70 feet long by 20 feet wide, and one violet house; all heated by steam. A number of hot beds.

Water supply entirely new, consists of a twenty-five hundred gallon tank up on a steel tower thirty five feet high, full well supply and water raised by hot air engine.

The trade is very large, there being no other greenhouses nearer than Wilmington, twelve miles away, and the supply is never equal to the demand.

Low price and good terms to quick purchaser, as the former owner is dead and his widow wishes to retire from business.

Address

Mrs. J. C. SHIVLER;
Newark, Delaware.

Mention the Florists' Exchange when writing

Unless a more decided interest is shown in the Saratoga Floral Association and in the floral fete by the residents and hotel men of the village, it is very probable that no fete will be given in September this year.

The rainfall for the 23 days of this month is 4.57, while that of last June for the full month was 3.84 inches. The precipitation in June, 1887, was 7.70 inches—the record.

Through the courtesy of Park Commissioner Jesse E. Northrup, we have received a copy of the Twentieth Annual Report of the Board of Park Commissioners of Minneapolis, 1902.

A fourth edition of Professor Weed's very useful book on "Spraying Crops" has just been issued by the Orange Judd Company, New York. The contents have been rewritten and the work greatly enlarged. The book is profusely illustrated.

THIS WEEK'S SUPPLEMENT.

A Bed of Evergreens.

A bed of evergreens can be made as attractive as one filled with flowering plants by a careful selection of stock with different colored foliage. Here is one before us which contains but one variety, and that the common Retinospora plumosa; yet the bed, with its setting of ivy, and its general surroundings, is so pretty, that we had it photographed as an illustration of one nicely placed. Were the bed in some positions it would appear very commonplace instead of the pleasing object it is.

The edging surrounding the evergreens is of ivy, a plant admirably suited for the purpose. It is the green-leaved sort. Sometimes the variegated ivy is used. Both kinds do well when near the ground, not getting injured in Winter, as they sometimes do when running up walls and similar places. By close pruning when young, and yearly afterward, the ivy becomes a close hedge; and for the purpose employed here there is nothing better. Where an upright, hedge-like edging is required, the variegated althæa is the thing to use. It is planted a great deal about Philadelphia, where this photograph was taken. It, too, trims well, and many pretty effects have been created in some of the parks by its use.

Beds such as the one pictured are not permanent. In a year or two something else is substituted for the contents to give variety to the plantings.

The large evergreen to the left of the bed will be recognized as a Nordman's fir, Picea Nordmanniana, one of the most useful and beautiful of evergreens. As hardy as it can be, it transplants well; and no matter how inclement the weather in Winter, the Spring finds the tree of the same dark lustrous green it displayed in the Fall. It would be a great blow to gardening were we deprived of the Nordman fir. The one seen in the picture is not as perfect as usual. Generally the lower branches sweep the ground.

Back of the bed will be observed a portion of a fine avenue of pin oak, Quercus palustris. This avenue was planted about 30 years ago, and its beauty at this day is generally appreciated. The trees are touching now; yet for many coming years they will be objects of beauty. Were it not that shade is so much desired, it would be well to take out at this time every other tree; but the authorities probably think 30 years long enough to wait for the perfection attained. Wherever planted, the pin oak pleases. In the first place, it transplants with as little trouble as a maple, no other oak doing as well, save the bicolor. Then there are its pretty green, finely divided leaves, which change to a partly scarlet color in the Fall. As they gain height, the lower branches change direction, becoming drooping, as may be seen in the illustration. And to be added to all is the general character of all oaks, viz., freedom from insect attacks.

Taking into consideration the position of the bed, the background of evergreens and of oaks, the picture is one all can admire for its beauty and its lessons.

JOSEPH MEEHAN.

CHANGES IN BUSINESS.

GREEN BAY, WIS.—Ed J. McCormick has purchased the greenhouse and business operated under the name of G[illegible]fron & De Clerc for the past three years.

CHICAGO.—The Glen View Floral Company has been incorporated, capital $3,000, object, dealing in flowers and farm products, incorporators, Maurice W. Barnham, Hans P. Garhardt, James P. Gascoigne.

OZONE PARK, L. I.—The Ozone Park Nurseries have started in business here as growers and importers of nursery and florists' stock. Particular attention will be given to such goods as hardy roses, of which the concern has now a large supply, and azaleas, rhododendrons, boxwood and bay trees will be specialties. Forty acres of ground have been leased here for the firm's purposes. The concern is composed of Edwin Webber and Charles Ittinger, with C. B. Knickman, as manager. Mr. Ittinger is a practical florist and nurseryman and Mr. Knickman is well known to the trade, having for many years been associated as traveling salesman with some of the leading nursery and florist houses of the United States.

The Nurseryman and His Customers.

J. H. Hale, of Glastonbury, Conn., is a man of ideas, possessed of a great deal of that very necessary element in business known as common sense, and when he talks upon any subject his words are generally vested with a practical ring that renders them worthy of attention and a pleasure to listen to. At the recent meeting of the American Association of Nurserymen held at Detroit, Mr. Hale gave his hearers some sound advice on the relations of the nurseryman and his customers. Among other things he said—and his language changed to suit the altered conditions will apply with equal force to the florist as to the nurseryman.

"To be sure, many nurserymen at the present time do not know as much about varieties, suitable locations, methods of culture, marketing, etc., as they ought. The demand for cheap trees and plants has forced them to hustle in the production of the greatest number of trees and plants at least possible cost, and the average customer is not willing to pay for anything but the bare cost of the trees. And so it is that there are far too many nurserymen who could not tell at sight the fruit of many of the varieties they propagate. The vast majority of nurserymen are honest, careful men, yet being human, they do make mistakes, and when once a mistake is made the continued propagation by taking buds and scions from the nursery row increases the error, and we are sending out mixed varieties, causing no end of trouble, both to the nurserymen and planter.

"It may cost a trifle more to take buds and scions only from fruiting trees of known value, but it insures purity and tends to breed up rather than down. My orchard interests being greater than my nursery interests, I know and feel this from the planter's point of view, and I am sure there is a generation of planters growing up who will gladly pay any extra cost of propagation to the nurseryman who will always propagate from fruiting stock.

"An experimental and test field and orchard is a very expensive adjunct to a nursery, but it is an absolute necessity where one has not other means of keeping fully posted as to varieties. Our agricultural experiment stations are doing considerable of this class of work, yet ought to do ten times as much as most of them are now doing, and do it better too, and if they have not funds enough to fully do the work it is our duty to see that our legislatures make more liberal appropriations, and also our duty to furnish the stations freely with samples of all new plants and trees, a few years before introduction, if possible. This might somewhat hinder the sale of the great Hunkedory pear, Bouncing Bet strawberry, or Aaron's Dewy rose, yet be of real encouragement and value to intending planters and to the business interests of the legitimate nursery trade. I have known in a few instances in the past that plants, buds and scions have passed out of the hands of the experiment station people without proper authority. To my notion the planter or nurseryman who gets his stock that way is not on the road to success, and will never cut much figure in the market. Frequent visits to fruiting fields and orchards of successful cultivators will supplement the information obtained from our own test plots and those of the experiment stations, for the nurseryman should be a walking encyclopedia of horticultural information, always on tap for the benefit of his own customers and those of the other fellow too.

"The more horticultural information we can circulate, the larger and better will be our business. One of the largest items of expense in my office is the correspondence on horticultural topics that do not pertain to the nursery sales, and I count it profitable advertising to furnish information to all who inquire, even to the extent of explaining how to prune, plant and care for a lot of trees bought from another nursery. There is something wrong in a nursery that is always seeking new customers; old customers should be our best ones, and will be if care is taken to always give them the best stock you have, and never sell them a variety you would not plant yourself.

"Nothing pleases a man more than to show his friends his lawn, garden, field or orchard giving satisfactory results of bloom or fruitage, and if by judicious advice in planting you have started him on the road to success, the fruitage of his plants and trees and his constant talk are all in your favor, a standing advertisement, 'fully illustrated, top of column next to reading matter.'"

As regards experiment station work for and on behalf of the florist trade, it is unfortunate that more of it has not been done, and that that accomplished has not been of a more satisfactory character. This condition is in part the result of inadequate facilities for the conduct of the operations, lack of expert workers, and largely owing to what has been called the "tag ends" of stock having been supplied the stations for experimental purposes. The remedy for this latter drawback lies wholly with the plantsmen themselves: that for the securing of a sufficient working plant and necessary appropriations to carry on same may come from concentrated agitation on the part of the trade. The engagement of practical men to conduct the experiments is in the hands of the various stations, and will follow the greater liberality of the different States on behalf of the florists located therein.

In view of the importance and necessity of the experiment station to the industry, all these things seem worth working for.

Plant Diseases in the U. S. in 1902.

The Year-book of the Department of Agriculture for 1902 contains the following information relative to diseases of greenhouse and ornamental plants last year:

"In New England and the Eastern States greenhouse crops, like carnations, lettuce, etc., have during recent years been increasingly injured by stem-rot (Rhizoctonia, etc.) and wilt diseases (Fusarium). These were again prevalent this year, but are now successfully controlled by many growers, who sterilize their soil by steam under high pressure. It is noteworthy that this practice is becoming quite general among greenhouse men and others on account of the great gain resulting. Chrysanthemum rust is reported as bad in Maryland, Ohio, and North Carolina, but was not so abundant in Massachusetts. The aster wilt (Fusarium) was widespread and destructive, not only in the East, but also in Nebraska and North Dakota. The Massachusetts station has published the results of investigations by R. E. Smith on this disease and on the troublesome yellows disease of the aster. Hollyhock rust was bad in New York. Rose mildew (Sphœrotheca) has been troublesome in Mississippi, Georgia, North Carolina, and other Southern States. Other complaints received were of phlox and rose mildew from Kentucky, carnation rust and verbena mildew from North Carolina, black spot of rose from Nebraska and Idaho, and violet leaf-spot from Connecticut. A serious injury to roses at Woods Hole, Mass., resulted from the fumes of burning tarred roofing. The foliage was shriveled or fell off and the plants were otherwise injured. The Massachusetts courts allowed $20,000 damages to the owners."

Farmers Becoming Violet Growers.

In one of its recent issues, the New York Herald published a story to the effect that "farmers near Red Hook, N. Y., are neglecting their farm crops to grow violets." A correspondent of the Rural New Yorker, who is evidently anxious to join the throng, inquires of that periodical as to the truth of the statement. The question is answered by another contributor to the Rural as follows:

"It is to a great extent as the New York Herald states, this being the case at Rhinebeck and vicinity. As I understand it, there are something like 100 violet houses at present, and 50 new houses are building this Spring. As to the farmers neglecting their crops and going into violet culture, I do not believe that to be so, although quite a number of them are erecting houses. But I will tell you what they are doing; and that is, supplying the Rhinebeck violet growers with soil for their houses and they get a large price for their soil. It seems that the Rhinebeck soil is well adapted for that purpose, more so than the soil up here—about seven miles from Rhinebeck."

In our opinion, that farmer is the most sensible man who sticks to supplying soil at a "large price."

A discouraged editor, in a fit of desperation, dashed off the following:

The wind bloweth, the water floweth, the farmer soweth, the subscriber oweth, and the Lord knoweth that we are in need of our dues. So come a-runnin', ere we go gunnin'! This thing of dunnin' gives us the blues.—Ex.

The Passing of an Old Landmark.

The old-established florist and nursery plant conducted by Gabriel Marc & Co., at Woodside, L. I., has been discontinued. Charles J. Marc, the owner, has sold the property, the greenhouses are being dismantled and removed, part to the place of John Snyder, lately foreman here, and now in business for himself at Twelfth avenue, Astoria, and part to other local craftsmen. Mr. Marc will locate for a short time at Laurel, Md., finally making Washington, D. C., his home.

The founder of the business, Gabriel Marc, a Frenchman, was one of the pioneer American florists and nurserymen. He began operations in the early forties, at the old village of Bloomingdale, N. Y., having as his confreres Mantell, Boll, Bridgeman, Hogg, Donati, and others of the men who laid the foundation of New York's floral industry. Later on he removed to Astoria, subsequently settling at Woodside, L. I., when the country round was a forest tract, from which latter fact the then hamlet was named. In one year some $3,000 worth of timber was cut on the Marc estate, and sold for shipbuilding purposes to contractors at Greenpoint, L. I. The ground was finally got in shape for florist and nursery uses, and a one time large business was carried on.

Gabriel Marc imported extensively such stocks as tree roses, camellias, etc. Every year he made a visit to European nurseries, and when his importations arrived in the United States he traveled in the eastern and southern States from Portland, Me., to New Orleans, introducing his specialties into commerce. In those days horticultural advertising was unknown, and personal solicitation by sample the only means of trading. Many of the now well-known southern camellia trees were planted under Mr. Marc's direction. When that old-time favorite was at the height of its popularity, sometimes a dollar a bloom was received for the flowers at Christmas. A sale of 300 camellia blossoms for $300.00 to the late W. C. Wilson for a Christmas order in New York was one of the largest on record. Even the fallen petals were precious, being collected under the bushes, wrapped in cotton batting, and afterward wired by Wilson for use in his made-up work.

The large camellia trees at Woodside, relics of former trade and treasure, have all been disposed of by Charles J. Marc to local purchasers.

The elder Marc also imported verbenas largely, and sales of a dollar a plant of these are among the pleasant memories of his son.

Charles J. Marc has been engaged in the florist business over forty years, and having disposed of the Woodside property advantageously, he retires to enjoy a well-earned rest.

E. G. Hill Sees Oregon Roses.

"Portland is the only place I have struck since leaving home that I would like to remain in." This was the remark of E. G. Hill, of Richmond, Ind., a horticulturist well known to most rose growers of this city, who arrived here a few days ago on a tour of the Coast. He had heard of the beauty of Portland roses, and the first thing he did after getting here was to look about town and visit some of the principal rose growers. He was fortunate in arriving just after the rain and so found the roses in good condition. He was taken out by James Forbes to visit Riverview Cemetery and the places of Charles E. Ladd and W. S. Sibson, and so had an opportunity to see the best roses to be found in Oregon. He was delighted and said he had never seen such beautiful roses before, though he had traveled through England and France when the roses were at their best and had come through Southern California on his way here. Of Mr. Sibson's flowers he said: "I have never seen such a hedge of La France roses, even in France, and as for the Caroline Testouts, the man who originated that variety never had any such on his place." The foliage on the trees and shrubs in the cemetery and the vivid green of the grass Mr. Hill considered perfectly wonderful.—Portland Oregonian.

Obituary

George Thompson.

On June 16, George Thompson, of Louisville, Kentucky, died of the infirmities of old age. Mr. Thompson was in his 74th year. He was born in England and learned his trade there, coming to Louisville 55 years ago to take charge of the Richardson place. Thirty years ago he started in business for himself and, later, he took his sons into partnership with him, the business being conducted under the firm name of George Thompson & Sons. About 12 years ago the deceased retired from business. He leaves the following children: George Thompson, who operates the business under the old firm name, John Thompson, who is superintendent of parks at Watertown, N. Y.; S. J. Thompson, of the firm C. B. Thompson florists of Louisville, and a daughter, the wife of Charles Schleeter, also a local florist.

Mr. Thompson was always popular with the members of the craft, and his funeral was largely attended by his brother florists. A. R. B.

A. C. Williams.

Alva C. Williams, who for the past four years had conducted a seed and fertilizer business in Louisville, Ky., died there on June 17. He was born near O'Bannon and was 51 years of age.

New Inventions.

AN ADJUSTABLE PLANT SUPPORT AND POT HOLDER.—H. C. Chessman, of the firm of Chessman & Schepman, Richmond, Ind., has invented, and made application for a patent for an adjustable plant support and pot holder. A local paper thus describes the contrivance:

"The plant support consists of a double corrugated wire standard, with sufficient anchorage to hold the support in a firm and upright position when placed in the bench. On this upright are placed at intervals a corrugated ring so constructed that it can be adjusted to any desired height, and when so placed is firmly held at right angles with the standard. The corrugated ring is cut opposite the standard and provided with hooks and loops so that the ring can be adjusted to any desired size, thus accommodating itself to the plants when small, and as they grow larger the ring can be made larger to correspond. The hooks or loops are so constructed that when properly placed and locked they cannot come apart until released and unlocked, which can be done in an instant.

"The above described invention is really two patents in one, as the corrugated rings are also used as pot holders, and can be adjusted to any desired size of pot, thus converting any pot plant into a hanging basket plant. A hanger is provided that hooks into the ring, and when properly placed the more weight there is on the hanger the tighter the ring becomes locked and impossible of becoming displaced until removed from the pot and unlocked, which can be done in an instant. The expense of the pot hanger is trifling compared with the results obtained."

FIRMS WHO ARE BUILDING.

McPHERSON, KAN.—Chas. Simonson will build an addition to his greenhouse.

WHITESTONE, N. Y.—G. Gebhart's Sons will build four greenhouses 27½x111 feet.

GYNEDD, PA.—Thomas Foulds is making some needed improvements at his greenhouse establishment. All the houses will be reerected and one house widened to 27 feet.

IRONWOOD, MICH.—Maurice Geary is building a greenhouse and salesroom west of his store. Mr. Geary contemplates adding to the present facilities as fast as the demand warrants it.

WHITE MARSH, MD.—R. Vincent Jr. & Sons are covering with glass a ground surface of an acre, in which space they will grow vegetable plants. No benches will be used and the ground will be cultivated with the plough.

PATCHOGUE, N. Y.—Frank Nequet is building two large greenhouses on his Medford avenue property. They are 36x160 feet. Mr. Nequet will remain here and give his attention to the growing of carnations for the New York market.

The Government Sued.

Preliminary steps are being taken for the hearing by the Court of Claims of the suit brought against the Government by the legal representatives of Arthur C. Nellis, of New York, for the payment of $18,000 claimed to be due him for furnishing seeds to the Department of Agriculture during a recent fiscal year. Nellis, who is said to be the manager of the New York Market Gardeners' Association, with headquarters at 39 and 41 Cortlandt street, New York City, was the contractor for furnishing the seeds for which Congress appropriated $108,874 but the sum of $14,000 was withheld by the department because of the alleged failure of the contractor to carry out the terms of his contract to the satisfaction of the officials.—N. Y. Times.

One of the interesting exhibits that may be seen in the Horticultural Department at the Louisiana Purchase Exposition at St. Louis, next year, will be the fruits fresh from South Africa. The managers of fruit farms of the late Cecil Rhodes at Cape Town have announced their intention of placing fresh fruits on exhibit each week. Even in London this feat has never been undertaken.

Advertiser's Correction.

Lakeview Rose Gardens, Jamestown, N. Y., says the two-inch and three-inch Bride Rose plants, quoted in last week's advertisement, should have been American Beauty. Corrected advertisement appears in this issue.

The Parks of Milwaukee.

The inauguration of the park system of Milwaukee is of comparatively recent date, dating from 1889. In that year, through the instrumentality of a number of citizens, a law was passed to establish the system. It allowed the five commissioners to be appointed by the Mayor and to serve without compensation, one hundred thousand dollars in bonds for the purchase of sites. The law was found inadequate in many respects, and new legislation was obtained in 1891, followed by other enactments covering the financial and tax questions.

Lake Park comprises 130 acres and occupies a promontory on the lake shore, some 100 feet above the water; it commands a fine view of the bay. River Park contains 24 acres. It is located on the Milwaukee river and is a popular resort. Several mineral springs add to the attraction of this park.

West Park is situated at the extreme western end of the city between Vliet and Pabst avenues and Fortieth and Forty-seventh streets. It contains 124½ acres. The special features of this park are its magnificent driveways, its lake and wooded island, its aquatic gardens, its deer park, athletic grounds, picnic grounds and immense groves. The aquatic garden is one of the finest of its kind in the country. Four ponds, at varying elevations, afford fine opportunity for the landscape gardener to plant shrubbery and perennials so as to produce the most pleasing effect. Many works of his art now grace the borders of these ponds.

Mitchell Park is at the foot of Twenty-first avenue, overlooking the Menomonee Valley. It is considered one of the gems among Milwaukee's many beauty spots. Its giant trees, fountain, artificial lake, fine pavilion and immense conservatory are its attractions.

South Park is at the extreme southern end of the city, between Logan and Howell avenues. It is a favorite retreat for family picnics, and has a spacious dancing pavilion, also a magnificent lily pond.

Lincoln Avenue Park, on the south side, is another favorite resort. It has a fine pavilion, beautiful fountain, an artificial lake and splendid trees.

North Park, formerly known as Perrigo Park, is located at Burleigh and Forty-third streets.

Milwaukee has always been noted for its magnificent streets and the fine roads running out into the surrounding country. Nature, with the assistance of art, has provided most charming thoroughfares. Among such for pleasure driving are Grand avenue, Prospect avenue, Juneau place, Newberry Boulevard, Highland Boulevard and the parks.

GRAND AVENUE BOULEVARD, MILWAUKEE.

Plant Notes from Riverton, N. J.

The genus Hemerocallis, with one exception, viz., H. aurantiaca major, may be classed among the hardiest, best and most satisfactory perennials grown. They are easy to cultivate, their requirements being simple; but they pay for a little care though. They vary in both habit and flower from the narrow grass-like foliage of H. graminea or minor to the wide bold foliage of the fulva section, the flowers varying in color from the tawny brown of fulva through various shades of yellow to the rich orange of aurantiaca major. There are both double and single forms of the flowers, but the single ones are the more graceful. Nearly all are fragrant, and although as a cut flower they seem short-lived, the unopened buds expand and open in water.

Of late years numerous new varieties from various sources have been placed on the market, but whether there is room for any increased number of varieties in this section seems to be a disputed point. The hybrids that have so far been tried at Riverton vary only in minor differences, and unless their season can be decidedly lengthened I don't see room for a multiplicity of varieties. The ground is now pretty well covered.

H. Dumortieri was the first to bloom here, opening its flowers the first week in May. This is a very desirable variety; when well established it is exceedingly attractive with its numerous orange yellow flowers so profusely produced; Middendorfiana, a quite distinct variety, flowers a week later.

H. flava comes some two weeks later. Fulva is now in its prime. Kwanso and Kwanso flore-pleno blooms in July and August. When these are nearly past, then Thunbergi takes up the tale. But flowering in all cases can be materially retarded by simply lifting and keeping the plants in a dormant condition in the early Spring months.

The new varieties tried are aurantiaca. This is an exceptionally good and distinct sort, quite hardy and a good robust grower. In general appearance it seems almost intermediate between fulva and flava, but much more attractive in the color of the flower, which contains but a small shade of the coppery brown of H. fulva.

H. aurantiaca major is perhaps too well known to need any description. It is the best one by far to date, and is worthy of any care bestowed upon it. I think the best method of caring for it is to lift it in the Fall and store it away in a cool cellar from which frost is almost excluded. It will stand several degrees of frost if it is kept in a rather dryish soil or sand, but the least exposure to air or water in this condition has proved fatal to it with me. I have also wintered it in a cold frame heavily protected with straw and a sash over the straw.

H. luteola, sent out by an English firm, is an hybrid between H. Thunbergi and H. aurantiaca major, and is said to be intermediate between the two. This has proved hardy, and where variety is required is a useful addition. It is quite free flowering and a good strong grower; the flowers are of a clear orange yellow. The same cross was made by V. Lemoine, of France, and sent out under the English name. A similar cross was made by A. Herrington, of Madison, N. J., and is now being disseminated under the name of H. Florham. All three of these hybrids are nearly identical.

H. Gold Dust is another hybrid very similar in height and size to H. flava, with, perhaps, a more decided shade of orange in the color of the flower.

H. Orangeman is perhaps a little stronger grower, with flowers of clear bright orange. These two are so near alike that I really see no room for them.

H. Sovereign is a very pretty rich orange yellow, but all of the last four named might readily be thrown together and given one common name.

H. Dr. Regel, the most recent introduction, as seen here this Spring, seems nothing more or less than a good form of H. Middendorfiana.

There are several other new varieties such as H. Flamid, which is said to be nearly a month earlier to flower than any other variety, H. apricot and H. flava major, and others.

Incarvillea Delavayi, introduced from China in 1893, is still winning its way into popular favor. And so it ought. It has stood outside here now for two Winters without any protection, and has thus proved itself entirely hardy. It is one of the most attractive plants in any garden during the early weeks of June, with its large pinnate leaves nearly 18 inches long, and its beautiful large rose red gloxinia-like flowers 2 to 3 inches long, numerously produced on each scape. The plant may be raised from seed, which should be sown in the open ground in a light porous soil in early Spring and allowed to remain in the seed rows till Fall, or the following Spring, when they should be transplanted into a good, light rich soil. A few might flower the second year, but bloom in any quantity can scarcely be looked for till the third year..

HERBERT GREENSMITH.

QUESTION BOX

Ventilating.

(130) I have a house 100 feet long, running east and west, and I was obliged to make the south wall 8½ feet high in order to keep the boiler out of water. I find that the bench on the south side is shaded all Winter, so I wish to put glass in the side wall. Would it be best to put in ventilators, and how should it be done? There is a double gutter on the south wall.

J. F.

—The wooden wall can be removed below the plate and a false sill inserted at the height of the bed or bench. Whether a ventilator should be inserted will depend upon the width of the house, the kind of crops to be grown, and the amount of ventilation now provided. For Summer use ventilators will probably be desirable. They may be continuous or a portion of the wall may be filled in with sash bars. If sash bars are used for a part or the whole of the space, they can be put in the same as for the end of the house.

Heating.

(131) How should pipe be graded for steam? How to enter the boiler with the return pipe? Has the water line in the boiler got to be below the level of the return pipes in the houses? How is a pump used to pump the condensation into the boiler? E. S.

—The coils should always have a slight fall, say, one inch in ten feet, although less would answer. The larger mains may rise, but it is generally best to give a fall to the smaller ones. The return should enter the boiler at or near the bottom. If a gravity system is used, the water level in the boiler should be three or four feet below the bottom of the coils. If a pump steam trap is used this will not be necessary. If a steam pump is used the return water runs by gravity into a tank located below the level of the coils. From the tank a return pipe runs to the boiler and the pump is located upon this. The pump is worked by steam from the boiler.

We are thinking of changing our heating apparatus from hot water to steam. Please state what size tubular steam boiler should be used to heat 12,000 feet of glass at 55 or 60 degrees. The boiler will be set below the houses. How big and high should the chimney be? There are no overhead obstructions to draft. We have plenty of 2-inch and 3-inch pipe on hand. Would it be better to buy smaller pipe, and, if so, of what size?

OLD SUBSCRIBER.

—It will be best to use a 30-horse-power boiler with fifteen square feet of grate. The chimney should be about 18 inches in diameter and 40 feet high. I would not use any pipe larger than 2-inch for the coils. L. R. TAFT.

We have a lot of 3-inch boiler tubes, which we have been using for a hot-water flow in our old house; but we are rebuilding and adding larger houses, and contemplate putting in steam. We wish to make solid beds, and desire to know, if we cut the flows into 15-inch pieces, would they work as well for drainage as tile, or would the rust from them affect the roots of the plants? also, how close should they be placed on the floor, or how many lines to a 4-foot bed?

J. L. O'Q. & CO.

—I would not expect any injurious effect from the pipes so far as the action of the rust upon the roots is concerned, but I do not think they would be nearly as effectual as tile in draining the beds. Unless the openings between the tiles are quite wide, they would soon fill with rust. They might answer if left three or four inches apart and the openings filled with broken brick, potsherds, and similar material. I would have the top of the pipes about six inches below the surface of the soil, and two lines would be better than one in a 4-foot bed. If the bottom of the bed could be filled with small stones, brick-bats, etc., to the depth of six inches or more, it would be better than the pipe.

L. R. TAFT.

BRIEFS FOR BUSY FLORISTS.

PRIMULAS.—As soon as the seedlings are large enough to handle, they should either be transplanted into seed pans, or small-sized pots. The former method is to be preferred. The plants will make a better growth there during the next few weeks than if put into single pots. If later sowings of seed have not been made, there is still time to do so. It is always well to have a succession of these flowering plants during the Winter season.

PANSIES.—For indoor flowering next Winter, sow seed outdoors early in July. The seed bed may be made in a shady portion of the garden, and to have robust plants for Fall, the seedlings need to be transplanted when large enough, and all buds picked off as fast as they appear.

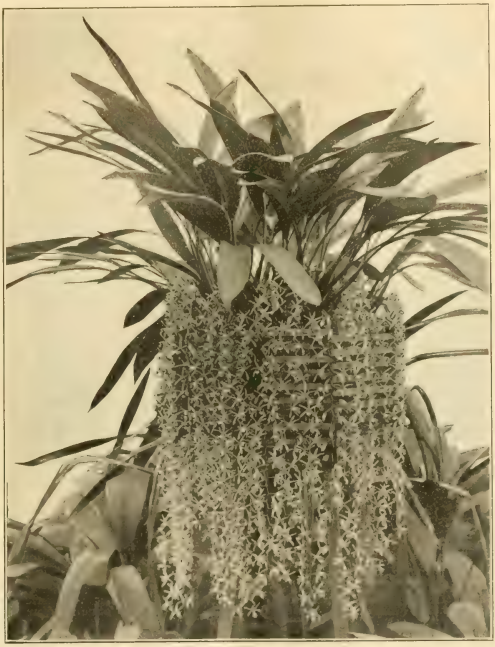
SMILAX.—If beds are to be renewed, the sooner such work is done the better. Remove all the old and put in fresh soil. For planting, use good stock from 2½ or 3-inch pots, and be careful that the watering is not overdone for the first five or six weeks. It is always better to get the strings in place as soon after planting as possible as then there is no growth in the way, and the work can be done expeditiously.

REX BEGONIAS.—The propagating bench is not so crowded now, and it is seasonable to increase the stocks of such varieties of these decorative begonias as is needed. Take the strong healthy leaves and cut them into small sections, and put them in the sand where each piece will form roots, and eventually make a plant. If kept too wet, they will easily damp off however, so some care in avoiding that condition is necessary.

ADIANTUM FARLEYENSE.—When starting the small divisions that have been obtained by cutting up the old plants, whether they have been potted up singly or are in flats, keep them in a close frame on the bottom until new fronds appear. After that, place them on the bench and keep a sharp lookout for snails.

ADIANTUM CUNEATUM.—Beds of this fern, intended to be run for another season, should be partially dried down, and have a rest for a few weeks. When the plants are near the dormant stage, they can be lifted and divided if necessary, and fresh soil can be added to the bench at that time. Clean away all the old stems, if any, and after the new soil is added give a light dusting of lime between the plants. When the new fronds begin to push commence to give water, sparingly at first, as the bench must be kept on the dry side continually until the roots have got well started.

GLOXINIAS.—As these plants begin to send up their flowers, it will be necessary to keep the atmosphere drier and the sprinkling of paths should be discontinued. A light shading should be applied to the glass, if not already done, and when watering care should be exercised that the flowers and the foliage are kept dry.



CŒLOGYNE DAYANA, WITH 1,247 FLOWERS.
Grower, A. Welsing, Brooklyn, N. Y.

Coelogyne Dayana.

Editor Florists' Exchange:

The photograph from which the illustration herewith was made, is of a single specimen plant flowering lately in the collection of Mrs. C. F. Erhart, [illegible] Washington avenue, Brooklyn, N. Y. The plant carried 27 spikes, with 43 to 51 flowers to a spike making a total of 1,247 flowers, and is a great credit to the enthusiastic and zealous gardener, A. Welsing, under whose care the specimen has been for the past eleven years. Such fine specimen orchids are seldom seen, especially taking into consideration that when this plant was bought about [illegible] years ago at an auction it had then but two small bulbs and one lead.

It is grown in an [illegible] basket [illegible] feet across, potted in fibrous peat and moss with additional pieces of charcoal and broken crocks. The plant is suspended on a high stand close to the glass, where it enjoys a quantity of moisture and heat. It is a native of Borneo and one of the prettiest of the Cœlogyne tribe. A. J. MANDA.

The Croton as a Bedding Plant.

Editor Florists' Exchange:

When grown well the croton can hardly be surpassed as a bedding plant, and one has only to see the magnificent beds in the grounds of the Royal Palm Nurseries here, in order to have an idea of how the plant thrives in its native habitat. In the croton beds of this establishment are to be found upward of [illegible] varieties (both old and new) affording a gorgeous spectacle and a great range of color.

The plants are kept in the greenhouse until the first of May, the mean temperature at that date being more uniform and suiting the requirements of the plants. The overlooking of this fact is undoubtedly the great mistake made by a great many in the North. They rush out their plants, exposing them to the warm days and cool nights and then wonder why the crotons fail to come up to their expectations.

The light sandy soil here seems to suit the crotons remarkably well but the warm showers and bright sunshine are the important factors in bringing out the magnificent colors.

Thousands of young plants are grown annually at this establishment, and, considering the cheap rate at which they are sold, a bed of crotons would be a very inexpensive luxury, but a very attractive one.

FRANK MACLAREN.

Oneco, Fla.

Rose Gruss an Teplitz.

Editor Florists' Exchange:

This is a magnificent rose for outdoor culture; bearing bright cinnabar red flowers. It is a hybrid tea and is perfectly hardy. Last year I only covered the ground with a little salt hay after the ground was frozen.

The Gruss an Teplitz shows strongly the habit of the Bengal hybrid roses. The flower is large, having a delicious odor. Some of the blooms come single, but the majority are semi-double, the petals being turned back in a graceful way. The whole flower is of loose construction. The early ones, which come so freely, are all on the old wood and show their beauty under the beautiful young growth which is from two to four feet in length, with broad, dark metallic green leaves, which, as they near the end turn to reddish bronze.

The young growth shows flower buds already, so this rose will give a supply of bloom until the last of October, and in very mild weather until the latter part of November. There are a great many red roses, but outdoors the majority of them get the "blues" under the strong rays of the sun. Gruss an Teplitz is a real "Sunny Jim." All it needs is a well prepared soil and, later on, some bone meal. The variety is perfectly free from rust and mildew, and does not require to be cut back but simply to be kept clean from dead wood. A large bed of this rose never fails to attract attention.

J. G. VAN GELDER, JR.

New York.

A Grass for Shaded Situations.

Festuca rubra, the red fescue, is recommended in Bulletin 22 of the New England Association of Park Superintendents as a very good grass for shaded positions, doing well in dry, sandy, and sterile land. Of course, it will suffer and disappear if trampled over continually by great masses of people.

The Government astrologist recommends the variously leaved fescue (Festuca heterophylla) for use in densely shaded situations. Often, too, Kentucky blue grass can be used to good advantage if care is taken to keep the land from becoming sour and sodden. This can be done by using care in watering and by occasional applications of lime with surface cultivation of the soil by means of an iron-toothed rake or similar instrument.

New York.

The Week's News.

The outing of the New York Florists' Club, which occurs on Wednesday, July 1, is to be the biggest affair the club has ever had in the way of a picnic. Enough tickets have been sold already to insure a large attendance.

The weather here, for the last week or two, has been decidedly unfavorable either for picnics or business, but present indications point to pleasant weather with sunshine within the next day or so, and we can reasonably expect a fine day for the club's outing.

The transportation committee is arranging with the West Shore Railroad for the conveyance of the delegates to the S. A. F. O. H. convention at Milwaukee in August. It is about decided that the delegates will leave New York at 1 p.m. on Sunday, August 16, and try to have the Boston contingent leave Boston at the same time, and join the New Yorkers at Rotterdam Junction. If this can be arranged, it will no doubt provide a party large enough to have a special train right through to Milwaukee. Circulars will be sent out by the railroad company, giving all particulars as to berths, etc., and the club's committee will be aided greatly in their efforts if all who will attend the convention from this locality will notify Walter F. Sheridan, 39 West 28th street, and declare how many berths will be required.

The Greenwood Florists' Employees' Association held its annual outing at Ulmer Park on Friday, June 19. The event took the form of a promenade, with dancing at intervals. Over five hundred persons were in attendance, and all had a very enjoyable time. The officers of the association are: President, James P. Carlisle; vice-president, John Kiernan; second vice-president, John Behan; recording secretary, Thomas Ryan; financial secretary, Joseph Driscoll; corresponding secretary, Edward Carney; treasurer, William Walker.

Israel H. Eisenberg, florist, 440 Albert street, Long Island City, invites members of the craft to his establishment on the morning of July 4 at 8 o'clock to have a general good time. The prime feature of the entertainment will be the presentation, by Mr. Eisenberg, of a gold watch to his foreman, Victor Olm, for faithful services rendered.

William T. McCarthy, principal of Public School No. 63, this city, has forbidden the carrying of flowers at the commencement exercises at that institution, and orders for 106 baskets of flowers were consequently countermanded, says the New York Times.

John N. May will leave this week for a fishing excursion in the mountains. Mr. May has not taken a vacation for several years, and is looking forward to having a good time of rest and enjoyment.

J. H. Troy, manager of the Rosary Flower Company, sails for Europe today (Saturday) on a business trip. He will visit Dickson & Sons, of Belfast, Ireland, and other prominent nurseries while abroad. Mr. Troy informs us that he has now got a stock of several thousand of the rose Killarney, most of which has been obtained from Dickson & Sons, the originators of the rose. This variety has been sold in New York as No. 19, and as Mrs. Westinghouse, but is now going under the name given it by the originators—Killarney.

Richard Vincent, Jr., and Mrs. Vincent, of White Marsh, Md., sailed on the Cunard steamer Aurania for Liverpool on Tuesday, June 23. While abroad, Mr. and Mrs. Vincent will visit the Channel Islands to get a glimpse of the immense vegetable industry carried on there.

George Young, the noted grower of American Beauty roses, Clifton, N. J., will tear down two of his greenhouses and erect one large modern greenhouse in their place.

The lease of Mrs. Scallen's retail store, 1259 Broadway, expires on August 1, and the business will probably be removed to the new block that is building directly opposite the present location.

The auction season is not closing this week, as we mentioned in our last issue. W. J. Elliott, of William Elliott & Sons, informs us that there will be two more sales.

J. H. Cox, late with George A. Weaver & Co., Newport, R. I., has accepted a position as traveling salesman with the Stumpp & Walter Co. Mr. Faxen succeeds Mr. Cox at Newport.

E. B. Holtslander, Liberty, N. Y., was a visitor.

Philadelphia.

Pennsylvania Horticultural Society.

The meeting held on Tuesday last was a very successful one. It was a sweet pea meeting. There were staged 210 vases of sweet peas, separate varieties, 25 and 50 sprays to a vase; also seven large vases of assorted colors. Prizes were awarded as follows: John McCleary, gardener to Mr. William Weightman, took the Henry A. Dreer prize for their incomparable collection of 21 varieties. William Robertson, gardener to Mr. John W. Pepper, and Otto Triebwasser, gardener to Mr. John B. Stetson, were first and second for the Henry F. Michell prizes for collection of 12 varieties, and for the one vase of mixed offered by the same firm. Ernest Schrieber, gardener to Mr. W. L. Elkins, was first, and James Coleman, gardener to Mr. Walter Lippincott, was second for the prizes offered by H. Waterer for a collection of 20 varieties. William Robertson was first, Ernest Schrieber second and Daniel Neely, gardener to Mr. C. Hartman Kuhn, third.

Henry A. Dreer offered prizes for Iris Kæmpferi, best collection. These went to William Kleinheinz, gardener to Mr. P. A. B. Widener and John McCleary. The prizes for lettuce, Dreer's All Heart, offered by that firm, were awarded to Robert G. Morrow, gardener to Mr. George S. Bodine, and John McCleary. The prize offered by Mr. Samuel T. Bodine for specimen croton was awarded to Ernest Schrieber. His specimen was a grand plant of Sunshine, well finished and colored. A plant of Croton Andreanum exhibited by John Hobson, gardener to Mr. Edw. A. Schmidt, was second.

For such a peculiar season the exhibition was considered a good one, as in some sections sweet peas are not even in bloom yet. For earliness William Robertson is still away in the lead with sweet peas, as he has been cutting since June 2.

Items.

All the books on horticultural subjects belonging to the late Charles H. Miller, the well-known landscape expert, have been given to the Pennsylvania Horticultural Society by his daughter, Miss Emile J. Miller, in accordance with her father's request.

The season at Waretown will begin on Friday, June 26, when John Westcott will have his usual house party for the grand opening at the club house on the beach of Barnegat Bay. The party will go down on Friday morning and most of them will remain until Monday.

H. Waterer is home again from his business trip to England. He has had a very successful, as well as a pleasant tour.

There are several crack bowlers among the employees of Pennock Bros. They are ready to meet a team from any other retail establishment in the country. For dates write William Gibson.

The bowling tournament for places on the Milwaukee team is full of surprises. There will be several new men on the team, and from the present outlook there will be a hard finish for sixth and seventh places.

DAVID RUST.

Chicago.

The Week's News.

Demands have been made upon the North and West Park boards by the Gardeners' and Florists' Union for an increase in pay for the employees of these parks. A uniform wage scale of $75 per month is asked, the same as is paid the South Park employees. The assistance of the Chicago Federation of Labor has been asked to help secure the increase without a strike.

The attendance at the regular meeting of the Florists' Club, June 17, was not very large. Only routine business was transacted. P. J. Hauswirth presided.

On June 18 fire started in the stable of Mrs. Schiller, but was extinguished without any great damage being done.

J. B. Deamud is receiving some fine varieties of peonies. Noteworthy among them is one, a dark red, which is very full and double and will, no doubt, be a good seller when better known.

Anton Then has been at St. Louis the past week attending the convention of the United German Mænnerchor, of which he is a member.

N. Wietor and J. Muno have gone on a week's fishing trip to Woodruff, Wis.

The firm of Adkins, Young & Allen Company have been inconvenienced somewhat this week, as the result of a fire in the building in which they are located. The suffered no loss, but their place was pretty well watersoaked. This firm deals in pumps, pipe and fittings.

Business is not very brisk with the seed stores at present, yet some belated customers are to be seen.

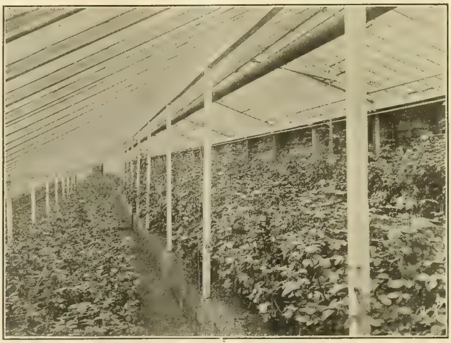
C. Cropp, of Vaughan's seed store, expects to be able to sail for Europe the first of July.

Bassett & Washburn are sending in from their greenhouses to their store some extra fine Liberty and Kaiserin Augusta Victoria roses.

The George Wittbold Company is sending to the market a great variety of hardy herbaceous flowers from their nursery at Edgebrook.

Visitors included Herbert Heller, New Castle, Ind.; Mr. Wiegand, Indianapolis, Ind.; James H. Stevens, Birmingham, Ala.; C. C. Pollworth, Milwaukee, Wis., and Mr. Plummer, Kewanee.

ROBERT JOHNSTONE.



HOUSE OF ROSE LIBERTY

At Establishment of J. L. Dillon, Bloomsburg, Pa.

St. Louis.

News Notes.

Several of our growers are having some trouble with their chrysanthemum plants, a great many of which are making their crown buds. They lay it to the very cool weather we are having.

Anton Then, a florist from Chicago, was a visitor the past week. He attended the Sangerfest and called on the trade, who were glad to see him.

Henry Emmons and E. W. Guy, of Belleville, were also visitors. They say there was no damage from the flood in their city.

Wm. Winter, of Kirkwood, and F. B. Call, of Clayton, were likewise among our callers last week. Mr. Winter says a big reception awaits the florists when they visit Kirkwood on July 9.

I hear that two of the four florists mentioned in my notes in last week's issue take exception to the remarks made. The note made no allusion to crape pulling, it being only intended to convey that those mentioned are always busy with funeral work, and that they are out often and early at the wholesale houses after flowers. They say they thought "St. Patrick was a gentleman." So he is.

ST. PATRICK.

Decumaria Barbara.

A beautiful Southern vine, with large lustrous green leaves, is the Decumaria barbara. It is rarely seen in gardens in the North, because it is thought not hardy. But a vine on my house has stood for many years uninjured. The leaves are large and shining green, and in Midsummer the plant produces freely cymes of white, fragrant flowers.

In its native woods, in North Carolina and south, it ascends trees in damp woods; and, when in flower, with the blossoms backed by the bright green foliage, it is greatly admired.

In the case of my own plant, it has not been a success as a climber on my house. It makes rather heavy wooded shoots, and, in addition, its foliage is heavy; and between these two things and the fact that its rootlets do not cling over-tightly to the wall, it is apt to lose its hold in gales of wind and rain. It would doubtless cling better to the rough bark of a tree.

It belongs to the same natural order in which mock oranges are classed.

Virginia Creeper.

In Europe the Virginia creeper is used for many of the purposes for which we use the Japanese ivy, such as the covering of walls of buildings. The Japanese ivy is really the better vine with us, owing to its close growth to the wall. Every shoot clings tightly to the wall. This is not the case with the Virginia creeper. Every now and again a shoot will depart from its support and will droop gracefully. On some walls there is no objection to this; in fact, it adds to the general attraction of the vine; but on a wall of a dwelling it rarely adds to the appearance.

The Virginia creeper is handsome in Autumn when drooping from old trees, or when used for covering decaying ones, in which position it is sometimes seen. It has been suggested that, being a native vine, our people prefer to set the Japanese to their walls, as being more uncommon. But this is not the case. The latter is the better vine for the purpose, without doubt.

Both of these ampelopses grow readily either from green cuttings or from seeds. Seeds should be gathered in late Autumn, kept moist through the Winter, and sown early in Spring.

JOSEPH MEEHAN.

The Liberty Rose.

Editor Florists' Exchange:

A great many florists have the opinion that the Liberty is a hard rose to grow and is not very productive. We send you a photograph (reproduced) of our house of Liberty which to-day (June 19) is in full crop. This house is 300 feet in length and has three beds planted to Liberty; one of the beds is 3 feet wide, one 4 feet and one 5 feet, containing 3,579 square feet.

There are 1,951 grafted Liberty plants in this house and there have been sold from the first of October to the present time, 63,403 roses.

J. L. DILLON.

Bloomsburg, Pa.

Review of the Market

NEW YORK. The scarcity of flowers in this market is such as has not been known before for some years, and the conditions that prevailed but two weeks ago are entirely reversed. Then it was that the buyers could offer about what price they thought fit, and did purchase at figures that seemed unreasonably low. Now the tables are turned, buyers are clamoring after stock, and the wholesaler, with fond memories of the $5.00 per 1000 for roses which he had to accept at that time, calmly screws up the values and informs the protesting buyer that "everything comes to him who waits."

Commencement exercises have added new life to the retail trade this week, and, as there has also been a fair increase in the flower demand for weddings, the shortage of stock could not have occurred at a worse period for the retailers. Flowers most in demand have been red roses and sweet peas and for such of these as were of decent quality it has been possible to sell at any figure almost. American Beauty touched 40c. each, and Bride and Bridesmaid 10c. each.

Carnations, also, have sold well, and they were very poor flowers that did not fetch $2.50, or more, per 100.

Lily of the valley is scarce and in good demand. Longiflorum lilies are also selling well, some of the latter having been offered at as high as 10c. each.

There is a fair supply of Cattleya gigas quite enough to keep up with the demand.

Bunches of Crimson Rambler roses have been coming in, and have helped materially in filling up the gap in the supply of roses of this color. Gladiolus do not get plentiful at all, though the supply of iris remains steady. Adiantum Croweanum is selling at $1.00 per 100, and other varieties of maidenhair fern are proportionately lower, there being a pronounced lack of demand for all kinds of green stock.

In our last week's quotation column, the iris and lilies got transposed; the price of the former should have read $2.00 to $3.00, and the latter $3.00 to $8.00.

CHICAGO.—The market the present week has a firmer tone than it has had for some time, and better prices have been obtained for most all stock coming in. The supplies have fallen off somewhat. American Beauty are a scarce article in this market just now and the flowers seen are not of a very good quality. The price obtained for extra good stock is very good—as high as $4.00 per dozen the beginning of this week—but that is only for a very few. Other grades can be had for almost any price. Bride and Bridesmaid are not of very good quality from a great many growers, and, as a consequence, the price obtained for some of the stock is not satisfactory. Yet some consignors are sending in some extra fine stock, which realizes a very good figure. Bride, Bridesmaid, Meteor, Perles des Jardins and Golden Gate are all selling at from $3.00 to $6.00, and the inferior grades somewhat below these figures. Some extra good Liberty is seen, and going as well as American Beauty of the same length of stem. The price is $2.00 per dozen, while the other grades bring from $4.00 to $12.00 per 100.

Carnations of the better grades are not overplentiful, and are selling about the same as last week from $2.00 to $3.00 per 100; others at from 75c. to $1.50 per 100.

Cold storage peonies are in larger quantities than last week, and are selling at from $2.50 to $6.00 per 100, with a few of the extra fine at a little higher price.

Lilium candidum is more abundant and is realizing from $8.00 to $10.00 per 100. A limited number of L. elegans are seen in some of the store windows, but not enough to quote prices on them. L. longiflorum is selling at from $6.00 to $8.00 per 100, as are callas. Lily of the valley is in good demand, with enough to supply all calls for it. Sweet peas are in abundance and of very good quality, they sell well considering the large receipts, the price being from 25c. to 75c. per 100.

Common ferns are coming in in increasing quantities and, as a consequence, the price has dropped, they are now selling at $1.50 per 1000. Smilax and asparagus are in the same condition as last week.

R. J.

BOSTON.—Never at this season of the year were flowers so scarce as they have been for the past week, and at no time have such prices been realized in June. Everything, good or poor, sells on sight and at nearly any price the grower asks.

In roses, anything from $4.00 per 100 up to $12.00 are ruling figures for all but American Beauty, which are difficult to quote just now.

Outdoor stock has been pretty well ruined and flowers from inside, especially roses, are very poor. Conditions are extremely unsatisfactory to growers, wholesalers and retailers. F. J. N.

SAN FRANCISCO. Good roses are scarce, the very reverse being true regarding every other flower. Sweet peas are a glut in the market, bunches of 100 selling at retail for 20c. and less.

ALVIN.

ST. LOUIS. The cut flower market the past week was not as good as during the previous one; still there was a good demand for funeral work, a few wedding orders and some school work. The week's trade opened up weak. Plenty of cut flowers are in the market. All trains are again coming over the bridge, and the express companies are delivering the shipments on time. The trade suffered a great deal a week ago in not being able to obtain stock in time for early morning delivery. The weather is all that can be asked for, we are having very cool nights and no real hot days as yet.

The big Saengerfest held here last week helped trade a great deal as some very large bunches were given to the solo singers. The Liberal Art building was tastefully decorated for the occasion. The wholesalers expect from now on that their business will be of Summer dullness, and improvements, alterations and repainting will commence about July 1.

In cut flowers, roses of all kinds are very plentiful. Bride sold well last week at $2.00 and $5.00 per 100. Bridesmaid have been going to waste; there is little demand for them just now. Meteor and Liberty bring $4.00 and $5.00 for choice stock, while seconds sell at $2.00 and $3.00 per 100. Kaiserin Augusta Victoria sell at same price as Bride, and some good stock is in the market. Perle des Jardins are very soft, and that hurts their sale. With the exception of American Beauty there is hardly any fixed price on roses of second and third quality. Very few Beauty of the best quality can be obtained at present, $2.00 to $3.00 per dozen is asked for the best.

Piles of fancy sweet peas are lying around. Fancy varieties are being disposed of at $2.00 and $2.50 per 1000, 20c. to 35c. for a single hundred. Plenty of peas are sold every day, but the wholesalers say that it is impossible to dispose of the vast quantities thrown on the market. Most of these are grown in Kirkwood. The stock of Ude Bros., Pilcher and Gross is among the best.

Carnations, too, are suffering from lack of demand. Very little white stock goes to waste, but plenty of colored carnations are being dumped. The fancy sorts are about the only ones that sell well. The price for them is $2.00 and $3.00 per 100. Ordinary sorts are offered at $1.00 per 100.

White marguerites, hollyhocks, cornflowers, gladiolus and other out door flowers have very little demand and are disposed of at whatever figure the buyers will offer. Field daisies are also in now, going at 25c. per 100.

Lily of the valley holds its own at $3.00 and $4.00 per 100. A. Berdan of Kirkwood, is sending in the best. Mr. Berdan will make a specialty of growing lily of the valley the coming season.

Asparagus plumosus, smilax and A. Sprengeri are selling well owing to the shortage in fancy ferns. ST. P.

INDIANAPOLIS.—Weddings (quite a few of them) have been the life of the business during the past week. There have been several good-sized decorations at which large quantities of roses have been used, so these flowers are kept fairly cleaned up. Bride and Bridesmaid wholesale at 5c. to 6c. for No. 1 stock. Kaiserin Augusta Victoria are coming in in fine shape; they are not always obtainable, and wholesale at 6c. to 8c.; at retail, they bring 50c. to $2.00 per dozen. Liberty sell well, wholesaling at from 6c. to 18c.; retailing at $1.50 to $4.00 per dozen. American Beauty are small and unsatisfactory; wholesale price is 50c. to $3.00 per dozen; retail, $1.00 to $6.00 per dozen.

Carnations are over plentiful at $1.50 to $2.00 per 100. White ones are at times scarce and sell at a better figure than the colored ones.

A few days of rain have put sweet peas in a fine condition, and any quantity in almost any shade may be had at 25c. per 100. They are generally sold at retail at 10c. per bunch of twelve.

Both Harrisi and auratum lilies are to be had at $1.50 per dozen. I. B.

ST. PAUL. Trade has been fairly active all the month and is just beginning to feel the effects of warm weather. Commencement exercises of our schools the past week created a heavy demand for red roses, rather more than could be supplied. American Beauty have been in very good demand, with hardly enough in stock to meet requirements. Carnations have sold well but are getting smaller each week, so that retail prices have dropped to 50c. and 75c. per dozen. Nice peonies have been in good demand and meet with ready sales. Sweet peas are becoming more plentiful, but field grown stock is not yet in bloom.

The plant growers have had a good Spring business, but nearly all of them report considerable stock left on hand. Cannas were sold out clean early, and pansies have been in better demand than for several years past. But geraniums were grown in larger numbers than ever before and surpluses are found in many of the growers' hands at the end of the season. VERITAS.

ROCHESTER, N. Y. Owing to the recent rains crops of all kinds are looking as fair as can be expected considering the hard struggle plant life had during a seven week drouth. Both the wholesale and retail florists are exceptionally jubilant because of the break in the dry spell as it came at a time when watering plants in the field was getting to be quite a chore. Carnations especially are more than thankful, their plants in the field having become dried up almost entirely. Many plants that were cut down and frozen by the fierce wind and cold spell of May 1 are now showing but little effects of such treatment except perhaps being smaller than at this time in previous years.

Business among the store men is not over brisk at present.

Perennial stock has taken on a new aspect owing to the downpours of rain and all interested agree that business in this although perhaps later equals that of any former Spring sales and in many instances a smart increase is reported.

Carnation flowers are bringing fair price for this season considering the quality of stock, which is below the average. Good blooms are wholesaling at $1.00 per 100; the poor ones can be had for the asking. A. H. SECKER.

BALTIMORE. Trade is fairly good at this writing. Good white roses are in demand, the call being greater than the supply. Maman Cochet help out in funeral work. However, the quality and quantity of this variety are a little shy. Most all good stock is taken up as fast as it comes in. The poor material goes either to the street man or the garbage box. Carnations are arriving in quantities about equal to the demand excepting white, which are not plentiful, and go at $1.00 and $1.25 for standards. American Beauty are of rather poor quality, and in short supply. The best of them go at 10c. to 12c. J. J. P.

CINCINNATI. Business for June has been very satisfactory in all lines. Stock has been good for the time of year; and prices have held up well. Sweet peas are now coming in nicely and sell at 40c. per 100. Roses remain the same as formerly quoted; also carnations. Candytuft sells at three bunches for 25c.; gladiolus brings 4c. Greens are plentiful and always sell well. Lily of the valley realizes 4c. and is of fine quality. More good special stock could be disposed of if available. Stokesia cyanea (cornflower aster), sells at sight for $1.00 per 100. E. G. G.

BUFFALO.—This is commencement week at the leading public schools. Stock is called for early and active each day, and the moderate extent of blooms now available gets fully cleaned up. We now are having drizzly rains or showers almost daily, more than needed, while a real warm day has not as yet been recorded. Sweet peas of indoor growing are plentiful and nice. Some Lilium auratum blooms are seen, locally-grown, we understand. VIDI.

San Francisco.

News Notes.

At this month's meeting of the Pacific Coast Horticultural Society, preliminary plans were outlined for the mid-summer exhibit to be held in this city, date not fixed, to occur, it is thought, during the August encampment week of the 37th annual National rally of comrades of the G. A. R. The annual outing and family reunion of the society was fixed for July 12, at San Rafael Park.

Alex. Mann, Jr., who has been established in the trade nine years at 1441 Polk street, has also experienced within the last three years highly satisfactory business development as a greenery manufacturer and maker of cork bark pot covers, and as a wholesale dealer in florists' supplies. As a direct importer, Florist Mann received a few days ago 262 dozen willow baskets, said to be the largest direct importation ever consigned to a Pacific coast tradesman.

Mrs. Prentice, an Oakland florist, is having a glass house constructed on her store premises, 1155 Washington street, for carnation culture.

This week the California Nursery Company of Niles planted in the Palace Hotel court a substitute for the big $500 date palm, which died last week.

ALVIN.

NEWBURYPORT, MASS.—Edwin W. Pearson has purchased a lot recently belonging to the Jackman estate.

CANADIAN NEWS

Montreal.

Trade Notes.

In spite of the extraordinary dry weather prevailing this Spring, the bedding plant business has been very good, not less than 25 per cent. better than last year. Growers report their stock as being completely sold out, and at better prices than last season. Geraniums were very scarce, especially scarlet varieties. Large quantities of coleus were used, but cannas were not in very great demand. There are some growers who no doubt will not agree with these remarks, but they are few in number, and if they would not persist in growing three plants where they have only room for one they would be far better off in the end. There is also room for improvement in the selection of plants for propagating bedding stock.

Cut flowers continue to move freely, large quantities being used for funeral work and wedding decorations.

The recent copious rains have done a great deal of good to carnations and other stocks outdoors; and the country does not look very much the worse for the great drouth.

Club News.

A display of cut bloom and plants will be made in the club rooms at the regular meeting July 6. Members and friends are requested to send in their exhibits early.

The fourteenth annual picnic and games will be held at St. Rose, Friday, July 10. A special train will leave Place Viger Station at 9.30 a.m. Arrangements for the outing will be completed Thursday evening, 25th inst., when the committee will meet at Wilshire's store.

Visitor: J. Raymond Ball, Knowlton, Que. W. C. H.

The Galt Horticultural Society will hold its annual flower show on Wednesday, Thursday, and Friday, August 26, 27, and 28. The directors are getting the prize list ready. One of the features of this year's exhibition will be the entertainment given each evening of the show.

Paterson, N. J.

Joseph Towell is supplying the stores with some fine Iris Kaempferi grandiflora.

The street flower marketmen complained of dullness last week. A carnival for the benefit of the general hospital fund and a slack time in the silk manufacturing industry were no doubt the causes of the shortage of cash among purchasers.

Robert Smith, the Market street florist, has been away on a week's vacation to Pennsylvania towns.

The new Main street store occupied by Ed. Seeery has been finally completed and Seeery now has the finest outfit in town.

Verona, N. J.

Frank Goble has raised and disposed of over 10,000 geraniums this season. His stock has been of fine quality.

STERLING, ILL. Ernest Swartley and his sister, Miss Lillian, have gone East for a tour through Ohio. They will visit Dayton, Columbus, and Cincinnati, and expect to be absent from Sterling about two months.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.
WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective indoors or out for extermination of all plant pests. Boston.

Massachusetts Horticultural Society.

The rose and strawberry exhibition, which had been advanced one week from its scheduled time, was held at Horticultural Hall on Tuesday and Wednesday last. On the opening day the rose exhibits were not up to expectations, as far as quantity was concerned, but the quality of the flowers shown, mostly by Miss Sarah B. Fay, of Woods Hole, was very fine, considering the unfavorable weather. In the strawberry department, however, there was an excellent display. Miss Fay helped out the rather slim rose showing by bringing in another fine lot on Wednesday. Miss Fay won the first and second prizes under the Theodore Lyman Fund, as well as the first prize of the Society's premiums in every class in which they were awarded, and two second prizes. For Mme. Gabriel Luizet Peter B. Bradley was second; and for a display of 100 bottles of hardy roses Mrs. E. M. Gill won second.

Sweet williams were well shown in numerous varieties by William Whitman and W. E. Coburn, the former winning first and third prizes, while Mr. Coburn was awarded second. Arthur H. Fewkes tabled an interesting display of new peonies, and Mrs. E. M. Gill and the Blue Hill Nurseries showed vases of seasonable flowers.

A few plants were exhibited, though no plants were scheduled for this show. They added considerably to the general effect. Col. Charles Pfaff's odontoglossums and the display of gloxinias from Mrs. J. L. Gardner and that of orchids from W. A. Manda, Inc., were very interesting.

The regular Saturday weekly exhibitions begin July 11.

News of the Week.

The boys at the market learned with regret of the horrible death of Richard Haley, who had been a grower for years, with greenhouses at Malden. Mr. Haley closed up his greenhouses early in the Winter and since that time has been employed by the Hecla Iron Company of Everett. While working on a new building at 154 Devonshire street, Tuesday, he fell to the ground, sustaining fatal injuries. Deceased leaves a widow and four children.

A baseball team picked from the "boys" at the market are to play the Waban Rose Conservatories' team Saturday. James Denny is captain and manager, and would like to book dates throughout the season.

F. J. NORTON.

St. Paul.

The Week's News.

Martin J. Weppner, with The George Wittbold Company, Chicago, was a recent visitor.

Frank Berry of Stillwater, has gone to England for a visit to his old home, which he left 45 years ago.

L. L. May & Co are selling strawberries at their retail store. This is quite an innovation for a flower store, but as the berries are grown at Mayfield nursery, the grocers can hardly object to the firm selling their own products.

Dr. Schiffmann, our local orchidist, has returned from a six months' trip around the world, bringing one of the largest importation of orchids ever imported into the United States. In order to make room for the new plants he is offering established stock cheap.

VERITAS.

Utica, N Y.

Club News.

The regular meeting of the Utica Florists' Club for June was held at W. A. Rowland's, Whitesboro, N. Y. Whitesboro is a fine old town in the suburbs of Utica, about 3½ miles distant, reached by trolley, and we had a fine meeting and a good attendance.

We have decided for the Summer to hold our meetings at the different florists' places of business. Our next meeting will occur at Stewart Hakes, at Ilion, N. Y., on July 2, 14 miles east of Utica, also reached by trolley. A good crowd is expected.

Jottings.

Spring trade has been very good all around. While we have had a dry spell for the last week, it has now rained, and everything is looking fine. Carnation planting was late, but is, I think, all done now. Almost every florist has planted a good surplus of carnations. I saw at F. J. Baker's three houses planted in, and he said the plants were larger now than some he took in last Fall. At any rate, they are fine. He also showed me a large house of Asparagus plumosus, as fine as I ever saw. The plants were in 2¼-inch pots, about ready to ship.

W. P. Pfeiffer will build one house, 30 x 125 feet, for carnations this Summer. This flower is a specialty here, and he is cutting some fine blooms now and cannot fill all his orders.

C. F. Seitzer is so well pleased with the Pierson fern that he has ordered more of it. He is pretty well cleaned out of most kinds of bedding plants excepting verbenas. He will grow no more of these.

Wm. Mathews reports trade has been good. He had a large order for bedding plants for the Adirondack Mountains.

D. McLane was busy boxing plants for Richfield Spa. He has a good trade there.

Our vice-president, F. McGowan, is still cutting sweet peas by the bushel and says he is getting pretty tired gathering them day after day from morning till night.

I stopped off at Peter Crowe's to see the new plant building which he has leased to Messrs. Elwood and Harry S. Brant, nephews of L. M. Noe, Madison, N. J. It is nearing completion and when finished will contain some 35,000 feet of glass. Brant Bros. have also leased the houses which were erected two years ago by Mr. Crowe, containing 20,000 feet of glass. All the houses will be devoted to the growing of roses and Asparagus Sprengeri. The two establishments will contain over 25 000 rose plants besides several thousand asparagus plants. The range will be heated by steam generated by two large steam boilers of 70 horsepower each. The following roses are being planted: American Beauty, Liberty, Bride, Bridesmaid, and Golden Gate. This plant will be under the management of Harry S. Brant, while Elwood Brant will remain in New Jersey, where he has been in business for several years

Visitors: Messrs. Elwood Brant, Madison, N. J.; F. R. Pierson and John Fotheringham, Tarrytown, N. Y.; Wm. H. Kasting and wife, Buffalo; S. S. Skidelsky, Philadelphia, Pa.; John E. Hughes, Oneida, N. Y.

Cleveland.

Here and There.

Since my last report of dry weather we have been having plenty of rain; in fact, in some places too much. Carnations in the field are making a wonderful growth, and we all hope they will make good for the long spell of dry weather which retarded them in the early Spring.

The bedding season is about over now. Trade has been very good in this line, but prices have been no higher than in other years. Some growers have plenty of geraniums left over, the fault being that the plants were not in flower in time, or they could have been sold. Salvias seemed to sell better than usual this season, and all good plants have been cleared out for some time. Window boxes have been more plentiful this year, and most people are taking to them in preference to hanging baskets. This should be good news to the florists, as, I think, there is more money in boxes.

Our parks and boulevards are in the best of shape, and since the rains have come, the grass, trees and flower beds have shown great improvement. Since the azaleas and rhododendrons have passed, the Crimson Rambler roses are in their full glory, and are attracting great crowds. The Yucca filimentosa, of which there are several large beds in Gordon Park along the lake front, are just coming into flower, and will make a grand showing when in full bloom.

The planting of roses and chrysanthemums in houses is well under way, and the next two weeks will see most of them planted.

H. P. Brush, representing the Chadborn Ventilating Company of Buffalo, was a recent caller, having just returned from a trip through the West. He reports business as very good in his line.

Trade has been very active all this month, and the usual Spring glut has not affected us nearly as much this year as formerly.

Smith's, of Wade Park avenue, are still cutting plenty of their new carnation Magdalene, and the stock is meeting with a ready sale. The plants in the field never were better, as they were watered all through the dry spell.

G. W. S.

Cincinnati.

Election of Officers.

At a meeting of the board of directors of the Cincinnati Florists' Society, the following officers were elected for the ensuing year: President, C. J. Ohmer; vice-president, William Schuman; secretary, George Murphy; treasurer, Louis Kyrk; general overseer, Ben George. The date fixed for the annual outing of the florists of Cincinnati is July 23, and the place for holding same Coney Island. Prizes will be offered for bowling and ball games. The ladies will also have a bowling contest. The Cincinnati florists extend an invitation to all of the craft who can to join them upon this occasion.

Don't forget the next regular meeting, which will be held at D. Rusconi's residence at Covington, Ky., near the end of the Suspension Bridge, on July 9.

Jottings.

We had the pleasure of a call last Monday from C. W. Ward, of Queens, N. Y., on his way to the Virginia coal fields, where he has business interests. The writer, with Mr. Ward, visited Eden Park. The crotons in one of the Park greenhouses are very fine; and the new showhouse is quite attractive. The bedding as seen below the greenhouses is showing up nicely. Superintendent Critchell has made a wonderful improvement in our park system since he took hold. Unfortunately Cincinnati's park fund is very small in comparison with that of the other large cities of the United States, less than $45,000 being appropriated yearly to maintain the parks.

The C. H. & D. R. R. has been chosen as the official road from this city to Milwaukee. The rate is based on the certificate plan—$14.10 for the round trip, $2.00 each way for sleeper. A stop-over privilege will be allowed, returning, at Chicago. The Cincinnati delegation will join the Chicago delegates on the way up to Milwaukee, provided we receive an invitation to so do.

E. G. GILLETT.

Indianapolis, Ind.

The Week's News.

Indianapolis florists are being imposed upon by some of the Chicago wholesalers. Roses are being shipped to retail customers in this city at wholesale prices. For instance, a prominent lady received four hundred good Bridesmaid at $3.50 per 100 from a Chicago wholesaler. This unscrupulous business ought to be stopped, and certainly it will be well advertised among the dealers here who trade with Chicago.

Tomlinson Hall market business has been quiet. John Heidenreich is cutting immense quantities of sweet peas, a great many of them being new varieties.

Berterman Bros. Company were very busy the 24th inst. with four wedding decorations.

I. B.

Baltimore.

Gardeners' Club News.

At a meeting of the Gardeners' Club held Monday night a committee was appointed to recommend some needed changes in the constitution and by-laws and present their views at the next regular meeting.

Jacob Keplinger, gardener to Mr. William Lanahan, has invited the club to an outing July 9, from 4 to 8 p.m., to be held at Mr. Lanahan's country place, "Blenheim." The invitation has been accepted, and Mr. Keplinger promises a royal good time.

The president of the club, R. Vincent, Jr., and his wife, sailed from New York Tuesday for an extended trip through Europe. The club and the trade in general wish them a safe and pleasant journey.

J. J. Perry has sold his store at Gay and Eager streets to William F. Keys, who will run the business in connection with his Saratoga street store.

JOHN J. PERRY.

Buffalo.

News Jottings.

Charles Hewson, of Abbott Road, is the only local craftsman attaining the distinction of owning an auto, which he claims is well adapted for his business needs, while gaining much pleasure therefrom as well.

J. B. Weise, of Washington Market, sports a new delivery wagon of approved pattern and finish.

S. A. Anderson is serving on the County Court Jury for a two weeks' period.

Christ Bartz, who for some time past has been traveling as salesman for W. F. Kasting, is home for a spell, during which he will occupy a position at Crystal Beach, a local Summer resort.

A. N. Pierson, of Cromwell, Conn., visited his nephew, S. A. Anderson, over Sunday last. C. H. Joosten, of New York, was also a caller, and S. S. Skidelsky was about on Tuesday of this week.

VIDI.

Minneapolis.

An incentive to sweet pea growing is being offered by the leading florists and seedsmen of Minneapolis in the shape of a sweet pea and annual flower raising contest. The show will be held on the second floor of the Dayton block, 710 Nicollet avenue, early in August. It is hoped to secure a showing of annuals which will do credit to the Flour City. Such flowers as sweet peas, asters, dahlias, nasturtiums, carnations, marguerites, verbenas and gladiolus will be entered in the contest. Liberal premiums will be offered on the best arrangement and the best bouquets. Prizes will also be offered to the school children who have received seed from the Minneapolis Import League.

It has been decided to donate 10 per cent. of the door receipts to the Minneapolis Outing Association, so that poor boys and girls who work in the factories may be benefited by the recreation offered by this organization.

"THRIPSCIDE"

(REGISTERED)

GREENHOUSE FUMIGATING POWDER

is the newest and best article on the market today for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows.

1 lb. Tin Can ...	$0.25	25 lb. Sealed Box	$4.50
5 " " ...	1.00	100 " " "	16.50

A DIAMOND MINE

IT GETS THERE EVERY TIME.

The Midget greenhouse for raising seedlings, small plants and delicate ferns. Frames of vegetable fibre, waterproof, glazed with our new patent Flexible Glass, unbreakable, perfectly transparent, colorless and unchanged by climatic influences.

The Midget folds like a map into a space 12x9x1¼ inches; weighs only 12 ozs. Can be shipped by mail or express. Price No. 1 (dimensions 12x9x9 inches), $2.50. Waterproof paper for wrapping roots of plants, cuttings and lining cut-flower boxes. Much superior to wax paper. Can also be used to cover hot beds, cold frames, and even flower beds from expected frosts. Also coated cloth for last mentioned purposes. Full particulars on application.

Newport, R. I.

The Newport Horticultural Society held its Summer show June 23 and 24. Considering the unpropitious weather the displays were very fine, especially of roses. Most of the exhibits were made by local gardeners. Lager & Hurrell, Summit, N. J., had on exhibition a fine collection of orchids, including some very fine types of Cattleya gigas. The exhibit was awarded a silver medal. M. H. Walsh, of Woods Hole, Mass., made a very fine showing of named roses, among which were Debutante and Sweetheart. The baskets made up by the gardeners' assistants were exceedingly fine. For best basket of flowers, other than roses, open to gardeners' assistants only, the first prize was won by Richard Menham, assistant to Bruce Butterton at E. J. Berwind's; second, S. Williams, assistant to J. Marshall at Perry Belmont's. Best corsage bouquet, open to gardeners' assistants only--First prize, Richard Menham; second, S. Williams.

The judges, Messrs. George F. Struck, of Summit, N. J.; Kenneth Finlayson, of Brookline, Mass., and Peter Murray, of Fair Haven, Mass., conscientiously performed their arduous duties.

The Norwalks, Conn.

For the past two weeks the florists in the Norwalks have been very busy, many weddings and the graduating exercises at the several ladies' seminaries creating a very lively demand for flowers and the use of decorative plants.

Rain has fallen almost incessantly for the past fortnight, and the drouth is forgotten. The carnations in the field look exceptionally well.

H. M. Woundy, of New Canaan, was in town the other day, and reports the best Spring trade in several years. He waited until the rain came before planting his carnations—about 20,000.

E. R. Sherwood is cutting 5,000 carnations per week and is getting tip-top prices for them. He planted about 15,000 in the field last week.

A new carnation house will soon be added to the plant of R. G. Hanford. The house will be of the most modern type, 140 feet long by 20 feet wide, and will be heated with hot water. A Lord & Burnham sectional boiler will be installed, which will also heat one or more of the other houses, and two small boilers will be discarded.

Last Sunday was Children's Day at the Congregational Church, and each child was presented with a flowering plant on leaving the service. P.

FOLEY CAST IRON GUTTER

This cut is not full size. We make two sizes: 2⅞x5 inches and 2⅞x6⅛ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not [illegible]. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old-style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

BED OF EVERGREENS—BACKGROUND OF PIN OAKS

The bed contains but one variety—Retinospora plumosa—with a setting of Ivy. Taking into consideration the position of the bed, and the appropriateness of the background, the picture is one all can admire for its beauty and its lessons.
